Abstract	I
Certificate	III
Acknowledgement	IV
Content	V
List of Tables	IX
List of Figures	XI
Notations	XIV
Abbreviations	XVI

1. INTRODUCTION

1.1	General	1
1.2	Review of Advances in Hardware and Networking	2
1.3	Classifications of Computer Architectures	5
1.4	Performance Evaluation of Computer System	8
1.5	Numerical Algorithms and Computational Strategies	8
1.6	Algorithms for Structural Analysis and Design	11
1.7	Latest Trends in High Performance Computing	13
1.8	Scope and Objectives of Present Work	17
1.9	Organization of Thesis	19

2. LITERATURE REVIEW

2.1	Introduction	22
2.2	General Aspects of Parallel and Distributed Processing	23
2.3	Substructure Technique and Other Algorithms	27
2.4	Applications of Linear Analysis of Skeletal Structures	32
2.5	Dynamic and Nonlinear Analysis of Skeletal Structures	34
2.6	Static Finite Element Analysis of Continuum Structures	37
2.7	Dynamic and Nonlinear F E Analysis of Continuum Structures	41
2.8	Structural Optimization Applications	45
2.9	Parallel Processing in Neural Networks	49
2.10	Literature Related to Laminated Composite Structures	50

3. PARALLEL PROCESSING ISSUES

3.1	General	52
-----	---------	----

3.2	Tightly Coupled Multiprocessing Systems	54
3.3	Loosely Coupled Multi Computer Systems	62
3.4	Performance measurement of parallel processing	71
3.5	Choice of Distributed Computing Environment	74
4.	WEBDEDIP ENVIRONMENT	
4.1	Introduction	75
4.2	Overview of WebDedip	75
4.3	Application Development using WebDedip	77
4.4	Installation of WebDedip	86
4.5	Implementation of Application on WebDedip	89
4.6	WebDedip Rules	92
4.7	Advantages and Disadvantages of WebDedip	93
5.	DISTRIBUTED MATRIX ANALYSIS OF SKELETAL STRUCTURE	
5.1	General	95
5.2	Substructure Technique for Matrix Analysis of Structure	96
5.3	Substructuring in Distributed Environment	100
5.4	Example of Static Analysis of Microwave Tower	103
5.5	Discussion of Results	108
6.	DISTRIBUTED STATIC FINITE ELEMENT ANALYSIS	
6.1	General Remarks	109
6.2	The Step-By-Step FEM Procedure	109
6.3	Parallel Computing in Finite Element Method	110
6.4	Substructure Technique in Finite Element Analysis	112
6.5	Implementation over Distributed Computing Environment	117
6.6	Beam subjected to Pure Bending Example	121
6.7	A Deep Beam Example	123
6.8	A Square Plate with Circular Hole Problem	124
6.9	Transversely loaded Annular Plate Problem	130
6.10	Transversely Loaded Skew Plate Example	136
6.11	Effect of Ratio of Internal to Interface Node on Computation	140
6.12	Closing Remarks	144

7. DISTRIBUTED DYNAMIC ANALYSIS

7.1	General Remarks	145
7.2	Dynamic analysis Formulation	146
7.3	Substructure Technique in Dynamic Analysis	150
7.4	Implementation on Distributed Computing	155
7.5	A 300 - Storied Frame Example	157
7.6	Closing Remarks	161

8. TRAINING OF NEURAL NETWORKS IN WEBDEDIP ENVIRONMENT

8.1	Overview of Artificial Neural Networks	162
8.2	Selected Network and Problem	163
8.3	Data Processing in CPN	164
8.4	CPN Simulated Column Design	167
8.5	Implementation of CPN Training in Distributed Environment	169
8.6	Closing Remarks	172

9. INTERNET BASED COMPUTING USING WEBDEDIP

9.1	The Use of Internet Technology	173
9.2	Implementation of WebDedip Environment over Internet	174
9.3	Accessing Software of Remote Computer Application	177
9.4	Plane Frame Analysis Example	180
9.5	Distributed Computing Application	181
9.6	Problems Faced During Implementation	184
9.7	The Closure	184

10. OPTIMIZATION VIA DISTRIBUTED GENETIC ALGORITHM

10.1	Search for Optimum Via GA	186
10.2	Genetic Algorithms – Fundamentals	187
10.3	GA based Minimum Weight Design of Truss	188
10.4	Distributed Implementation of GA	191
10.5	Example of a Plane Truss Optimization	197
10.6	Example of a Space Truss Optimization	198
10.7	Discussion of Results	201

11. DISTRIBUTED FE ANALYSIS OF LAMINATED COMPOSITES

11.1	Opening Remarks	202
11.2	Laminated Composites – Terminology	203
11.3	Finite Element Formulation	204
11.4	Implementation in Distributed Computing Environment	214
11.5	Analysis Problem and Result	216
11.6	Closing Remarks	223

12. DISTRIBUTED GEOMETRIC NONLINEAR ANALYSIS OF PLATES

12.1	General	224
12.2	Methods for Nonlinear Analysis	225
12.3	Geometric Nonlinear Finite Element Formulation	227
12.4	Distributed Implementation of Nonlinear Analysis	233
12.5	Analysis Problem and Result	238
12.6	Summary	245

13. CONCLUSIONS AND CONTRIBUTIONS

13.1	A Recapitulation	246
13.2	Conclusions	248
13.3	Contributions	253
13.4	Future Scope	254
