Abstract	1
Chapter 1	4
Introduction and literature review	4
1.1. Non-renewable and renewable energy sources: Current status in India:	5
1.2. Biofuel:	5
1.2.1. Solid Biofuels:.....	6
1.2.2. Liquid Biofuels:	7
1.2.3. Gaseous biofuels:	9
1.3. Plant cell wall and its' lignocellulosic components:	9
1.4. Structural components of lignocellulose biomass:.....	12
1.4.1. Lignin:.....	12
1.4.2. Cellulose:	13
1.4.3. Hemicelluloses:	14
1.4.4. Pectin:.....	14
1.5. Structural complexities of carbohydrates in plants:	16
1.6. Sugarcane stem anatomy:.....	17
1.7. Biomass saccharification by different enzymes:	18
1.7.1. Cellulase:.....	18
1.7.2. Xylanase:.....	19
1.7.3. Pectinase:	20
1.8. Microbial sources of hydrolases:	21
1.8.1. <i>Bacillus</i> spp. as source of polysaccharide degrading enzymes:	22
1.9. Polysaccharide hydrolases and their synergism in lignocellulose saccharification:	24
1.10. Biomass pretreatment methods:	25
Rationale and Objectives	30
Rationale:	31
Objectives:	32
Chapter 2	33
Isolation, screening and identification of bacterial isolates for production of plant polysaccharide hydrolyzing enzymes	33

2.1. Introduction:.....	34
2.2. Materials and Methods:.....	37
2.2.1. Chemicals, crude polysaccharide sources and bacterial type strains:	37
2.2.2. Sampling for isolation of polysaccharide hydrolase producer bacteria:	37
2.2.3. Enrichment and isolation from collected samples:	37
2.2.3.1. Enrichment of polysaccharide hydrolase producing bacteria:.....	38
2.2.3.2. Preparation of Winogradsky column:	38
2.2.3.3. Isolation of polysaccharide hydrolase producing bacteria:	38
2.2.4. Primary screening of isolates for polysaccharide hydrolase production:	39
2.2.4.1. Screening of xylanase producers:.....	39
2.2.4.2. Screening of pectinase producers:.....	39
2.2.4.3. Screening of cellulase producers:.....	39
2.2.5. Secondary screening of the isolates for xylanase-pectinase production:	39
2.2.5.1. Media for qualitative screening of xylanase and pectinase:	40
2.2.5.2. Xylanase Activity:.....	40
2.2.5.3. Pectinase Activity:	40
2.2.6. Screening based on colony and cell morphology:.....	41
2.2.7. Molecular characterization:.....	41
2.2.7.1. Genomic DNA extraction:	41
2.2.7.2. 16S rRNA gene amplification and analysis:	42
2.2.7.2a. Amplified ribosomal DNA Restriction Analysis (ARDRA):.....	42
2.2.7.2b. 16S rRNA gene sequence analysis:.....	43
2.2.7.2c. 16S rRNA gene analysis for type strains:.....	43
2.2.7.3. <i>gyrB</i> gene amplification and analysis:.....	43
2.2.7.3a. Restriction Fragment Length Polymorphism (RFLP) analysis:	44
2.2.7.3b. <i>gyrB</i> gene sequence analysis:.....	44
2.2.7.4. Sequence submission:	45
2.2.8. Phenotypic characterization:	45
2.2.8.1. Growth phenotypes at various physicochemical parameters:	45
2.2.8.2. Biochemical characterization of selected isolates:	45
2.2.8.3. Antibiotic sensitivity test:.....	46
2.2.9. Screening based on xylanase and pectinase activities in different pH and temperature conditions:.....	46
2.2.9.1. Xylanase and pectinase activities at different pH:	46
2.2.9.2. Xylanase and pectinase activities at different temperatures:.....	46
2.2.10. Characterization of selected isolates:	46
2.2.10.1. Scanning electron microscopy (SEM):	46
2.2.10.2. Time course production of xylanase-pectinase enzymes:	47

