Contents

	Chapter 1 – INTRODUCTION	**1**
1.1	**Supramolecular Chemistry**	**3**
1.2	**Crystal Engineering – A concept**	**4**
1.2.1	Control of molecular solids – Designer crystals	5
1.2.2	Intermolecular interactions	7
1.2.3	Hirshfeld surface analysis	10
1.3	**Supramolecular Gelation**	**11**
1.3.1	LMOGs based on molecular design	14
1.3.1.1	*Fatty acids/long aliphatic chain based gelators*	15
1.3.1.2	*Carbohydrate/sugar based gelators*	16
1.3.1.3	*Amino acid/Peptide based gelators*	16
1.3.1.4	*Two-component/Multi-component gelators*	16
1.3.1.5	*Cholesterol/Anthryl (ALS) based amphiphilic gelators*	18
1.3.1.6	*Metallogels*	18
1.3.1.7	*Polymer based gelators*	18
1.3.2	Characterization of supramolecular gels	19
1.3.2.1	*Inverted vial method*	19
1.3.2.2	*Microscopy*	19
1.3.2.3	*Rheology*	20
1.3.2.4	*Small angle scattering*	21
1.3.2.5	*X-ray diffraction studies*	21
1.3.2.6	*NMR spectroscopy*	22
1.3.2.7	*Computational modelling*	22
1.3.2.8	*Other methods*	23
1.3.3	Employing solubility parameters to predict gelation	24
1.3.4	Applications of LMOGs	27
1.3.4.1	*Responsive materials*	28
1.3.4.2	*Catalysis*	32
1.3.4.3	*Sensing*	35
1.3.4.4	*Templates for nanoparticle synthesis*	39
1.3.4.5	*Biomaterials*	41

1.3.4.6	*Oil spill remediation and pollutant removal*	45
1.3.5	Challenges and futuristic aspects	52
1.4	**Aim and outline**	53
	References	**55**

Chapter 2

A combinatorial library of Memantine based Salts – Crystallography, Hirshfeld surfaces and dissolution studies **65**

2.1	**Introduction**	**67**
2.2	**Memantine and its compounds**	**71**
2.3	**Experimental procedures**	**74**
2.3.1	Synthesis	74
2.3.2	Materials and Methods	75
2.3.2.1	*NMR studies*	76
2.3.2.2	*FT-IR studies*	76
2.3.2.3	*Single crystal X-ray diffraction*	76
2.3.2.4	*Hirshfeld surface analysis*	76
2.3.2.5	*Dissolution studies of memantine salts*	76
2.3.2.6	*Powder X-ray diffraction (PXRD)*	77
2.3.2.7	*DSC studies*	77
2.3.3	Analytical Data	77
2.4	**Salt formation – Experimental and Structural Concepts**	**80**
2.4.1	Single crystal X-ray diffraction studies	80
2.4.2	Hirshfeld analyses	90
2.4.2.1	*Hirshfeld energies*	92
2.4.3	Dissolution studies	93
2.4.4	PXRD studies	96
2.4.5	DSC studies	97
2.5	**Conclusions**	**99**
	References	**101**
	Supplementary Data	105

Chapter 3A
A series of pivalic acid based multi-component systems – gelation behavior, solvent parameter study and template directed nano particle synthesis **125**

3.1	**Introduction**	**127**
3.2	**Background**	**128**
3.3	**Experimental procedures**	**130**
3.3.1	Synthesis	130
3.3.1.1	*Synthesis of salts **A1B1-A1B13***	130
3.3.1.2	*Synthesis of nanoparticles*	131
3.3.2	Gelation trials	131
3.3.3	Materials and Methods	131
3.3.3.1	*NMR studies*	131
3.3.3.2	*FT-IR studies*	131
3.3.3.3	*Single crystal X-ray diffraction*	132
3.3.3.4	*Hirshfeld surface analysis*	132
3.3.3.5	*Polarizing Optical Microscopy studies*	132
3.3.3.6	*SEM of gels*	132
3.3.3.7	*SEM of nanoparticles*	132
3.3.3.8	*Rheology*	133
3.3.3.9	*Powder X-ray diffraction studies*	133
3.3.3.10	*DLS (Dynamic Light Scattering) of nanoparticles*	133
3.3.3.11	*DRS (Diffuse Reflectance Spectroscopy) study of nanoparticles*	133
3.3.4	Analytical Data	133
3.4	**Results and Discussion**	**136**
3.4.1	Gelation studies and effect of amines on gelation	136
3.4.2	Solvent effects on gelation	143
3.4.3	Single crystal X-ray studies	155
3.4.4	Hirshfeld studies	158
3.4.4.1	*Hirshfeld energies*	159
3.4.5	Morphology	160
3.4.6	Rheology	165
3.4.7	Powder X-ray diffraction studies	165

3.4.8	Comparative IR studies	168
3.4.9	Characterization of silver nanoparticles	169
3.5	**Conclusions**	**172**
	References	**174**
	Supplementary Data	177

Chapter 3B

Probing the role of weak interactions on gelation behavior of tert-butylacetic acid based multi-component systems **207**

