List of Figures

Part-A

2.1 Map showing sample locations in the eastern Arabian sea 8

2.2 Flow chart of the analytical procedure for the determination of U, Th, Po and Pb nuclides 11

3.1 ^{137}Cs depth profile in the sediment core J-7 18

3.2 Concentration–depth profiles of $^{210}Pb_{excess}$ in the WCMI sediments 20

3.3 $CaCO_3$ depth profiles for the WCMI sediments 27

3.4 Scatter diagram of $^{210}Pb_{excess}$ inventory vs. rate of sediment accumulation 31

3.5 Mn cycling from the upper slope sediments 36

3.6 Downcore variations of Mn in WCMI sediments 37

3.7 Downcore variations of U/Th weight ratio 42

Part–B

5.1 Map showing location of samples collected from reservoirs in and around the Sambhar lake 63

6.1 Scatter diagram of Σcations and Σanions for water samples from the Sambhar lake area 70

7.1 Scatter diagram of $\delta^{18}O$ vs. TDS for the Sambhar lake groundwaters . . . 76

7.2 Scatter diagram of $\delta^{18}O$ vs. TDS in the Sambhar lake and sub-surface brines 78

7.3 Evolution of $\delta^{18}O$ in evaporating lake waters based on the Rayleigh fractionation model 80

7.4 Evolution of $\delta^{18}O$ in the Sambhar lake water based on the Craig-Gordon model 80

7.5 $\delta^{18}O$ vs. TDS in an evaporating pan 82

7.6 The relation between alkalinity and Ca or (Ca+Mg) in ground and river waters of the Sambhar lake area 87

7.7 Hardie-Eugster model based chemical evolution of brine from the evaporation of the Sierra Nevada Spring water 89

7.8 Model predicted and experimental results for the evolution of the Sambhar lake brine during the annual evaporation cycle 91

7.9a The chemical evolution of brine resulting from the evaporation of the Roopangarh river water based on the Hardie-Eugster model 93

7.9b The chemical evolution of brine resulting from the evaporation of the Mendha river water based on the Hardie-Eugster model 94

7.10 Variation in the abundance of Na as a function of chloride during evaporation of the lake and pan waters 96

7.11 Relation between (i) U and TDS and (ii) reciprocal of U and $^{234}U/^{238}U$ activity ratio for the Sambhar lake groundwaters 102

7.12 Scatter diagrams of U vs. Cl and U vs. Alkalinity in the Sambhar lake . . 103

7.13 The relation between uranium abundance and salt content during the annual evaporation of the Sambhar lake water 105

7.14 Relationships between ^{226}Ra abundance and TDS, and between ^{226}Ra and ^{228}Ra isotopes in various water bodies from the Sambhar lake area 108