2.2.10.3. Growth curve:.....	47
2.2.11. Strain deposition:	47
2.2.12. Data analysis:	47
2.3. Results and Discussion:	48
2.3.1. Sample collection, enrichment and isolation:	48
2.3.2. Primary screening of isolates producing polysaccharide hydrolase:.....	51
2.3.2.1. Screening of xylanase producing bacteria:.....	51
2.3.2.2. Screening of pectinase producing bacteria:.....	53
2.3.2.3. Screening of cellulase producing bacteria:.....	53
2.3.3. Quantitative screening of xylanase-pectinase producing bacteria:	55
2.3.4. Morphological and microscopic characterization of isolates:	58
2.3.5. Genotypic characterization of selected isolates:	60
2.3.5.1. Characterization by 16S rDNA analysis:	60
2.3.5.1a. ARDRA analysis:.....	60
2.3.5.1b. 16S rRNA gene sequence analysis:.....	62
2.3.5.2. <i>gyrB</i> gene analysis:	65
2.3.5.2a. RFLP analysis of <i>gyrB</i> gene:.....	65
2.3.5.2b. <i>gyrB</i> gene sequence analysis:.....	66
2.3.5.3. Sequence submission:	67
2.3.6. Phenotypic characterization:	67
2.3.6.1. Growth phenotypes:	68
2.3.6.2. Biochemical phenotypes:	68
2.3.6.3. Antibiotic sensitivity test:.....	70
2.3.7. Screening of the isolates based on xylanase and pectinase activity at various incubation conditions:	71
2.3.7.1. Crude xylanase and pectinase activities of selected seven <i>Bacillus</i> isoaltes at various pH conditions:	71
2.3.7.2. Crude xylanase and pectinase activities of selected seven <i>Bacillus</i> isolates at various temperatures:	73
2.3.8. Characterization of selected three isolates <i>B. safensis</i> M35, <i>B. altitudinis</i> R31 and <i>B. altitudinis</i> J208:	73
2.3.8.1. Time course studies for production of xylanase and pectinase:	73
2.3.8.2. Growth pattern:	74
2.3.9. Strain submission:	76
Chapter 3	77
Synergism of crude xylanases and/or pectinases with commercial cellulase in enzyme cocktail mediated saccharification of raw agrowaste biomass	77
3.1. Introduction:.....	78
3.2. Materials and Methods:.....	80

3.2.1. Chemicals, crude polysaccharide substrates, enzymes and their producers:	80
3.2.2. Enzyme production for cocktail mediated biomass saccharification:	81
3.2.2.1. Media for enzyme production under submerged fermentation:	81
3.2.2.2. Protein estimation by Bradford method:	81
3.2.3. Agrowaste biomass saccharification by enzyme cocktails:	81
3.2.3.1. Estimation of reducing sugar during agrowaste saccharification:.....	82
3.2.3.2. Calculation of % Saccharification and Degree of Synergism (DS):	82
3.2.4. Structural analysis of raw and enzyme hydrolyzed biomass:.....	83
3.2.4.1. Scanning Electron Microscopy (SEM):	83
3.2.4.2. Fourier Transformed Infrared (FTIR) Spectroscopy:.....	83
3.2.5. Data Analysis:	83
3.3. Results and Discussion:	84
3.3.1. Saccharification of raw agrowaste biomass by individual xylanases, pectinases and commercial cellulase:.....	84
3.3.2. Saccharification of raw agrowaste biomass by different cocktail combinations of xylanases, pectinases and commercial cellulase:	86
3.3.2.1. Saccharification of raw agrowaste biomass by cellulase-xylanase (CX) and cellulase-pectinase (CP) cocktail:	86
3.3.2.2. Saccharification of agrowaste biomass by pectinase-xylanase (PX) cocktail: 91	
3.3.2.3. Saccharification of biomass by three enzyme cocktail CPX:.....	93
3.3.3. Saccharification of agrowaste biomass by 1N HCl:.....	95
3.3.4. Structural analysis of raw BH, SCB and WH treated with a cocktail containing commercial cellulase and/or xylanase and pectinase enzymes from <i>B. altitudinis</i> J208: 96	
3.3.4.1. Scanning Electron Microscopy (SEM) analysis of raw biomass before and after enzymatic hydrolysis:	96
3.3.4.2. Fourier Transformed Infrared (FTIR) spectroscopic analysis of raw and enzymatically treated substrate biomass:	100
Chapter 4	104
Physicochemical pretreatment of sugarcane bagasse for biomass deconstruction.....	104
4.1. Introduction:.....	105
4.2. Materials and Methods:.....	107
4.2.1. Chemicals, plant biomass, crude polysaccharide substrates, enzymes and their producer strains:.....	107
4.2.2. Estimation of reducing sugar and calculation of % saccharification:	107
4.2.3. Preparation of sugarcane bagasse (SCB) for pretreatment:.....	107
4.2.4. Pretreatment of SCB biomass:	108
4.2.5. Effect of pretreatment:	110
4.2.5.1. Analysis of filtrate for released soluble reducing sugars:	110
4.2.5.1a. Estimation of reducing sugar:.....	110

