Table of Contents

Table of Contents **i**

1 Introduction to Random Matrix Theory (RMT) **1**
1.1 About the Random Matrix Theory : A compendium 1
1.2 Space-Time symmetries and introduction to classical Gaussian Ensembles 2

2 BEGOE(k): Spinless bosons and their spectral analysis **10**
2.1 Introduction 10
2.2 Construction of BEGOE(k) 12
2.3 Spectral Analysis 14
2.3.1 Eigenvalue Density 14
2.3.2 Nearest Neighbor Spacing Distribution (NNSD) 16
2.4 Conclusion 18

3 BEGOE(1+2)-F: Embedded bosonic ensemble with fictitious spin **23**
3.1 Introduction 23
3.2 Construction of Hamiltonian for spinless BEGOE(1+2) 26
3.3 Definition and Construction of BEGOE(1+2)-F 28
3.4 Spectral Analysis 33
3.4.1 Eigenvalue density for BEGOE(2)-F 33
3.4.2 Average-fluctuation separation in BEGOE(2)-F 34
3.4.3 Fixed-F eigenvalue centroids and spectral variances 36
3.4.4 Short range spacing statistics : NNSD and Brody distribution 39
3.4.5 Long range spacing statistics : Δ_3 statistics 40
3.4.6 1/f noise and power spectrum analysis 42

3.5 Conclusion 44

4 BEGOE(1+2)-$S1$: Embedded ensemble of finite interacting bosons with spin one degree of freedom 52

4.1 Introduction 52
4.2 Definition and construction of BEGOE(1+2)-$S1$ Hamiltonian 54
4.3 Embedding algebra 59
4.4 Spectral Analysis 62
4.4.1 Eigenvalue density 62
4.4.2 Nearest Neighbour Spacing Distribution 64
4.5 Propagation of Energy centroids and Spectral variance 65
4.6 Study of fluctuations in energy centroids and spectral variances by analyzing self correlations 68
4.7 Pairing algebras for BEGOE(1+2)-$S1$ 69
4.7.1 Expectation values of the pairing Hamiltonian in BEGOE(1+2)-$S1$ 69
4.8 Conclusions 70

5 EGOE(1+3)-s : Embedded fermionic ensemble with three body interaction 79

5.1 Introduction 79
5.2 Construction of Hamiltonian 81
5.3 Spectral Analysis 84
5.3.1 Eigenvalue density 84
5.3.2 Average-fluctuation separation 85
5.3.3 Nature of Nearest Neighbour Spacing Distribution 86
5.3.4 Behaviour of Dyson Mehta (Δ_3) statistics 86
5.4 Conclusion 87

6 Poisson to GOE transition using the distribution of ratio of consecutive level spacings 93

6.1 Introduction 93
6.2 Ratio of consecutive level spacings : $P(r)dr$ analysis 94
6.3 Introducing an interpolating random 3×3 matrix ensemble and mapping to a matrix of order $d \times d$ 96
6.3.1 A general $d \times d$ ensemble : Observing the Poisson to GOE transition 98

6.3.2 Mapping 3×3 and $d \times d$ matrix 101
6.3.3 $P(r)dr$ analysis for random matrix ensembles 101
6.4 One dimensional finite lattice chain of interacting spins$-1/2$: A brief introduction 103
6.4.1 Analyzing the Poisson to GOE transition 105
6.5 Conclusions 107

7 Conclusion and future outlook **118**

Appendix A **124**

Appendix B **126**

Appendix C **131**

Bibliography **135**
