## List of Tables

<b>Table 1-1</b> Root-Root interactions involved in the growth of the legume –cereal intercropped plants with minimal application of chemical fertilizer.....	11
<b>Table 1-2</b> Role of root-microbe/microbiome interactions involved in cereal- legume intercropping systems.....	13
<b>Table 2-1</b> Plant growth-promoting rhizobacteria used for this study.....	29
<b>Table 2-2</b> Identification of organic acids from the root exudates of monocropped and intercropped plants by LC/MS/MS (MRM mode).....	45
<b>Table 3-1</b> List of key metabolites identified in <i>Cajanus cajan</i> and <i>Zea mays</i> root exudates of intercropped and monocropped plants by GC-MS/MS.....	63
<b>Table 4-1</b> List of genes used for qRT-PCR studies in NGR234.....	77
<b>Table 4-2</b> List of primer sequences used to construct <i>PnodA::gfp</i> .....	81
<b>Table 4-3</b> List of NGR234 proteins differentially expressed upon treatment with monocropped and intercropped <i>Z. mays</i> root exudates identified by label-free quantitative proteomics...	97
