

Contents

1	Introduction	1
1.1	Overview of Nuclear Reaction Models	2
1.2	Description of the Pre-equilibrium models	4
1.3	Review of the results of pre-equilibrium emissions	8
1.4	Motivation and Objectives	11
1.5	Overview of the present work	14
2	Study of Excitation functions of heavy residues produced in the reaction of $^{14}\text{N}+^{103}\text{Rh}$	21
2.1	Introduction	23
2.2	Experimental Details	25
2.2.1	Detector Energy and Efficiency Calibration	30
2.2.2	Determination of the Reaction Cross-section	34
2.2.3	Errors in the Cross-section Measurement	43
2.3	Model Calculations	43
2.3.1	Level Density Analysis	43
2.4	Results and Discussion	45
3	Study of Neutron Emissions in ^{19}F-induced reactions	59
3.1	Introduction	61
3.2	Experimental Details	62
3.3	Details of ALICE2014 Calculations	64
3.4	Details of PACE4 Calculations	67
3.5	Results and Discussion	84
4	Study of Emission of Alpha particles in the interaction of ^{14}N with ^{59}Co and ^{93}Nb	91
4.1	Introduction	93
4.2	Theoretical model	94
4.3	Experimental Details	95
4.4	Results and Discussion	95
5	Summary and Conclusions	107
