LIST OF TABLES

Table No.		Page No.
1	Effect of adrenalectomy and hormone replacement on brain chemistry.	:61
2	Effect of various stressors on GABA-binding and it's functional activity.	:100
3	Studies reported on the exogenous administration of glucocorticoids on GABA related enzymes in the brain.	:104
4	Development of specific activities of GABA enzyme in different regions of the rat brain.	:108
5	Enzyme activities as percentage of adult value in different regions of the rat brain during development.	:110
6	Effect of various steroid hormones on GS and GAD activity in 10 day old rat brain cerebellum and hypothalamus.	:119
7	Effect of corticosterone administration on weights of the rat brain regions during development.	:122
8	Effect of chronic corticosterone administration on specific activity of enzymes of GABA metabolism in rat brain regions during development.	:125
9	Reported studies on the effect of exogenous administration of glucocorticoids on changes in bioamine of the adult brain.	:136
10	The developmental pattern of tryptophan, 5-hydroxytryptamine (5-HT) and 5-hydroxyindole-acetic acid (5HIAA) in rat brain regions.	:140
11	The effect of chronic corticosterone treatment on tryptophan, 5HT and 5HIAA concentration in rat brain regions at different ages.	:144
12	The effect of acute corticosterone treatment on tryptophan, 5-HT and 5HIAA concentrations in hypothalamus and hippocampus at different ages.	:147

List of Tables (Contd...)

Table No.		Page No.
13	The developmental pattern of p-tyrosine, dopamine (DA), 3,4-dihydroxyphenylacetic acid (DOPAC), homovanillic acid (HVA) and noradrenalin (NE) in rat brain regions.	: 149
14	The effect of chronic corticosterone treatment on p-Tyr, DA, DOPAC, HVA and NE concentration in different regions of rat brain at various ages.	: 152
15	The effect of acute corticosterone treatment on p-Tyr, DA, DOPAC and NE concentration in rat hypothalamus and hippocampus at 10 and 90 days of age.	: 155
16	The development of p- and m-tyramine in rat brain striatum.	: 168
17	Effect of corticosterone treatment on p- and m-tyramine, p-tyrosine, DA, DOPAC and HVA concentrations in the embryonic day 15 brain and adult striatum.	: 170
18	Effect of acute corticosterone treatment on tryptamine, tryptophan, 5HT and 5HIAA concentration in the embryonic day 15 rat brain and adult striatum.	: 172
19	Developmental pattern of cholesterol and galactolipid concentration in rat brain regions.	: 182
20	Percent increment in cholesterol and galactolipids in the rat brain regions during development.	: 185
21	*In vivo* ^{14}C-glucose incorporation into various lipids in hippocampus and striatum at 20 days of age with corticosterone treatment.	: 192
22	Effect of chronic corticosterone treatment on BDH activity in 20 day old rat brain regions.	: 197
23	Summary of the effects of chronic corticosterone treatment on the enzymes of GABA metabolism during development.	: 201
24	Summary of the effects of chronic and acute corticosterone treatment on bioamine concentration and their precursors and metabolites.	: 202
