Table of Contents

Chapter	Title	Page No.
Chapter 1	**Review of Literature**	**1-71**
1.1	**Mammalian gut microbiota and probiotics**	2
1.1.1	Significance and functions of gut microbial community	3
	Commensal microbes as intestinal immune modulators	6
	Mucosal barrier function: Role of commensal gut microbiota	8
	Metabolic functions of the gut microbiota	9
1.1.2	Probiotics	12
	Significance of probiotics	12
	Clinical significance of probiotics	13
	Mechanisms of Probiotic function	14
	Escherichia coli as probiotics	17
	Major features of *E. coli* Nissle 1917	17
	Genetic modification of probiotics	19
1.2	**Reactive oxygen species and oxidative stress**	22
1.2.1	ROS induced oxidative damage	25
	Damage to DNA	25
	Damage to proteins	27
	Damage to lipids	28
1.2.2	Antioxidants	30
1.2.3	Physiological functions of ROS in mammals	33
1.3	**Ethanol and associated metabolic disorders in humans**	34
	Metabolism of ethanol in mammals	35
	Effect of ethanol and acetaldehyde on human physiology	39
1.4	**Ageing and age associated deleterious changes**	40
1.4.1	Theories of aging	41
	Free Radical Theory of Ageing (FRTA)	41

	Vicious Cycle Theory of Ageing	41
	Mitochondrial Mutational Theory	42
	Inflammatory theory of Ageing	43
1.4.2	Metabolism in ageing	43
1.4.3	Pathological implications of ageing	47
	Ageing and Neurodegenerative Disorders	48
	Ageing and Cardiovascular Disorders	49
	Ageing and gastrointestinal tract	50
1.4.4	Mitochondria and its involvement in aging	52
1.4.5	Calorie restriction and aging	53
1.5	**Pyrroloquinoline Quinone (PQQ)**	53
1.5.1	PQQ synthesis	55
1.5.2	Functions of PQQ	57
1.6	**Inflammatory Bowel Disease (IBD), ROS and gut microbiota**	61
1.6.1	Murine models for Inflammatory Bowel Disease	66
1.6.2	Key lessons learned from IBD models	68
1.6.3	NADPH oxidases and redox response in gastrointestinal tract	69
Chapter 2	**Evaluating effect of PQQ secreting *Escherichia coli* strains on ethanol mediated oxidative damage and dyslipidemia in rats**	**72-101**
2.1	**Introduction**	73
2.2	**Methods and materials**	75
2.2.1	Bacterial Strains and Culture Conditions	75
2.2.2	Plasmids and constructs	75
2.2.3	Animals	76
2.2.4	Designing of experiments	77
2.2.5	Characterization of PQQ secreting EcN (EcN-4)	78
2.2.6	PQQ extraction and quantification	78
2.2.7	Preparation of cell lysate and tissue homogenate	79
2.2.8	Biochemical assays	79

2.2.9	Histopathological changes	80
2.2.10	Serum Glutamate Pyruvate Transferase (SGPT) activity, total bilirubin and blood lipid estimation.	80
2.2.11	mRNA expression and qRT-PCR of hepatic lipid metabolizing genes	80
2.2.12	Estimation of colonic SCFAs	81
2.2.13	Statistical analysis	81
2.3	**Results**	
2.3.1	Standardization of optimal ethanol dose and duration to created ethanol induced model of systemic oxidative stress and dyslipidemia	82
2.3.2	Transformation of probiotic *E. coli* strains with plasmid harboring pqq gene cluster	85
2.3.3	Effect of EcN-4 secreting PQQ against acute ethanol induced oxidative stress	86
2.3.4	Effect of EcN-4 secreting PQQ on antioxidant status in chronic ethanol treated rats	87
2.3.5	Effect of EcN-4 secreting PQQ on weight gain, lipid profile and hepatic gene expression in chronic ethanol treated rats	91
2.3.6	PQQ concentration in feces and liver in rats treated with EcN-4 secreting PQQ	94
2.4	**Discussions**	98
Chapter 3	**Evaluating the effects of PQQ secreting *Escherichia coli* Nissle 1917 strain on rotenone induced oxidative damage in rats**	**102-117**
3.1	**Introduction**	103
3.2	**Methods and materials**	106
3.2.1	Bacterial strains and culture conditions	106
3.2.2	Plasmids and constructs	106
3.2.3	Animals	107
3.2.4	Designing of the experiment	107
3.2.5	Characterization of PQQ secreting E. coli Nissle 1917	108
3.2.6	Enzyme assays and estimations	108
3.2.7	mRNA expression and qRT-PCR	108
3.3	**Results**	110
3.3.1	Cloning and expression of pqqABCDE gene cluster in EcN	110

