List of Tables

Table 1: Diversity of grapsid and sesarmid crabs in mangroves

Table 2: Marine crustacean fauna of India

Table 3: Seasonal variation in the mean values of different abiotic factors of sea water at different stations

Table 4: Seasonal variation in the mean values of different abiotic factors of sediment at different stations

Table 5: Results of the Two – way ANOVA without replication analysis of the mean seasonal density, abundance and frequency values of *O. ceratophthalma* burrows sampled at three different sites (* $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$).

Table 6: Results of the regression and correlation coefficient analysis between mean seasonal abundance of *O. ceratophthalma* and mean sediment temperature, salinity and pH (** $p < 0.01$; *** $p < 0.001$).

Table 7: Results of the Two way ANOVA without replication seasonal density, abundance and frequency of occurrence values of different gastropod species studied at different sites (* $p<0.05$; ** $p<0.01$).

Table 8: Results of the regression and correlation coefficient analysis between mean seasonal abundance of different gastropod species studied and mean sea water salinity, temperature and pH recorded at different study sites.

Table 9: Results of the Two way ANOVA without replication analysis of the mean seasonal density, abundance and frequency values of the three species of zoanthids sampled at four different sites (* $p<0.05$; ** $p<0.01$).

Table10: Results of the regression and correlation coefficient analysis between mean seasonal abundance of zoanthid species and mean sea water

temperature, salinity and pH at different study sites (* $p<0.05$; ** $p<0.01$).

Table 11: Brachyuran crab diversity at different study sites.

Table 12: Brachyuran crab diversity of different intertidal zones.

Table13: Microhabitat preference of brachyuran crabs(STA- Shallow tide Pool with algal assemblage, STP- Shallow tide pool with *Palythoa*, STZ- Shallow tide pool with *Zoanthus,* DTP- Deep tide pool, RC- Rock crevices, UR- Under rock, DP- Deep water)

Table 14: Burrow features indicative of certain trophic requirements of the inhabitant. Adapted from Nickel and Atkinson (1995).

Table 15: The variation in burrow cast numbers in sample, crab carapace width, burrows depth, burrow inclination, burrow volume, and total length of burrow for various shapes of burrow cast. (Single tube burrow (ST), J shape with branch at the base (JBB), J shape (J), Bulb shape, Y shape burrow (Y shape), Multi branched burrow (MB), Y shape with double opening (YDO), U shape burrow (U).
