ACKNOWLEDGEMENT

My association with Dr. Laxmipriya Nampoothiri goes back a long way. As my M.Sc. dissertation project guide, she showed belief in me and agreed to guide me further for my Ph.D. For this, I will remain indebted to her. Among the foremost things to learn from her have been her management of time and the habit of being punctual. This shall surely help us, as students, at every phase in our personal and professional lives. The constant support and backing given by her during the course of my Ph.D. was one of the driving forces for me.

I would like to thank Prof. Sarita Gupta, Head Biochemistry department for providing all the necessary support and access to the instrumentation facility, which has been most crucial for the completion of work on time and with ease.

All the doctoral committee members – Prof. Sarita Gupta, Prof. G. Naresh Kumar, Dr. Prakash Pillai and all the faculty members at the department of biochemistry for their continuous evaluation of my work and their critical comments and suggestions, which helped me shape my work in a better way.

The journey of Ph.D. would have been rather dull without a great work environment and I have my colleagues to thank for this. Working in LPL was undoubtedly enjoyable and the place holds fond memories. Radha didi had been always a great support from whom I learnt many things from animal dissection to instrument handling. Thank you for being so kind and supportive. Arpi for her continued moral support and for making the place lively! All the dissertation students of the lab, who in some or the other way helped my work progress and also made working in the lab joyful. Shivani for having weighed all the APS for all my western blots, and of course, for being a wonderful junior!

Mitali, Anita and Apoorva, the dissertation students who have contributed substantially to this work. It was great working with you girls!

Animal experimentation is all about practical skill. Rameshhai, Vijaybhai, and Narayanbhai have always made my work easy by helping me in rat handling and maintenance. Thank you so much for a humane touch to the animal house and making it a lively place. I will sincerely miss working in the animal house the most.

The office staff at Biochemistry department office staff for always supporting whenever I needed their help.

My immediate seniors Sumit and Ashish, thank you for guiding me during the initial years of Ph.D. It was a pleasure working with you.

Animal behavior experiments wouldn't have been possible without the right apparatus. My most sincere thanks to Jaimin Patel, who, in spite of his busy schedule, always manages to find time to help me whenever needed. He personally got the apparatus prepared in a very

short time and made the behavior experiments possible. Also, Urja Verma and Pranav, Zoology department for lending the camera and tripod used for all the behavior recordings. Pranav for analyzing the data of behavior experiments.

A very special thanks to Prof. Rakesh Tyagi, Prof. D M Stocco and Dr. Anilkumar Pillai for gifting the antibodies of AR, StAR, and estrogen receptors. Prakash sir for providing primers for BDNF and TrkB.

Jatin Macchi, faculty of Pharmacy, MSU for helping in a big way with all my neurotransmitter estimations.

Prof. B. Suresh for the photomicrographs of ovarian histology and for all the care and concern which has always motivated me.

Charola, Jeetu, Ashish, Pranav and my other 9/11 batchmates for all the troubleshooting and scientific and non-scientific discussions which made life interesting! Special thanks to Shashwat and Aishwarya for being there through thick and thin.

Some of the real-time experiments would have been a puzzle largely unsolved without the help of Laxmi di and Mala! Thank you for helping me out with the calculations.

Milton and Kritarth for all the troubleshooting when it came to the stubborn western blots.

DBT-MSUB-ILSPARE facility and Dr. T Bagachi, former head of the Microbiology department for providing the real-time PCR instrument facility.

DBT, Govt. of India for financial support in the form of research fellowship.

All the research scholars of the biochemistry department.

I dedicate this thesis to my family members who have constantly motivated me and kept my spirits high. Thank you so much for all the patience and love and for putting up with my odd work hours. The undying positivity of my mom and the ability of my dad to relentlessly work hard have been the inspiring forces that often pulled me out from failures. Harshil has always been special in his own way and I owe a lot to him. My in-laws for all the love and support and for believing in me. Their understanding nature helped a great deal in the completion of this thesis. Chinmay bhai for the idea of this thesis cover!

Pranav, without you this thesis would have been a far more difficult task to complete than it already was. From my Ph.D. registration right through thesis submission, experimental design to discussion of results, you have always been there to listen and to help with suggestions.

A sincere thanks to all those who were knowingly or unknowingly involved in this piece of work and who made it possible.

Nirja Kashyapbhai Chaudhari
