

## Acknowledgements

I would like to express my gratitude for my supervisor, Prof. G. Archana. The learning through my time as her PhD student has been an enriching experience. Her approach to the process of science and her high standards for the quality in every aspect of it are some of the most valuable outcomes I'll carry with me for the rest of my career in science. I have been extremely fortunate for her very supportive nature and for all the freedom I had — of trying out my ideas and independence in terms of my work. I am especially thankful for the way she held our discussions even when I'd argue relentlessly and she'd still patiently listen and agree or dismiss with equal calmness. Ma'am, thank you!

I'd like to thank members of my doctoral committee, Prof. Anuradha Nerurkar and Prof. G. Naresh Kumar for their thoughtful criticism of my work and useful suggestions as the work advanced from ideas to experiments.

I am thankful to all the teachers of the Department of Microbiology and Biotechnology Centre, MSU for their suggestions during my presentations and for their cooperation during my time as a Temp. Asst. Prof. in the department. An extra 'Thank you' to Dr. Nandita Baxi for unexceptionally exchanging B.Sc. classes with me when I was busy with thesis or work! I'd also like to thank Dr. Vihang Thite, Akhil and Shubhangi - my former and current fellow TAP's for their cooperation and understanding.

I'd have lost more hair by physical forces of my own hands than by the biological ageing, in the course of my PhD if it wasn't for the coolest and the loveliest labmates I've had. The longest shared lab-time was spent with Sneha, Shweta and Siddhi- it was surely some of the best time spent in the lab. I thank them for everything— listening to my rants about anything ranging from toilet smells to national politics; the scientific discussions; the life and existential discussions; the music jams; the garba; the random overnight trip; Pawagadh trip; birthday celebrations and on and on! I thank them for taking care of me and inspiring me and pushing me. The paths also crossed with Jagat sir, Anoop sir, Ashtaad, Reshma, Yasasvini and Aditi. I'm thankful that these supportive and lovely people were around to share food, fun and frustrations! 90DA chai for the world!!

I have been fortunate to have associated with some great M.Sc. students for their dissertation work. I've grown with them as a practitioner of science. I thank Swetha, Amit, Anindya, Ruth, Aparajita, Rajvi and Jay.

I'd also like thank research scholars from other labs for their help when I was stuck or the occasional sharing of blues! Thank you, Ruchi ma'am, Murali sir, Subbu sir, Priyadarshan sir, Radhika ma'am, Jigar bhai, Anuja, Jaswinder, Vihang, Mihir, Mansi, Roshni, Abhi, Nirali, Hasmata, Siddhi Desai, Divya, Hiral, Juliya, Khyati, Anand Parnandi and everyone else!

A big thank you to Shirish sir— I could always rely on him for anything administrative of any kind. Thanks to Aparna ma'am, I could find random strains I needed.

I'd like to thank all the teachers of Dept. of Biochemistry, MSU, esp. Dr. Shashikant Acharya for stimulating scientific discussions and chai-talks. I am also thankful to Dr.

Jayashree Pohnerkar for her help during my cloning experiments including for troubleshooting advice, and for digging out the E. coli ET12567 glycerol stock from her treasures. I acknowledge Prof. G. Naresh Kumar for providing eGFP ORF.

I'd like to acknowledge Dr. Vlahovicek, (Uni. of Zagreb, Croatia) for kindly sending pBBR- series vectors. I'm thankful to Dr. Nisha Tak (JNVU, Rajasathan) for sending recA primers in urgency for my manuscript!

I am thankful to the farmers of fields around Vadodara for letting me uproot some of their plants for isolation work. I am thankful to Vikram Sarabhai Inst. of Cell and Molecular Biology, MSU for CLSM facilities, IITB, Mumbai, India for SEM facilities and CDRI, Lucknow, India for LC-MS/MS.

I am thankful to UGC, New Delhi, India for fellowships, DBT (MoST, Gol, India) and CICS, INSA, India for travel fellowship to support presentation of work at overseas conference.

I acknowledge European Molecular Biology Organization for supporting my research stint at Weizmann Institute of Science, Israel. In that regard, I am thankful to Prof. Asaph Aharoni, his lab members and the staff at WIS for a stimulating, enriching and fun time there.

I am extremely fortunate to have my family around. I am thankful to my wife, Sonam, for taking care of every small need I had and for taking up so many of my responsibilities on herself for an elongated period time during thesis and manuscript writing. I am very grateful for her inputs in the thesis writing and correction process—having extra pair of eyes and hands—as sharp and efficient as hers—was a relief. I am thankful for my parents for understanding and supporting me during my PhD and for all the love and care all the time. I dedicate this work to my parents.

I am also thankful to friends outside the dept. building and uni. for discussions over wide areas of things and sharing my frustrations! Thank you, Chintan, Pranav, Nirja, Sanket.

I am thankful to A l e x a n d r a E l b a k y a n! Without what she does, I'd have spent huge time writing emails requesting reprints!

I am thankful to the god, for I still believe, even if I thought I was overlooked, I was being looked over, and my apologies dear god, for looking up at heavens and yelling expletives every time MSWord thought I wanted to shake things a bit in the document when I moved an image by 5 pixels.

Paths crossed, during these years, with many intelligent, and compassionate people. I apologize if I missed their names here but you've influenced me and I'm thankful for that.

*Jitendra Gosai*
