ACKNOWLEDGEMENTS

Pursuing my PhD in this university was a wonderful and little painful experience with the best people I have ever met in my life. My whole journey was the combination of struggle, fun, sorrow, rejoice, pain, pleasure, complications, uncertainties and a lots of ups and downs. But the verdict of all the difficulties was so fruitful. The completion of this thesis is the result of continues motivation and encouragement from my supervisor, colleagues and the higher authorities. This acknowledgement is not enough to describe the support that I've received from you people. Because without you people I was unable to reach on this platform. It is pleasant to thank all those people who helped for the completion of this study but this acknowledgement is not enough to express my gratitude.
