LIST OF FIGURES

Figure no.	TITLE	Page no.

Figure 1. Modalities of Cell Death 28
Figure 2. Death receptor apoptosis signaling. 28
Figure 3. Binding of caspase-8 and cFLIP to FADD at DISC..... 30
Figure 4. cFLIP in regulation of Autophagy. 31
Figure 5. Different isoforms of cFLIP in Human. 31
Figure 6. Involvement of FADD and cFLIP in regulation of Apoptosis and Autophagy...32
Figure 7. Multiple role of FADD in regulation of cellular signaling..... 34
Figure 8. Structural organization of human FADD. 34
Figure 9. The three-Dimensional structure of human FADD..... 35
Figure 10. The conserved sequence of DED in FADD, cFLIP and pro-capsase-8..... 36
Figure 11. The orthologs of FADD in human, mouse and Xenopus..... 37
Figure 12 Cytosolic and nuclear sub cellular localization of human FADD..... 38
Figure 13. TNFR1 signaling.. 41
Figure 14. The TRAIL signaling of apoptosis..... 42
Figure 15. Interaction of FADD and RIP determines fate of cell death and survival signaling. 44
Figure 16. Role of FADD in autophagy. 45
Figure 17. Role of FADD in Necroptosis. 47
Figure 18. Role of FADD in inflammatory signaling.. 49
Figure 19. Expression of FADD and $cFLIP_L$. 71
Figure 20. Overexpression of pEYFP-FADD..... 72
Figure 21. Induced expression of FADD attenuates expression of $cFLIP_L$ and activates cascades of extrinsic caspases..... 73
Figure 22. FADD potentiates CD95L induced apoptosis. 75
Figure 23. Analysis of FADD, $cFLIP_L$ and pro-caspases-8 binding at DISC..... 76
Figure 24. FADD and $cFLIP_L$ balances mitochondrial integrity. 78
Figure 25. FADD and cFLIP in regulation of cell viability. 79
Figure 26. FADD and $cFLIP_L$ expression commences apoptotic cell death..... 80
Figure 27. Selective knockdown of $cFLIP_L$ augments cell death. 81
Figure 28. Transient silencing of $cFLIP_L$ challenges mitochondrial integrity..... 82
Figure 29. Knockdown of $cFLIP_L$ augments cell death, independent of TNF-α stimulation.. 83

Figure no.	TITLE	Page no.

Figure 30. Knockdown of $cFLIP_L$ induces apoptosis, independent of TNF-α stimulation.84

Figure 31. TNF-α stimulation to HKE 293T cells.....85

Figure 32. FADD augments cell death in TNF-α stimulated cells. 86

Figure 33. FADD augments downstream apoptosis signaling in TNF-α stimulated cells.86

Figure 34. Induced expression of FADD inhibits NF-κB activation, independent of TNF-α stimulation. 88

Figure 35. FADD ubiquitinate IKKβ. 89

Figure 36. Knockdown of $cFLIP_L$ mitigates NF-κB activation. 90

Figure 37. Mutation of specific amino acids in the FADD and $cFLIP_L$ modulates NF-κB activity. 91

Figure 38. FADD abrogates cIAP2 expression and interacts with RIP1 and procaspases-8. 92

Figure 39. FADD protects RIP1 integrity. 93

Figure 40. *In silico* molecular docking between death domains (DD) of FADD and RIP1.94

Figure 41. FADD and $cFLIP_L$ synergistically regulates NF-κB signaling. 95

Figure 42. Knockdown of $cFLIP_L$ facilitates RIP1-FADD complex formation. 96

Figure 43. FADD augments apoptotic death rather than necropotosis in TNF-α stimulated cells. 96

Figure 44. FADD triggers JNK1 mediate ubiquitination of $cFLIP_L$.....97

Figure 45. FADD and $cFLIP_L$ regulates oxidative stress and JNK1 expression.....98

Figure 46. FADD triggers JNK1 mediate ubiquitination of $cFLIP_L$ in the presence of TNF-α. 99

Figure 47. Knockdown of $cFLIP_L$ triggers ROS generation and JNK1 activation. 100

Figure 48. FADD and $cFLIP_L$ regulates autophagy signaling.....102

Figure 49. Ectopic expression of $cFLIP_L$ suppresses rapamycin induced autophagy...103

Figure 50. Induced expression of $cFLIP_L$ suppresses rapamycin induced cell death. .103

Figure 51. Expression of $cFLIP_L$ balances Bcl-2 interaction with Beclin-1. 104

Figure 52. Knockdown of $cFLIP_L$ ($cFLIP_L^{KD}$) and re-expression of $cFLIP_L$ in $cFLIP_L^{KD}$ cells. 105

Figure 53. $cFLIP_L$ maintains cell viability. 106

Figure 54. Depletion of $cFLIP_L$ imbalances autophagic equilibrium. 107

Figure 55. $cFLIP_L$ stabilizes the interaction of Beclin-1 with Bcl-2.....108

Figure 56. $cFLIP_L$ mitigates oxidative stress and restore interaction of Beclin-1 with Bcl-2. 109

Figure no.	TITLE	Page no.

Figure 57. Knockdown of $cFLIP_L$ induces p53 dependent ubiquitination of Beclin-1. 110
Figure 58. Knockdown of $cFLIP_L$ mitigates TNF-α response for cell survival. 111
Figure 59. Knockdown of $cFLIP_L$ induces p53 dependent ubiquitination of Beclin-1. 112
Figure 60. FADD regulates proIL-1β 114
Figure 61. FADD supresses Inflamasome activation. 115
Figure 62. Isolation of total RNA and cDNA synthesis. 116
Figure 63. Cloning of human FADD. 117
Figure 64. Expression of pET-FADD in *E. coli* BL21 (*DE3*)-pLys cells 118
Figure 65. Purification of His tagged human FADD (hFADD). 119
Figure 66. Characterization of purified FADD. 121
Figure 67. Mass determination of purified FADD by MALDI-TOF mass spectrometry. 121
Figure 68. Intrinsic fluorescence spectrum. 122
Figure 69. FT-IR analysis of CP-FADD 123
Figure 70. Cellular localization of CP-FADD inside the cells 124
Figure 71. Apoptotic potential of CP-FADD. 125
Figure 72. Anti-inflammatory potential of CP-FADD. 126
Figure 73. Comparative analysis of CP-FADD with conventional apoptotic inducers. 127

LIST OF TABLES

Table no.	TITLE	Page no.

Table 1. RT-qPCR primers. Following primers were used in this study. 61
Table 2. Quantitative estimation of RNA and cDNA. 116
Table 3. Quantification of RE digested insert and vector. 117
Table 4. IPTG dose standardization and induction profile. 118
Table 5. Purification yield of human FADD (hFADD) protein. 119
Table 6. Preliminary quantification of purified hFADD. 120
Table 7. Quantitative analysis of CP-FADD. 122