4.2.5.1b. Thin Layer Chromatography (TLC) and High-Performance Liquid Chromatography (HPLC) analysis:.....	110
4.2.5.2. Analysis of pretreated biomass:	111
4.2.5.2a. Gravimetric analysis:.....	111
4.2.5.2b. Fourier-Transformed Infrared Spectroscopy (FTIR):	111
4.2.5.2c. Scanning Electron Microscopy (SEM):.....	112
4.2.6. Enzyme preparation for saccharification studies:	112
4.2.7. Accessibility of polysaccharides from pretreated biomass for their enzymatic saccharification:	112
4.2.7.1. Estimation of reducing sugar in enzymatic hydrolysate of PSCB biomass: .	112
4.2.7.2. Fluorescence microscopic analysis of pretreated biomass anatomy during cellulase activity:.....	113
4.2.8. Data analysis:	114
4.3. Results and Discussion:	114
4.3.1. Factors governing pretreatment process:.....	114
4.3.2. Morphological changes in SCB:	116
4.3.3. Biochemical analysis of filtrate for SRS:.....	118
4.3.4. Gravimetric analysis of pretreated biomass:	120
4.3.5. Analysis of soluble components other than SRS released from SCB:	124
4.3.6. Structural analysis of PSCB biomass:.....	125
4.3.6.1. FTIR spectroscopic analysis of SCB biomass:.....	125
4.3.6.2. Scanning Electron Microscopy of SCB biomass:	127
4.3.7. Studies on amenability of the pretreated biomass to enzymatic saccharification: 130	
4.3.7.1. Accessibility of PSCB cellulose to cellulase for saccharification:.....	130
4.3.7.2. Accessibility of pretreated biomass hemicellulose to M35, R31 and J208 xylanases for saccharification:	131
4.3.7.3. Accessibility of pretreated biomass hemicellulose to M35, R31 and J208 pectinase for saccharification:	133
4.3.7.4 Brightfield and fluorescent microscopic studies on cellulase mediated changes in cell wall anatomy of SCB biomass:	136
Chapter 5	145
Enzyme cocktail mediated saccharification of pretreated sugarcane bagasse (PSCB) .145	
5.1. Introduction:.....	146
5.2. Materials and Methods:.....	147
5.2.1. Chemicals, plant biomass, crude polysaccharide substrates, enzymes and their producer strains:.....	147
5.2.2. Enzyme preparation for saccharification studies:	148
5.2.3. Enzyme cocktail mediated saccharification of PSCB biomass:.....	148
5.2.3.1. Additive saccharification studies with cocktail of commercial cellulase and/or xylanases and/or pectinases from individual isolate:	149

5.2.3.2. Substitutive saccharification studies with cocktail of commercial cellulase and/or xylanases and/or pectinases from all isolates:.....	149
5.2.3.3. Estimation of reducing sugar from cocktail hydrolysate and calculation of degree of synergism (DS):	149
5.2.4. Structural analysis of CPX cocktail treated PSCB biomass:.....	150
5.2.4.1 Scanning Electron Microscopy (SEM):	150
5.2.4.2. Fourier Transformed Infrared Spectroscopy (FTIR):.....	150
5.2.5. Data analysis:	151
5.3. Results and Discussion:	151
5.3.1. Additive saccharification studies with different cocktails of C, M35, R31 and J208 P and M35, R31 and J208 X enzymes:	151
5.3.1.1. Saccharification of PSCB biomass by additive PX cocktails:.....	151
5.3.1.2. Saccharification of PSCB biomass by additive CX cocktails:	153
5.3.1.3. Saccharification of PSCB biomass by CP cocktails:.....	156
5.3.1.4. Saccharification of PSCB biomass by CPX cocktail:	158
5.3.1.5. Synergism in saccharification for different cocktail combinations:	160
5.3.2. Compatibility in substitutive cocktails of M35, R31 and J208 xylanases or pectinases:	164
5.3.3. Substitutive saccharification studies with different cocktails of commercial cellulase and M35, R31 and J208 pectinase and M35, R31 and J208 xylanases.	164
5.3.4. Structural analysis of PSCB biomass before and after treatment with commercial cellulase and substituted CPX cocktail:	167
5.3.4.1. FTIR analysis of enzyme hydrolysed PSCB biomass samples:	167
5.3.4.2. SEM analysis of enzyme hydrolysed PSCB biomass samples:.....	169
Chapter 6	173
Studies on physicochemical properties of crude M35, R31 and J208 Xylanases (Xylan hydrolases)	173
6.1. Introduction:.....	174
6.2. Materials and Methods:.....	174
6.2.1. Chemicals, crude polysaccharide substrates, enzymes and their producers:	174
6.2.2. Media for enzyme production under submerged fermentation:	175
6.2.3. Enzyme activity assays:	175
6.2.3.1. Hydrolase activity:	176
6.2.3.1a. Xylanase activity:	176
6.2.3.1b. Polygalacturonase (Polygalacturonic acid hydrolase or PGase) activity: ...	176
6.2.3.1c. Cellulase (Filter paper hydrolase or FPase) activity:.....	176
6.2.3.2. Lyase activity:	176
6.2.3.3. Protein estimation by Bradford method:	177
6.2.4. Substrate specificity for crude xylanases and pectinases:	177

