CONTENTS

Introduction 1

1. A quantitative study of the distribution pattern of succinic dehydrogenase in the *pectoralis major* muscle of the pigeon 8

2. Histochemical observations on the succinic dehydrogenase and cytochrome oxidase activity in pigeon breast muscle 18

3. A quantitative study of the distribution pattern of iron and protein in the red and white fibres of the pigeon breast muscle 37

4. A quantitative study of the distribution pattern of certain oxidizing enzymes and a lipase in the red and white fibres of the pigeon breast muscle 46

5. Histochemical demonstration of certain DPN-linked dehydrogenases and aldolase in the red and white fibres of the pigeon breast muscle 59

6. Histochemical demonstration of certain oxidizing enzymes in the *pectoralis major* muscle of the rosy pastor (*Pastor roseus*), goose (*Anser albifrons*) and fowl (*Gallus domesticus*) 68

7. The succinic dehydrogenase levels of the pectoral muscles of a few representative types of birds and a bat in relation to the fibre diameter, muscle weight and body weight 75

8. Lipase and succinic dehydrogenase activity of the particulate fractions of the pigeon breast muscle homogenate 84

9. An *in vitro* study of the oxidation of triglycerides by the pigeon breast muscle mitochondria and whole homogenate 94

Summary and Conclusions 101