3.6	**Introduction**	**209**
3.7	**Experimental Procedures**	**210**
3.7.1	Synthesis of salts **A2B1-A2B13**	210
3.7.2	Gelation trials	210
3.7.3	Materials and Methods	211
3.7.3.1	*NMR studies*	211
3.7.3.2	*FT-IR studies*	211
3.7.3.3	*Polarizing Optical Microscopy studies*	211
3.7.3.4	*SEM of gels*	211
3.7.3.5	*Rheology*	212
3.7.3.6	*Powder X-ray diffraction studies*	212
3.7.4	Analytical Data	212
3.8	**Results and Discussion**	**215**
3.8.1	Gelation studies and effect of amines on gelation	215
3.8.2	Rheology	218
3.8.3	Morphology	219
3.8.4	Powder X-ray diffraction studies	221
3.8.5	Comparative IR studies	222
3.9	**Summarizing Discussion and Conclusions**	**225**
	References	**226**
	Supplementary Data	227

Chapter 4A
A novel class of pivalamide based organogelators with potential applications in oil spill remediation and sequestration of dyes from water **241**

4.1	**Introduction**	**243**
4.2	**Pivalic acid based compounds – Importance of *tert*-butyl group**	**244**
4.3	**Experimental Procedures**	**247**
4.3.1	Synthesis	247
4.3.2	Gelation trials	247
4.3.3	Phase selective organo-gelation (PSOG)	248
4.3.4	Dye removal studies	248
4.3.5	Materials and Methods	248
4.3.5.1	*NMR studies*	248
4.3.5.2	*FT-IR studies*	249
4.3.5.3	*Crystallography*	249
4.3.5.4	*Hirshfeld studies*	249
4.3.5.5	*Rheology*	249
4.3.5.6	*Morphology*	249
4.3.5.7	*Powder XRD*	250
4.3.5.8	*UV-vis studies*	250
4.3.6	Analytical Data	250
4.4	**Results and Discussion**	**253**
4.4.1	Gelation studies and effect of solvents on gelation	253
4.4.2	Phase selective organo-gelation in oil-water systems	259
4.4.3	Toxic dye removal	260
4.4.4	Rheology	264
4.4.5	Morphology	265
4.4.6	Structure – Property correlation (Single crystal X-ray studies)	267
4.4.7	Hirshfeld analyses	272
4.4.8	PXRD studies	274
4.4.9	Comparative FT-IR studies	275
4.5	**Conclusions**	**277**
	References	**278**

Supplementary Data 280

Chapter 4B
Supramolecular assemblies based on tert-butylacetic acid with potential applications in Phase Selective Organo-Gelation (PSOG), dye absorption and sensing studies **305**

4.6 Introduction 307
4.7 Experimental Procedures 310
4.7.1 Synthesis 310
4.7.2 Gelation trials 310
4.7.3 Phase selective organo-gelation (PSOG) 311
4.7.4 Dye removal studies 311
4.7.5 Heavy metal sensing 311
4.7.6 Materials and Methods 312
4.7.6.1 NMR studies 312
4.7.6.2 FT-IR studies 312
4.7.6.3 Crystallography 313
4.7.6.4 Hirshfeld studies 313
4.7.6.5 Rheology 313
4.7.6.6 Morphology 313
4.7.6.7 Powder XRD 313
4.7.6.8 UV-vis studies 314
4.7.7 Analytical Data 314
4.8 Results 316
4.8.1 Gelation studies and effect of solvents on gelation 316
4.8.2 Phase selective organo-gelation 319
4.8.3 Dye removal studies 320
4.8.4 Metal sensing studies 323
4.8.5 Rheology 327
4.8.6 Morphology 327
4.8.7 Single crystal and Hirshfeld studies 329
4.8.8 Powder X-ray diffraction studies 330

4.8.9	Comparative FT-IR studies	330
4.9	**Summarizing Discussion and Conclusions**	**332**
	References	**334**
	Supplementary Data	336

Chapter 5

Syntheses, characterization and SOD synzyme activity of copper(II) complexes with bi-dentate pivalamide ligands – Crystallography, DFT studies and DNA/BSA interactions **347**

5.1	**Introduction**	**349**
5.2	**Background**	**350**
5.3	**Experimental Procedures**	**356**
5.3.1	Synthesis of amides/ligands	356
5.3.2	Synthesis of metal complexes	356
5.3.3	Antioxidant assay	357
5.3.4	DNA cleavage studies	357
5.3.5	Protein binding studies	358
5.3.6	DNA binding studies	358
5.3.7	Materials and Methods	359
5.3.7.1	*NMR studies*	359
5.3.7.2	*FT-IR studies*	359
5.3.7.3	*Single crystal X-ray studies*	359
5.3.7.4	*Powder X-ray studies*	359
5.3.7.5	*Computational calculations*	359
5.3.7.6	*Hirshfeld studies*	360
5.3.7.7	*UV-vis studies*	360
5.3.7.8	*Fluorescence studies*	360
5.3.7.9	*ESR studies*	360
5.3.7.10	*ESI-MS studies*	360
5.3.8	Analytical Data	360
5.4	**Results and Discussion**	**363**
5.4.1	UV studies of metal complexes	363

5.4.2	ESR analysis	363
5.4.3	Crystallography	365
5.4.4	Hirshfeld studies	369
5.4.5	Computational studies	372
5.4.6	Superoxide dismutase activity	375
5.4.7	DNA cleavage studies	377
5.4.8	BSA binding studies	379
5.4.8.1	*BSA conformational analysis*	383
5.4.9	DNA binding studies	383
5.5	**Conclusions**	**387**
	References	**388**
	Supplementary Data	392