6.2.4.1. Substrate specificity of xylanases:	177
6.2.4.2. Substrate specificity of pectinases:	177
6.2.5. SDS-PAGE and activity staining of xylanases and pectinases:	178
6.2.5.1. Zymogram of xylanases:	178
6.2.5.2. Zymogram of pectinases:	178
6.2.6. Kinetic studies for xylan hydrolysis by xylanases:	178
6.2.7. Effect of temperature and pH on activities of xylanases:.....	179
6.2.8. Effect of temperature on stability of xylanases:.....	181
6.2.9. Effect of pH on stability of xylanases:.....	182
6.2.10. Mode of action of xylanases:	182
6.2.10.1. Relative flow rate and viscosity analysis:	182
6.2.10.2. End-product analysis through chromatography:	183
6.2.11. Effect of various chemical modulators on xylanase activities:	184
6.2.12. Data Analysis:	184
6.3. Results and Discussion:	185
6.3.1. Analysis of enzyme activities in crude CFS:	185
6.3.2. Substrate specificity studies:	186
6.3.2.1. Activity of crude xylanases on xylan:	186
6.3.2.2. Activity of crude pectinases on pectic substrates:.....	187
6.3.3. SDS-PAGE-Zymogram analysis of crude xylanases and pectinases:.....	189
6.3.3.1. Zymogram analysis of xylanases:	190
6.3.3.2. Zymogram analysis of pectinases:	191
6.3.4. Enzyme kinetic studies for xylanases:	192
6.3.5. Effect of temperature and pH on activity of xylanases:	193
6.3.6. Effect of temperature on stability of xylanases:.....	197
6.3.7. Effect of pH on stability of xylanases:.....	199
6.3.8. Mode of action of crude xylanases:	201
6.3.9. Chromatographic analysis of end-products of xylanases:.....	203
6.3.9.1. TLC analysis:	203
6.3.9.2. HPLC analysis:.....	203
6.3.10. Effect of modulators on xylanase activity:.....	205
Chapter 7	208
Selection and optimization of inducer substrate(s) in medium for concurrent production of xylanase-pectinase enzymes	208
7.1. Introduction:.....	209
7.2. Materials and Methods:.....	210
7.2.1. Chemicals, bacterial strains and crude polysaccharide substrates:	210
7.2.2. Influence of different substrates amended in BHM-YEP medium on production of	

xylanase and pectinase enzymes:	211
7.2.2.1. Measurement of growth:	211
7.2.2.2. Xylanase (Xylan hydrolase) activity:	211
7.2.2.3. Pectinase (Pectin lyase) activity:	211
7.2.2.4. Protein estimation:	212
7.2.3. Screening for enzyme inducer substrates:	212
7.2.4. Determination of effective range of individual inducer substrates:	212
7.2.5. Cumulative effect of inducer substrates on enzyme production:	212
7.2.6. Use of Response Surface Method (RSM) for optimization of crude inducer substrate(s) concentration for xylanases and pectinases production:	213
7.2.7. Validation of optimized parameters for concurrent production of xylanase- pectinase enzymes:	214
7.2.8. Kinetic characteristics for enzyme production:	214
7.2.9. Data Analysis:	214
7.3 Results and Discussion:	214
7.3.1. Growth and production of xylanases and pectinases on different substrates by <i>Bacillus</i> isolates:	215
7.3.1.1. Growth on glucose and different polysaccharide substrates:	215
7.3.1.2. Production of xylanase on glucose and polysaccharide substrates:	215
7.3.1.3. Production of pectinase on glucose and polysaccharide substrates:	215
7.3.2. Screening of better enzyme inducer substrate(s):	219
7.3.3. Enzyme production kinetics on plant polysaccharide substrates:	221
7.3.4. Influence of different concentrations of WB and CP for xylanase and pectinase production:	222
7.3.5. Cumulative effect of WB and CP on concurrent xylanase and pectinase production:	225
7.3.6. Optimization of inducer substrate concentration on enzyme production:	226
7.3.7. Xylanase and pectinase response obtained from the CCD experiment:	228
7.3.8. Optimization, point prediction and validation of predicted points:	230
Appendix	237
Appendix-I: Extended phylogenetic trees:	238
Appendix -II: Statistical analysis and model diagnostic plots for inducer substrate optimization using CCD-RSM:	239
Summary	258
Conclusion	272
