CONTENTS

1. **INTRODUCTION** **1-49**

   1.1 Biosynthesis of prostanoids and leukotrienes

   1.2 The role of prostanoids in inflammation

   1.3 Mechanism of action of NSAIDs

   1.4 Cyclooxygenase isoenzymes: COX-I AND COX-II

   1.5 Need of selective COX-II inhibitors

   1.6 Development of selective COX-II inhibitors

   1.7 Diaryl heterocycles as selective COX-II inhibitors for anti-inflammatory action: recent setbacks

   1.8 Selective COX-II inhibitors: newer therapeutic targets

2. **AIMS AND OBJECTIVES** **50**

3. **RESULTS AND DISCUSSION** **51-92**

   3.1 Chemical Studies

   3.2 Biological Studies

4. **EXPERIMENTAL WORK** **93-167**

   4.1 Chemical Studies

   4.2 Biological Studies

5. **SUMMARY** **168-174**

REFERENCES **175-193**
