Abstract ix

1 Introduction 1

1.1 Earth's interior and composition . . . 1
1.2 Earth-The hydrous planet . . . 3
1.3 Hydrous minerals . . . 5
1.4 Hydrogen bond symmetrization . . . 6
1.5 Stability of mineral phases . . . 7
1.6 Combination of DFT and XRD studies for geological materials . . . 10
1.7 Outline of the thesis . . . 11

2 Methodology 14

2.1 Introduction . . . 14
2.2 Computational Methods . . . 15
2.2.1 Density functional theory . . . 15
2.2.2 Solving Kohn-Sham equations . . . 19
2.2.2.1 Self-consistent field method . . . 19
2.2.2.2 Plane waves . . . 19
2.2.2.3 Pseudopotential . . . 20
2.2.2.4 k-point sampling . . . 21
2.2.2.5 Kinetic energy cut-off . . . 22
2.2.3 Structural properties . . . 22
2.2.3.1 Geometry relaxation . . . 22
2.2.3.2 Geometry optimization . . . 23
2.2.4 Vibrational and Mechanical properties . . . 23
2.2.4.1 Phonons . . . 23
2.2.4.2 Raman Spectrum . . . 27

2.2.4.3 Elastic constants 27
2.3 Experimental Methods 29
2.3.1 X-ray diffraction 29
2.3.2 Synchrotron X-ray diffraction 31
2.3.3 The working of diamond anvil cell 32

3 Hydrogen bond symmetrization in δ-AlOOH 34
3.1 Introduction 34
3.2 Methodology 37
3.3 Results and discussion 37
3.3.1 Structural properties 37
3.3.2 Elastic properties 42
3.3.3 Vibrational properties 44
3.4 Geophysical implications 48
3.5 Conclusions 49

4 Hydrogen order-disorder transition in metal (II) hydroxides 51
4.1 Introduction 51
4.2 Methodology 53
4.2.1 Computational methods 53
4.2.2 Experimental methods 54
4.3 Brucite under volume perturbation 55
4.3.1 Results and Discussion 58
4.4 Hydrogen order-disorder transition in β-$Co(OH)_2$ 70
4.4.1 Results and Discussion 71
4.5 Hydrogen order-disorder transition in β-$Ni(OH)_2$ 77
4.5.1 Results and Discussion 78
4.6 Conclusions 84

5 Stability limit of high-pressure monoclinic phase of Lawsonite 87
5.1 Introduction 87
5.2 Methodology 90
5.3 Results and Discussion 90
5.4 Conclusions 101

6 Summary 103
6.1 Future scope 106

Bibliography 108
