ACKNOWLEDGEMENTS

My thesis submission marks the end of a long and eventful journey which has certainly explained a vital fact of life, that "STRENGTH does not come from winning; it is your STRUGGLE which develops your strengths". When my voyage commenced; I was not sure where I would land up! But it is with the incessant efforts and support of numerous people, that I could arrive at my destination successfully and satisfactorily. With this, before I actually conclude my voyage, I would like to take the privilege of acknowledging all those who helped and supported in their own decisive ways. I am not at all exaggerating when I admit that I am indebted to my research supervisor Prof. G. Naresh Kumar, better known as NK Sir, for his precious guidance; scientific counseling; never-ending patience, optimistic approach and powerful words of encouragement. His endless zest for science always has provided a positive thrust while the tea-time discussions with him on any-and-every topic on this earth, hardly made us feel like his students. I am extremely grateful to him for giving me an opportunity to learn, think and work in a healthy and liberal environment at Molecular Microbial Biochemistry Lab (MMBL). A practical lesson that always came from him when he said "You are not here to change the system; indeed make the most of the existing system and push ahead" had almost everything to explain if understood. With all the hurdles coming along, I would certainly not have been where I am, if NK Sir wouldn't have been the way he was, absolutely incredible. Nevertheless even after all this; if I am satisfied expressing my gratitude towards him using these mere dictionary words, I am still lacking something. Thanks a Ton Sir!

I would like to express my deep gratitude to Prof. G. Naresh Kumar as the Head of the Department, for providing the entire basic infrastructure including library, internet and other research facilities as well as for developing a great work culture with a sense of teamwork and healthy competition in the department. I am thrilled to have worked as a part of the department in its best developing phase. I extend my heartfelt thanks to Prof. G. Archana, Department of Microbiology and Biotechnology Centre, for her tremendously helpful critical comments and excellent analytical skills which helped adding a different meaning to my research work. Thanks a lot for always being there to

support anytime; be it in the form of providing the resources or finding instant solutions to stuck-up research problems. Above all, I always relished the delicious food served with a flavor of warm hospitality. There was a lot to learn from you apart from research.

I am extremely grateful to Biochemistry department teachers; Dr. Rasheedunnisa Begum, Prof. Sarita Gupta, Dr. S. R. Acharya, Dr. Jayshree Pohnerkar, Dr. Pushpa Robin, Dr. C. RatnaPrabha, Dr Laximipriya and Dr Devesh suthar for building a strong foundation of the subject during annual presentation. Thanks are due to the office staff including Mr. Pethe, Akshitaben, Shaileshbhai, Manishbhai, Vyasbhai and all other staff members for their standing help and guidance in all the official matters. Thanks a lot, Rameshbhai (Nare) for keeping the Store open for me any time whenever wanted. I thank to Balwant bhai, Kiran, Ramesh kamble, and Sandeep and Anil bhai. Thank you so much Bhartiben, for settling the project accounts smoothly and ensuring timely payment of the fellowship. Thanks Anilbhai for helping me out with lab maintenance and make it an organized place to work in. I specially thank Mr. Sachine bhai and Jatin bhai for patiently listening to our sudden but urgent demands for chemicals/fine-chemicals and trying his levels best to deliver the order in time. I sincerely acknowledge the U.G.C, Government of India, for the fellowship.

I deeply acknowledge Prof. Goldstine Department of Biology, California State University at Los Angeles, State University Drive, Los Angeles, California for providing me pqqE gene. , (Dr. Goosen, Molecular Genetcis, University of Leiden, Netherland) for pqq gene cluster of Acinetobacter calcoaceticus and (Dr. Ingyu Hwanag, Department of Biochemistry, Seoul University, Korea) for pqq gene cluster of Pseudomonas fluorescens B16 for their generous gift gifted my special thanks to Prof. E. K. James Department of Biological Sciences, University of Dundee, Dundee, UK

Well! The MMBL ship with NK Sir as Captain was incomplete without a vast crew of research scholars. I wish to acknowledge Dr. Divya Patel who introduced me to sir, the senior-most research student when I was a freshier, who helped me get acquainted to the lab and learn to begin. Dr. Vikas Sharma, Dr. Gopit Shah, Dr. Prashant Kunjadia, Dr.

Aditi Buch and Dr. Jisha have been great seniors, who made me realize in their own striking ways, that research is much more than just experiments. My buddies Dr. Prashant Kumar, Dr. Hemanta Adhikary, have been simply rocking. Hats-Off to the party planning ability, which set and maintained the trend of Hi-Tea parties in the lab; believe me guys it was total fun. Every colleague was distinct, I Thank to Dr chanchal kumar and Miss Kavita Yadav; I was worth admiring, applauding and learning. Sonal madam and Praveena madam have been sources of spiritual empowerment. Praveena mam is emotional mam but really true at heart, and Sonal mam ki toh bat hi kuch aur hai, kisi bhi bat ka tension nahi ata unko, this is what both of them made me really calm and quiet, they tought me many things in my personal life, words are not enough to explain. The aspiring neophytes Ashish (Bussy in his and others stuff), Sumeet (party offering man) enjoyed lot of parties, Archana (Tension free gul), Ujwal (Sensetive and emotional), Ruma (thodi bindast bit asertive), Riddhi (angrey young gul) and Parini (creative) made a great company and I wish for the best in their future ahead. I thank to Archana, Ruma and Ujwal I had spend some good time with these three neophytes, movies Dinner plan achanak se jana hai toh jana hai.

It was a pleasure having seniors like, Dr. Chirayu, Dr Pradeep mishra , Dr. Niraj, Dr. Maulik Dr. Hemendra, Dr. Keyur Dave, Dr. Shajil Madhavan, Dr. Hiren modi, Dr. Iqbal , Dr. jyotika and Dr. Hina during my initial day I had spend my good ,quality time, my all seniors took lot of care about me. Thankyou for being so supportive as well as for making a wonderful and enjoyable company. I would like to applaud my dissertation students, Janvika, Sonika, Sneha and Kandarp for being a great helping hand all along and for creating a fun-filled work environment.

"A journey is best measured in friends rather than miles" and I traveled along these miles in the fantabulous company of my dear FRIENDS.....Ruchi Bhate played a multi-faceted role; a fantastic friend, sink to all my problems, partner to all my failures and achievements, a rocking traveling and shopping companion.

I am thankful to my friends in the department; Dr. Swapnali, Dr. Mrunal, Dr. Naresh, Dr. Mitesh, Dr. Purna Dr. Vijay, Krishma, Tushar Patel (Jado), Akhilesh, Ragita, Komal, Abhay, Rishikesh (night watchman—he work late night in lab), Divya, Radha (Mira), Arpi, Nirja, Path shah, Tina and Ankita ever smiling for their pleasurable company and I wish them all the very best.

Apart from work my friends made my PhD enjoy full by their company, Luky, Pramod (makadira), Bhupendra (bhupi) and thank you so much to all my friends who made my journey simple during my PhD.

I owe my research work to my dear Parents for their unconditional love and support, constant encouragement, difficult adjustments and for instilling in me, the moral values, confidence, faith, sense of responsibility, without which this work would not have been possible. My sister and Jijo played a major role in my life. Thanks are due to my near and dear ones and family members for having faith in my abilities. Ultimately, I bow down to God! The Almighty, who bestowed me with a healthy mind and body as well as the strength to stand up to the expectations of my parents, teachers, family and friends.

Jitendra wagh
