1. Introduction.....	1
1.1. Nitrogen cycle.....	2
1.2. Nitrate as a pollutant.....	3
1.3. Denitrification.....	3
1.3.1. Enzymes and genes involved in denitrification.....	4
1.3.2. Regulation of denitrification in bacteria.....	5
1.3.3. Environmental factors affecting denitrification.....	6
1.3.4. Distribution of denitrifying bacteria.....	6
1.4. Biofilm.....	10
1.4.1. Development of biofilm.....	11
1.4.1.1. Attachment.....	11
1.4.1.2. Microcolony formation.....	12
1.4.1.3. Matured biofilm.....	13
1.4.1.4. Dispersal.....	14
1.4.2. Environmental cues for biofilm formation.....	15
1.4.3. Significance of biofilm formation.....	17
1.4.4. Methods used to study biofilms.....	18
1.5. References.....	19
2. Composition of denitrifying bacteria in activated sludge and the denitrifying activity of selected isolates.....	32
2.1. Introduction.....	33
2.2. Materials and methods.....	34
2.2.1. Activated sludge samples.....	34
2.2.2. Most probable number (MPN) of denitrifiers.....	34
2.2.3. Isolation, screening and identification of denitrifying bacteria.....	36
2.2.4. Amplified Ribosomal DNA Restriction analysis (ARDRA).....	36
2.2.5. Denitrification Experiments.....	36

2.2.6.	Analytical methods.....	37
2.2.7.	DNA extraction from sludge samples.....	38
2.2.8.	Quantitative real time PCR.....	39
2.2.9.	Clone library construction and RFLP analysis.....	39
2.2.10.	Nucleotide sequence accession numbers.....	40
2.3.	Results.....	40
2.3.1.	Abundance of denitrifying bacteria in the activated sludge samples.....	40
2.3.1.1.	Abundance of culturable denitrifying bacteria.....	40
2.3.1.2.	Abundance of total denitrifying bacteria.....	40
2.3.2.	Diversity of denitrifying bacteria in different activated sludge samples.....	43
2.3.2.1.	Cultivation of denitrifying bacteria.....	43
2.3.2.2.	Amplified ribosomal DNA restriction analysis (ARDRA) of the isolated denitrifying bacteria.....	43
2.3.2.3.	<i>nosZ</i> gene diversity in the fertilizer factory activated sludge samples.....	46
2.3.3.	Denitrification pattern of the denitrifying bacterial isolates.....	48
2.3.3.1.	Denitrification between <i>Paracoccus</i> sp. W1b and <i>Diaphorobacter</i> sp. D1.....	48
2.3.3.2.	Influence of carbon to nitrogen (C/N) ratio on denitrification by the isolates.....	49
2.3.3.3.	High nitrate denitrification by <i>Paracoccus</i> sp. W1b and <i>Diaphorobacter</i> sp. D1.....	55
2.3.3.4.	Denitrification pattern of the isolates cultivated from the DaS, GS, WL and NL sludge samples.....	56
2.4.	Discussion.....	59
2.4.1.	Abundance and diversity of the denitrifying bacteria in different activated sludge samples.....	59
2.4.2.	Denitrification activity in the cultures isolated from activated sludge.....	62
2.5.	References.....	64
2.6.	Appendix.....	70
3.	Characterization of <i>Paracoccus</i> sp. W1b biofilm.....	77
3.1.	Introduction.....	78

3.2. Materials and methods.....	79
3.2.1. Bacterial strain and culture conditions.....	79
3.2.2. Plackett-Burman statistical design to screen nutrient components influencing biofilm.....	79
3.2.3. Microtiter plate assay for biofilm formation.....	81
3.2.4. Confocal microscopy and image analysis.....	81
3.2.5. Environmental scanning electron microscopy (ESEM).....	82
3.2.6. Biofilm experiments with chelator treatment.....	82
3.2.7. Bacterial adherence to hydrocarbons (BATH) assay.....	83
3.2.8. Fatty acid methyl esters (FAME).....	83
3.3. Results.....	84
3.3.1. Biofilm formation by <i>Paracoccus</i> sp. W1b.....	84
3.3.2. Nutrients influence biofilm formation.....	85
3.3.3. Nutrients modulate biofilm architecture.....	86
3.3.4. Ca ⁺⁺ and Mg ⁺⁺ affect the biofilm architecture differentially.....	88
3.3.5. Ca ⁺⁺ and Mg ⁺⁺ - induced biofilm demonstrate enhanced denitrification activity.....	96
3.3.6. Chelator treatment reveals importance of divalent cations in biofilm development.....	97
3.3.7. Cell Surface Hydrophobicity decreases at higher magnesium concentration.....	101
3.3.8. Composition of the cellular fatty acids differs among the subpopulations of <i>Paracoccus</i> sp W1b.....	102
3.3.9. Influence of the nitrogenous oxides on <i>Paracoccus</i> sp. W1b biofilm.....	102
3.4. Discussion.....	106
3.5. References.....	112
4. Influence of the carbon sources on the biofilm community in the denitrifying conditions.....	117
4.1. Introduction.....	118
4.2. Materials and methods.....	118
4.2.1. Reactor description.....	118
4.2.2. DNA extraction from the biofilm.....	119
4.2.3. Quantitative Real time PCR.....	120

4.2.4.	PCR - Denaturing Gradient Gel Electrophoresis (DGGE).....	120
4.2.5.	Fluorescent <i>in Situ</i> Hybridization (FISH).....	121
4.2.6.	Image analysis.....	121
4.3.	Results and Discussion.....	122
4.3.1.	Carbon sources influence nitrate reducing activity of the biofilm.....	122
4.3.2.	Abundance of denitrifying bacteria in the biofilm influenced by different carbon sources.....	123
4.3.3.	The emergent biofilm architecture in different carbon sources.....	127
4.3.4.	Biofilm community structure in different carbon sources.....	129
4.3.5.	<i>Pseudomonas</i> sp. dominates the biofilm by colonizing the surface initially.....	133
4.3.6.	Increasing nitrate concentrations increase <i>Paracoccus</i> sp. in the community biofilm.....	136
4.4.	References.....	140
