Chapter	Page No.
LIST OF TABLES	i
LIST OF FIGURES	ii – iv
LIST OF ABBREVIATIONS	v - vi
ABSTRACT	vii - viii
REVIEW OF LITERATURE	1 - 35
1. Rice blast disease	
2. Rice blast fungus as a model system to study plant pathogen interaction	
3. Infection cycle and appressorium development	
4. Root infection by <i>M. grisea</i>	
5. Nitrogen starvation of <i>M. grisea</i>	
6. Melanin production and deficiency	
7. Extracellular enzymes in penetration	
8. Fungal laccases – Introduction	
9. Occurrence and location	
10. Laccase-catalysed reactions	
11. Classification according to substrate specificity	
12. Structure of laccase enzymes - Studies of purified enzymes	
13. Active site	
14. Active site exceptions	
15. cDNA and gene sequences	
16. Mutagenesis of the active site	

17. Applications of laccase in biotechnology
18. Antisense repression as a method to alter gene function
19. RNA interference (RNAi) as a method to alter gene function

PRESENT STUDY: Analysis of pathogenicity in *Magnaporthe grisea* 36

1. INTRODUCTION	37- 39
2. MATERIALS AND METHODS	40 - 70
2.1 Media and culture conditions	
2.2 Bacterial strains	
2.3 Yeast strains	
2.4 Fungal cultures	
2.5 Competent cell preparation and transformation of <i>E. coli</i> with plasmid DNA	
2.6 Transformation of <i>S. cerevisiae</i> with plasmid DNA	
2.7 Isolation of plasmid DNA	
2.8 Nucleic acid manipulations	
2.9 Heterologous expression of <i>MgLac1</i> and <i>MgLac2</i> in <i>Saccharomyces cerevisiae</i>	
2.10 Enzyme purification	
2.11 Thrombin protease cleavage	
2.12 Raising antibodies against <i>MgLac1</i> and <i>MgLac2</i>	
2.13 Protein extraction and western blotting	
2.14 Enzyme assays	
2.14.1 ABTS assay method for laccase	
2.14.2 Syringaldazine assay method for laccase	
2.15 Substrate specificity	

- 2.16 Inhibition studies
- 2.17 pH optimum
- 2.18 Temperature optimum and thermostability
- 2.19 Lignin degradation potential
- 2.20 DHN polymerisation potential
- 2.21 Iron oxidase activity of recombinant laccase
- 2.22 Construction of *Mglac1* antisense vector
- 2.23 Construction of *Mglac2* antisense vector
- 2.24 *Agrobacterium tumefaciens* mediated transformation of *M. grisea*
- 2.25 DNA extraction and Southern blot analysis
- 2.26 Total RNA extraction and RT-
- 2.27 Quantitative real-time RT-PCR
- 2.28 Phenotypic characterisation of the knock-down transformants
 - 2.28.1 Growth and conidiation
 - 2.28.2 Appressorial assay
 - 2.28.3 Appressorial assay
- 2.29 Infection assays
- 2.30 Penetration assay
- 2.31 Sensitivity assays
- 2.32 Cellular lipid staining by Nile Red
- 2.33 Protoplast production assay
- 2.34 X-ray fluorescence spectroscopy
- 2.35 Preparation of dsRNA and siRNA
- 2.36 Protoplasts transformation of *M. grisea*
- 2.37 Transmembrane span prediction

- 3.1. Bioinformatics analysis
- 3.2. Expression profiling of Multicopper Oxidases of *M. grisea*
- 3.3. Blast two sequence results
- 3.4. Heterologous expression and purification of *MgLac1* and *MgLac2*
- 3.5. Localisation of *MgLac1* and *MgLac2*
- 3.6. Substrate specificity
- 3.7. Inhibition Studies
- 3.8. Optimum temperature and thermostability
- 3.9. Optimum pH
- 3.10. Lignin degradation potential
- 3.11. DHN polymerisation potential and ferroxidase activity
- 3.12. Development of *MgLac1* and *MgLac2* antisense vector constructs
- 3.13. *Agrobacterium tumefaciens* mediated transformation of *M. grisea*
- 3.14. Southern blot analysis
- 3.15. Expression of *MgLac1* and *MgLac2* in knockdown transformants at transcript level
- 3.16. Phenotypic characterisation of *MgLac1* knockdown transformants
- 3.17. Sensitivity assays of *MgLac1* knockdown transformants
- 3.18. Profile of laccase activity in B157 and *MgLac1* knockdown transformants
- 3.19. Phenotypic characterisation of *MgLac 2* knockdown transformants
- 3.20. Infection assays of *MgLac 2* knockdown transformants
- 3.21. Sensitivity assays of *MgLac 2* knockdown transformants
- 3.22. Lipid mobilisation
- 3.23. Profile of laccase activity in B157 and *MgLac2* knockdown transformants
- 3.24. Expression of other multicopper oxidases in the knockdown transformants
- 3.25. dsRNA and siRNA preparation of five multicopper oxidases

3.26. siRNA based protoplast transformation of *M. grisea*

3.27. *MGG_07771.5* has a transmembrane domain

4. DISCUSSION

124 – 132

4.1 Enzyme Activity

4.2 pH optimum studies

4.3 Optimum temperatures and thermal stability studies

4.4 Inhibition studies

4.5 Other biochemical properties of *MgLac2*

4.6 *Agrobacterium tumefaciens* mediated transformation of *M. grisea*

4.7 RNA silencing

4.8 Simultaneous silencing of homologous genes in the genome

4.9 Antisense as a feasible alternative to existing systems for exploring gene function in filamentous fungi

4.10 Characterisation of knockdown transformants

4.11 *MGG_07771* is a membrane protein

CONCLUSIONS

133
