Abstract VI

1. Chapter 1: Introduction 01

2. Chapter 2 : Materials and Methodology .....

2.1. Neural stem cells culture: Neurosphere generation 17
2.2. Glial cells: isolation and culture 18
2.3. Myelinating Spinal Cord Culture 19
2.4. Animal ethical approval 21
2.5. Immunocytochemistry (ICC) 21
2.6. Polymerase chain reaction (PCR) 23
2.7. SDS-PAGE and Western Blotting 24
2.8. Cell viability assay (MTT Assay) 25
2.9. Cell proliferation assay (BrdU Assay) 25
2.10. Cell migration assay (Scratch assay) 26
2.11. NSC Differentiation Assay 26
2.12. Morphometric analysis of Neurosphere 26
2.13. Myelin extraction 27
2.14. Cell Treatments 28
2.15. Statistical Analysis 30

3. Chapter 3: To determine the role of BDNF, NGF and their receptors in the regulation of Neural Stem Cell differentiation into Oligodendrocytes

3.1. Introduction 31
3.2. Strategy of work 33
3.3. Results 33
3.3.1. Isolation and Characterization of Neural stem cells 33
3.3.2. Role of BDNF & NGF in neural stem cell survival 35
3.3.3. Role of BDNF & NGF in neural stem cell proliferation 36
3.3.4. Validation of gliogenesis by evaluation of Notch-1 expression 38
3.3.5. NGF and BDNF mediated regulation of NSC differentiation in oligodendrocytes 39
3.3.6. Differentiation of NSCs to Astrocytes and Neuron with treatment of NGF & BDNF 42
3.3.7. Involvement of TrkA & TrkB in Oligodendrocyte generation through ERK pathway 43
3.3.8. Morphological analysis of Neurotrophins (NGF & BDNF) treated neural stem cells 46
3.4. Discussion 50

4. Chapter 4: To study the signaling mechanism of BDNF and NGF in Oligodendrocyte Progenitor Cells (OPCs) proliferation, migration and differentiation

4.1. Introduction 52
4.2. Strategy of work 54
4.3. Results 54
4.3.1. Isolation and characterization of Rat Oligodendrocytes Progenitor cells 54
4.3.2. OPC proliferation is regulated via neurotrophins receptors, TrkB and TrkA 56
4.3.3. NGF and BDNF mediated regulation of OPCs migration through TrkA and TrkB receptors 59
4.3.4. Neurotrophins regulated oligodendrocytes differentiation 63
4.4. Discussion 64

Table of Contents

5. Chapter 5: To identify the involvement of BDNF and NGF in remyelination in cytokine affected myelination.

5.1. Introduction 68
5.2. Strategy of work 69
5.3. Results 72
5.3.1. Isolation and characterization of Myelinating spinal cord culture 72
5.3.2. TNF-α induced demyelination in myelinating culture: Dose dependent study of TNF-α on myelin protein levels, Apototic markers and TNF-α receptors in the event of demyelination 73
5.3.3. Dose dependent effect of TNF-α on Neurotrophins 77
5.3.4. Study of remyelination potential of Neurotrophins 79
5.4. Discussion 83

6. Chapter 6: Study the mechanism underlying estradiol mediated neurotrophins expression in cortical astrocytes.

6.1. Introduction 86
6.2. Strategy of work 88
6.3. Results 89
6.3.1. Isolation and Characterization of Rat cortical astrocytes 89
6.3.2. 17-β Estradiol modulates NGF and BDNF transcript levels in cortical Astrocytes 89
6.3.3. Involvement of ERK in E2 mediated modulation of NGF and BDNF transcript levels 92
6.3.4. Modulatory effects of E2 and its receptors on p-ERK1 94
6.3.5. ERα and ERβ mediated cell Viablity 96
6.3.6. Role of ERK in E2 treated astrocytes cell viability 97
6.4. Discussion 97

7. Summary 101

Bibliography 105
