Contents

Chapter-1 Introduction **[1-58]**

Chapter- 2 Synthesis and Characterization of, MCM-41, 12 -tungstophosphoricacid and 12-tungstosilicicacid anchored to MCM-41 **[59-113]**

- Introduction
- Synthesis of MCM-41
- Synthesis of anchored catalysts
- Characterization
  - Chemical Stability
  - Leaching test
  - Elemental Analysis
  - Thermo Gravimetric Analysis
  - Fourier Transform Infrared Spectroscopy
  - Laser Raman spectroscopy
  - Diffuse Reflectance Spectra
  - Solid state MAS-NMR (^{31}P & ^{29}Si)
  - Powder X-Ray Diffraction (XRD)
  - BET Measurement
  - Scanning Electron Microscopy (SEM)
  - Transmission Electron Microscopy (TEM)
  - Acidity measurement
- Synthesis of Pore expanded MCM-41
- Synthesis of anchored catalyst
- **Conclusion**

Chapter -3Catalytic activity of 12 -tungstophosphoricacid and 12-tungstosilicicacid anchored to MCM-41 **[114-158]**

- **Esterification**

(a) Esterification of dicarboxylic acid (Succinic acid and Malonic acid) **[114-134]**

  - Introduction
  - Optimization of various reaction parameters
  - Regeneration and Recycling of the catalyst
  - Characterization of Regenerated Catalysts
  - Catalytic activity of Regenerated Catalysts

- **Conclusion**

(b) Esterification of fatty acid (Lauric acid with butanol) **[135-158]**

  - Introduction
  - Optimization of various reaction parameters
  - Regeneration and Recycling of the catalyst
  - Characterization of Regenerated Catalysts
  - Catalytic activity of Regenerated Catalysts
  - Kinetics studies
  - Determination of order of reaction and activation energy

- **Conclusion**
- **Effect of heteropolyanion (Effect of heteroatom)**
- **Effect of Support pore diameter (Pore Expanded MCM-41)**
- **Conclusion**

Chapter -4 Applications of 12 -tungstophosphoricacid and 12-tungstosilicicacid anchored to MCM-41 in Biodiesel production **[159-214]**

(a) Esterification of free fatty acids (palmitic acid and oleic acid) **[159-186]**

- Introduction
- Optimization of various reaction parameters
- Regeneration and Recycling of the catalyst
- Characterization of Regenerated Catalysts
- Catalytic activity of Regenerated Catalysts
- Kinetics studies
- Determination of order of reaction and activation energy

- **Conclusion**

(b) Transesterification of triglyceride (Jatropha oil and Waste cooking oil) **[187-214]**

- Introduction
- Optimization of various reaction parameters
- Regeneration and Recycling of the catalyst
- Characterization of Regenerated Catalysts
- Catalytic activity of Regenerated Catalysts

- **Conclusion**
- **Effect of heteropolyanion (Effect of heteroatom)**
- **Effect of Support pore diameter (Pore Expanded MCM-41)**
- **Conclusion**

Chapter -5 **[215-295]**

Chapter -5A Synthesis and Characterization of SBA-15 and 12-tungstophosphoric acid anchored to SBA-15 **[215-242]**

- Introduction
- Synthesis of SBA-15
- Synthesis of anchored catalysts
- Characterization
  - Chemical Stability
  - Leaching test
  - Elemental Analysis
  - Thermo Gravimetric Analysis
  - Fourier Transform Infrared Spectroscopy
  - Laser Raman spectroscopy
  - Diffuse Reflectance Spectra
  - Solid state MAS-NMR (^{31}P & ^{29}Si)
  - Powder X-Ray Diffraction (XRD)
  - BET Measurement
  - Scanning Electron Microscopy (SEM)
  - Transmission Electron Microscopy (TEM)
  - Acidity measurement

- **Conclusion**

Chapter -5B Catalytic activity of 12 -tungstophosphoricacid anchored to SBA-15 **[243-295]**

I. **Esterification**

II. **Application in Biodiesel production**

- **Effect of Supports on catalytic activity of 12-tungstophosphoric acid**
- **Conclusion**

Novelty of the work
