<b>Abstract</b>	<b>iii</b>
<b>Contents</b>	<b>v</b>
<b>Chapter – 1 Introduction</b>	<b>1</b>
1.1. The Early Earth	3
1.2. Tracers of Early Silicate Earth Differentiation	4
1.3. Evolution of the Mantle	12
1.4. Motivation and Objectives	13
1.5. Methodology and Approach	14
1.6. Outline of the Thesis	16
<b>Chapter – 2 Samples and Geochemical Characterization</b>	<b>20</b>
2.1. Geochemical Methods	21
2.2. TTG from Singhbhum, Odisha	21
2.3. Granitoids from BGC-1, Rajasthan	22
2.4. Nepheline syenites from Khariar Alkaline Complex, Odisha	23
2.5. Nepheline syenites from Kishengarh, Rajasthan	24
2.6. Kimberlites from EDC, Karnataka	25
2.7. Alkali Basalts from Phenai Mata Igneous Complex, Gujarat	25
2.8. Carbonatites and alkaline silicate rocks from Amba Dongar, Sung Valley and Newania Complexes, India	26
<b>Chapter – 3 Analytical Methods</b>	<b>43</b>
3.1. Chemistry	44
3.2. Mass Spectrometry	47
<b>Chapter – 4 Results and Discussion</b>	<b>55</b>
4.1. Effect of mass spectrometric procedures on accuracy of $^{142}\text{Nd}/^{144}\text{Nd}$	56
4.1.1. Data acquisition: 2- versus 3- sequence multi-dynamic mode	57

4.1.2. Corrections for isobaric interferences	59
4.1.3. Correction for mass dependent fractionation	59
4.1.4. Choice of terrestrial standard used:	60
Ames Nd vs JNdi-1	
4.2. In search of $\mu^{142}\text{Nd}$ anomalies in Indian rocks	61
4.2.1. $^{142}\text{Nd}/^{144}\text{Nd}$ isotopic composition of continental alkaline rocks of India	62
4.2.2. $^{142}\text{Nd}/^{144}\text{Nd}$ of Archean rocks	63
4.2.3. $^{142}\text{Nd}$ evolution of Indian mantle domains	63
<b>Chapter – 5 Summary and Conclusions</b>	<b>103</b>
5.1. Summary of analytical methods	104
5.2. Summary of $\mu^{142}\text{Nd}$ isotopic composition of the analysed rocks	104
5.3. Important findings	105
5.4. Concluding remarks	106
5.5. Future Studies	106
