ACKNOWLEDGEMENTS

I express my deep gratitude to Dr. L. S. Chamyal, Department of Geology, M. S. University of Baroda, Vadodara for encouragement, guidance and support that is largely responsible for the completion of this study.

I am grateful to the Head. Department of Geology, M. S. University of Baroda for providing departmental facilities and support. I am indebted to the Director, PRL, for allowing me to register for Ph.D as an external candidate and sanctioning adequate leave for this research work.

I sincerely owe my learning of landforms and their climatic significance to Gurudev (Dr. R. K. Pant), it was an experience to work with him in areas from sea coast to the Himalaya. The uninterrupted support of Prof A. K. Singhvi- my Luminescence guru is duly acknowledged, without his support this study would not have been possible. Prof. S. Krishnaswami's critical comments blended with essence of encouragement helped in improving the understanding on the subject.

Dr N. Basavaiah is thanked for magnetic measurements. Dr M. G. Yadava for providing radiocarbon ages and Ravi Bhushan for organic carbon assays on dune sand. Shashi Kiran Ganesh and R. D. Deshpande spared their valuable time to read the manuscript and provided valuable inputs. The present form of thesis is achieved by the untiring help of Dr. Rachna Raj, Dr. D. M. Maurya, Subhash Bhandari and Naresh Mulchandani. I sincerely thank their support.

I thank Late Sri Pan Singh of Lata village a mountaineer by birth, who assisted me in locating the relict lake deposits at Goting.

Finally, it was Preeti without her support it was just not possible for me to complete this study. I sincerely thank her for all she did for me.

Navin C. Juyal
