**List of Tables**

Table 2.1 Name of the fungi and accession number of ITS sequences submitted to genebank, used in the present study. Similarity with sequences in NCBI and <i>Fusarium</i> MLST database .....	68
Table 2.2 Similarity of TEF sequences of isolates used in present study with existing sequences in NCBI and <i>Fusarium</i> MLST database .....	71
Table 3.1: The genes investigated in current study, their known function and primers used for qRT-PCR .....	93
Table 3.2: Specific activity of extracted proteases from <i>Fusarium</i> spp. at different pH using Azocasein assay .....	99
Table 3.3: % residual activity of proteases in presence of inhibitors (EDTA, PMSF and Pepstatin A) by using azocasein assay .....	102
Table 3.4: Protease identified from FSSC isolate Cs1 by HRLC-MS/MS (orbitrap) in exoproteome and after column purification .....	116
Table 4.1: The genes investigated in the current study, their known functions, and the primers used for quantitative real-time polymerase chain reaction ..	144
Table 4.2: Initial fungal dry weight and yield of crude $\beta$ -glucan extracted from <i>Fusarium</i> isolates .....	147
Table 4.3: Quantification of $\beta$ -1,3-glucan and total $\beta$ -glucan in <i>Fusarium</i> isolates using ELISA and Congo red assay .....	149
Table 4.4: Functional group and their corresponding absorption frequencies in FTIR spectra of $\beta$ -glucan .....	153
Table 5.1: Summarised table for presence and absence of ZEA and T2 toxin in <i>Fusarium</i> isolates based on TLC .....	201
Table 5.2: Concentration of ZEA toxin in crude toxin extracted from pathogenic isolates .....	207
Table 6.1: Different solvent systems were used to separate and to characterize the naphthoquinone pigment.....	219