3.3.2	Standardization of rotenone dose and duration for generation of systemic oxidative damage in rats	111
3.3.3	Amelioration of hepatotoxic effect of rotenone by PQQ and PQQ producing EcN-5	113
3.4	**Discussions**	116
Chapter 4	**Evaluating the long term protective efficacy of PQQ producing probiotic *Escherichia coli* Nissle 1917 strain in aging rats**	**118-137**
4.1	**Introduction**	119
4.2	**Methods and materials**	122
4.2.1	Bacterial strains, culture conditions and plasmids.	122
4.2.2	Animals	122
4.2.3	Designing of the experiment	123
4.2.4	Enzyme assays and biochemical estimations	123
4.2.5	mRNA expression and qRT-PCR	123
4.2.6	*C. elegans* growth conditions and survival assays	124
4.2.7	Statistical analysis	125
4.3	**Results**	126
4.3.1	Antioxidant status and lipid profile of young and aged Charles Foster rats	126
4.3.2	Evaluating long term effect of PQQ producing EcN-5 treatment in aging rats	127
4.3.3	PQQ levels in fecal matter and liver if treated rats	133
4.3.4	Effect of PQQ on survival of *C. elegans* against heat shock and H_2O_2.	133
4.4	**Discussion**	135
Chapter 5	**Exploring the prebiotic potential of Pyrroloquinoline Quinone producing probiotic *Escherichia coli* Nissle 1917 in starch fed rats**	**138-154**
5.1	**Introduction**	139
5.2	**Methods and materials**	141
5.2.1	Bacterial strains and culture conditions	141
5.2.2	Construction and characterization of EcN producing PQQ	141
5.2.3	Animal experiments	142

5.2.4	Sample preparation and Biochemical estimations	144
5.2.5	Statistical analysis	145
5.3	**Results**	146
5.3.1	Generation of high PQQ producing EcN strain and genomic integration of pqqABCDE gene cluster in EcN.	146
5.3.2	PQQ producing EcN-7 and EcN-9 secretes gluconic acid in vitro and in vivo	149
5.3.3	Effect of EcN-7 feeding, dietary gluconic acid and PQQ on colonic SCFAs profile	150
5.4	**Discussion**	152
Chapter 6	**Redox modulation of intestinal diseases using probiotic *Escherichia coli* Nissle 1917 producing antioxidant Pyrroloquinoline Quinone**	**155-175**
6.1	**Introduction**	156
6.2	**Methods and materials**	159
6.2.1	Bacterial strains and plasmids	159
6.2.2	Animals	159
6.2.3	Colonization of *E. coli* Nissle 1917 in C57 BL/6 mouse gut	159
6.2.4	DSS treatment and probiotic ingestion	159
6.2.5	Histological scoring for DSS experiment	160
6.2.6	*C. rodentium* infection	161
6.2.7	Bacterial enumeration	161
6.2.8	*In Vitro C. rodentium* growth inhibition assay	162
6.2.9	mRNA extraction and qPCR analysis	162
6.2.10	Protein extraction and Western blotting	163
6.2.11	Statistical analysis	163
6.3	**Results**	164
6.3.1	Colonization of *E. coli* Nissle 1917 in mouse C57 BL/6 mouse gut	164
6.3.2	Evaluating the effect of co- and post-treatment of *E. coli* Nissle 1917 producing antioxidant PQQ in DSS induced experimental colitis	164
6.3.3	Evaluating the effect of co- and post-treatment of *E. coli* Nissle 1917 producing antioxidant PQQ in murine Citrobacter rodentium infection model	168

6.3.4 *In vitro C. rodentium* growth inhibition by wild type and PQQ producing E. coli Nissle 1917 171

6.4 Discussions 173

Conclusion 175
