

Table of Contents

Chapter 1 - Review of Literature	1
1. Introduction.....	2
1.1 Intercropping for enhanced productivity and fertility of the soil	2
1.2 Advantages of intercropping system	3
1.3. Resource use efficiency in cereal-legume intercropping system	5
1.4. N and P utilization from the rhizosphere of cereal - legume intercropping system.....	7
1.5 Biological interactions existing at an eco-physiological level can minimize the input of chemical fertilizer in intercropping system.....	10
1.5.1 Importance of interspecific facilitation in cereal- legume intercropping system.....	10
1.5.2 Impact of rhizospheric microbes in intercropping systems	12
1.6. Rhizospheric interactions attributed to root exudates	15
1.6.1 Role of root exudates in plant-plant signaling	17
1.6.2 Role of root exudates in plant-microbe interactions	19
Scope of the thesis	23
Objectives.....	24
Chapter 2 Influence of root exudates on chemotaxis and colonization of diverse plant growth promoting rhizobacteria in <i>Cajanus cajan</i> – <i>Zea mays</i> intercropping system	25
2.1 Introduction.....	26
2.2 Materials and Methods.....	28
2.2.1 PGPR strains used in this study.....	28
2.2.2 Plant inoculation experiments	28
2.2.3 Cross colonization studies of PGPR in intercropped plants.....	30
2.2.4 Colonization of NGR234 on <i>C. cajan</i> and <i>Z. mays</i> plants by Confocal laser scanning microscopy	31
2.2.4.1 Tagging of NGR234.....	31

2.2.4.2 Inoculation on to the <i>C. cajan</i> and <i>Z. mays</i> seedlings	31
2.2.5 Root exudates collection and organic acid analysis by LC/MS/MS	31
2.2.6 Chemotaxis and Biofilm assay	33
2.2.7 Statistical Analysis	35
2.3 Results	35
2.3.1. Effect of PGPR on the monocropped <i>C. cajan</i> and <i>Z. mays</i> plants.....	35
2.3.2. Study of cross colonization of PGPR in <i>C. cajan</i> – <i>Z. mays</i> intercropped plants	37
2.3.3 Colonization of NGR234 on <i>C. cajan</i> and <i>Z. mays</i> plant roots.....	40
2.3.4. Assessment of the chemotactic response and biofilm formation of PGPR towards root exudates	41
2.3.5. Analysis of organic acids in the root exudates of monocropped and intercropped plants	43
2.3.6. Effect of organic acids on the chemotaxis and biofilm formation of PGPR.....	46
2.4 Discussion	48
2.4.1. Colonization and plant growth promotion by PGPR on the monocropped plants	48
2.4.2. Cross-colonization of PGPR in intercropped plants	49
2.4.3. Root exudates of monocropped and intercropped plants differentially induced chemotaxis and biofilm formation of PGPR	50
2.4.4. Identification of targeted organic acids from root exudates of monocropped and intercropped plants and their effects on PGPR	50
Chapter 3 : Identification of primary metabolites from the root exudates of <i>Cajanus cajan</i> – <i>Zea mays</i> intercropping system and their influence on <i>Ensifer fredii</i> NGR234	52
3.1 Introduction.....	53
3.2 Materials & Methods.....	55
3.2.1. Plant cultivation for root exudates collection.....	55
3.2.2. Preparation of root exudates from monocropped and intercropped plants	55

3.2.3. Untargeted metabolite profiling of root exudates by GC-MS/MS	57
3.2.4. GC-MS/MS analysis	57
3.2.5 Effect of root exudates and individual metabolites on the physiological response of NGR234	58
3.2.5.1 Chemotaxis	58
3.2.5.2 Growth pattern and Biofilm.....	58
3.3. Results.....	59
3.3.1. Metabolite profiles of monocropped and intercropped plants root exudates	59
3.3.2. Chemotaxis behavior of NGR234 towards root exudates of monocropped and intercropped <i>C. cajan</i> and <i>Z. mays</i> plants	65
3.3.3. Growth and biofilm formation by NGR234 in presence of root exudates of monocropped and intercropped <i>C. cajan</i> and <i>Z. mays</i> plants.....	65
3.4. Discussion	68
3.5.1. Identification of primary metabolites in the root exudates of <i>C. cajan</i> – <i>Z. mays</i> intercropped plants and their physiological effect on NGR234.....	69
Chapter 4 Molecular effects of <i>C. cajan</i> & <i>Z. mays</i> root exudates on NGR234 and its interactions with monocropped and intercropped <i>Z. mays</i> plants.....	72
4.1 Introduction.....	73
4.2. Materials and Methods.....	76
4.2.1. Quantification of relative gene expression of selected genes of NGR234 in the presence of <i>C. cajan</i> & <i>Z. mays</i> monocrops root exudates	76
4.2.1.1. RNA extraction and cDNA synthesis	76
4.2.1.2. Transcription analysis of NGR234 genes	77
4.2.2 Plasmid and Genomic DNA isolation	78
4.2.3. Assembly of <i>nodA</i> promoter region-GFP fusion construct.....	79

4.2.4. Plasmid transformation	80
4.2.4.1 Transformation into <i>Escherichia coli</i> strain	80
4.2.4.2 Triparental mating into NGR234	80
4.2.5. Visualization of <i>PnodA::gfp</i> expression in NGR234 on <i>C. cajan</i> and <i>Z. mays</i> plants by CLSM	81
4.2.6. Protein expression profiling of NGR234 by label free proteomic approach.....	81
4.2.6.1 Extraction of total proteins from NGR234	81
4.2.6.2 In-solution digestion of proteins.....	82
4.2.6.3 LC-MS/MS conditions and analysis	82
4.2.7. Bioinformatic analysis of biological pathways and protein-protein interactions.....	84
4.3 Results	85
4.3.1. Differential expression of NGR234 genes in the presence of <i>C. cajan</i> and <i>Z. mays</i> monocrop plants root exudates.....	85
4.3.2. Visualization of <i>PnodA::gfp</i> expression on <i>C. cajan</i> and <i>Z. mays</i> roots	87
4.3.3. Differentially expressed NGR234 proteins in presence of monocrop and intercrop <i>Z. mays</i> root exudates	90
4.3.4. Quantitative expression of proteins in presence of monocrop and intercrop <i>Z. mays</i> root exudates.....	92
4.4 Discussion	98
4.5.1 Molecular effects displayed by <i>C. cajan</i> and <i>Z. mays</i> root exudates on NGR234.....	98
4.5.2. Differentially expressed proteins of NGR234 at the stationary phase in the presence of <i>Z. mays</i> root exudates of monocropped and intercropped plants	99
Summary & Conclusion	102
Appendix.....	106
References.....	127
Publications and Presentations.....	156
