LIST OF TABLES

TABLE NO.	TITLE	PAGE NO.
2.1	Different solvent systems used for recording the TLC profiles of successive extracts of the selected plant materials.	40
2.2	Solvent systems used for recording the HPTLC finger print profiles of methanol extract of the selected plant materials.	45
2.3	Different standards used for estimation of various elements and their working range on atomic absorption spectrophotometer.	49
2.4	Color consistency and percentage yield of successive extracts of selected plant materials.	54
2.5	Fluorescence studies of successive extracts of the selected plant materials.	55
2.6	Qualitative chemical analysis of successive extracts of selected plant materials.	56
2.7	TLC profile of the secondary metabolites detected in successive extracts of the roots of *E. echinatus*.	57
2.8	TLC profile of the secondary metabolites detected in successive extracts of the aerial parts of *T. glaberrima*.	58
2.9	Fluorescence analysis of the powder material of *E. echinatus* roots and *T. glaberrima* aerial parts.	76
2.10	R_f values, relative percentage and absorption maxima of the separated compounds in methanol extract of the roots of *E. echinatus* in solvent system-1.	78

2.11	R_f values, relative percentage and absorption maxima of the separated compounds in methanol extract of the roots of *E. echinatus* in solvent system-2 and 3.	80
2.12	R_f values, relative percentage and absorption maxima of the separated compounds of the methanol extract of *T. glaberrima* aerial parts in solvent system-1.	83
2.13	R_f values, relative percentage and absorption maxima of the separated compounds of the methanol extract of *T. glaberrima* aerial parts in solvent system-2.	85
2.14	R_f values, relative percentage and absorption maxima of the separated compounds of the methanol extract of *T. glaberrima* aerial parts in solvent system-3.	87
2.15	Total phenolic and flavonoid content in the roots of *E. echinatus* and aerial parts of *T. glaberrima.*	93
2.16	Content of heavy metals and other inorganic elements in the roots of *E. echinatus* and aerial parts of *T. glaberrima.*	98
2.17	Some important features of phytochemical studies of both plants.	107
2.18	Some important morphological features of both plants.	108
2.19	Comparative microscopic features of the different organs of both plants.	109
2.20	Some important features of powder microscopy of both plant materials.	110

2.21	Physico chemical constants of both plant materials.	111
2.22	Finger print pattern of the methanol extracts of both plant materials.	111
2.23	Phenolic and flavonoid content in both plant materials.	112
2.24	Content of Heavy metal and other inorganic elements in both plant materials.	112
3.1	Treatment schedule for animals.	119
3.2a	Effect of oral administration of the methanol extracts of the roots of *E. echinatus* and aerial parts of *T. glaberrima* on copulatory behavior in male rats.	142
3.2b	Effect of oral administration of the methanol extracts of the roots of *E. echinatus* and aerial parts of *T. glaberrima* on copulatory behavior in male rats.	143
3.3a	Effect of oral administration of the methanol extracts of the roots of *E. echinatus* and aerial parts of *T. glaberrima* on orientational behavior of animals.	144
3.3b	Effect of oral administration of the methanol extracts of the roots of *E. echinatus* and aerial parts of *T. glaberrima* on orientational behavior of animals.	145
3.4	Changes in the body weight and weight of reproductive organs of rats after treatment with the extracts of *E. echinatus* and *T. glaberrima*.	146

3.5	Effect of oral administration of the methanol extract of roots of *E. echinatus* and aerial parts of *T. glaberrima* on testicular histomorphology, serum levels of testosterone and epididymal sperm concentr tion.	147
3.6	Effect of oral administration of the methanol extracts of *E. echinatus* and *T. glaberrima* on activity of antioxidant enzyme in testicular tissue.	152
3.7	Change in the body weight and weight of reproductive organs after treatment with TRFPE in male rats.	158
3.8	Effect of oral administration of TRFPE on testicular histomorphology and epididymal sperm concentration.	159
4.1	Method validation parameters for quantification of lupeol using proposed HPTLC method.	185
4.2	Intra and inter day precision study.	186
4.3	Recovery studies of lupeol.	186
4.4	Quantification of lupeol content in two plant materials using the HPTLC method described.	186
