
LIST OF FIGURES

Figure 2.1: Anatomical organization of human mammary gland	10
Figure 2. 2: The mammary gland development at different phases with histological structure.....	11
Figure 2. 3: Blood supply to human mammary gland.....	12
Figure 2. 4: Lymphatic supply in human mammary gland	13
Figure 2. 5: Ductal Carcinoma <i>in-situ</i> (DCIS)	14
Figure 2. 6: Lobular Carcinoma <i>in-situ</i> (LCIS).....	15
Figure 2. 7: Invasive breast carcinoma (a) Invasive ductal carcinoma (b) Invasive lobular carcinoma.....	16
Figure 2. 8: Stage I breast cancer	18
Figure 2. 9: Stage II a breast cancer	19
Figure 2. 10: Stage II b breast cancer	19
Figure 2. 11: Stage III a breast cancer.....	20
Figure 2. 12: Stage III b breast cancer.....	21
Figure 2. 13: Stage III c breast cancer.....	21
Figure 2. 14: Stage IV breast cancer	22
Figure 3. 1: <i>Butea monosperma</i> flower	39
Figure 3. 2: <i>Lycopersicon esculentum</i> fruits.....	44
Figure 3. 3: <i>Cassia fistula</i> pods	47
Figure 5.1: Effect of various extracts of <i>Butea monosperma</i> flowers on cell viability of MCF-10A human breast epithelial cell line.....	77
Figure 5.2: Effect of various extracts of <i>Lycopersicon esculentum</i> fruits on cell viability of MCF-10A human breast epithelial cell line.....	78
Figure 5.3: Effect of various extracts of <i>Cassia fistula</i> pods on cell viability of MCF-10A human breast epithelial cell line	78
Figure 5.4: Effect of various extracts of <i>Butea monosperma</i> flowers on cell proliferation of MCF-7 human breast cancer cell line	80

Figure 5.5: Effect of various extracts of <i>Butea monosperma</i> flowers on cell proliferation of MDA-MB-453 human breast cancer cell line.....	81
Figure 5.6: Effect of various extracts of <i>Butea monosperma</i> flowers on cell proliferation of MDA-MB-231 human breast cancer cell line.....	82
Figure 5.7: Effect of various extracts of <i>Lycopersicon esculentum</i> fruits on cell proliferation of MCF-7 human breast cancer cell line	83
Figure 5.8: Effect of various extracts of <i>Lycopersicon esculentum</i> fruits on cell proliferation of MDA-MB-453 human breast cancer cell line.....	84
Figure 5.9: Effect of various extracts of <i>Lycopersicon esculentum</i> fruits on cell proliferation of MDA-MB-231 human breast cancer cell line.....	85
Figure 5.10: Effect of various extracts of <i>Cassia fistula</i> pods on cell proliferation of MCF-7 human breast cancer cell line	86
Figure 5.11: Effect of various extracts of <i>Cassia fistula</i> pods on cell proliferation of MDA-MB-453 human breast cancer cell line.....	87
Figure 5.12: Effect of various extracts of <i>Cassia fistula</i> pods on cell proliferation of MDA-MB-231 human breast cancer cell line.....	88
Figure 5.13: Effect of MEBM and AEBM on growth rate in MNU induced mammary carcinogenesis.	93
Figure 5.14: Effect of MEBM and AEBM on feed consumption efficiency in MNU induced mammary carcinogenesis.	95
Figure 5.15: Representative images of tumors in model and treated groups in MNU induced mammary carcinogenesis	97
Figure 5.16: Effect of MEBM and AEBM on nucleic acid content in MNU induced mammary carcinogenesis.....	101
Figure 5.17: Effect of MEBM and AEBM on MDA levels in MNU induced mammary carcinogenesis	103
Figure 5.18: Effect of MEBM and AEBM on GSH levels in MNU induced mammary carcinogenesis	103

Figure 5.19: Effect of MEBM and AEBM on SOD levels in MNU induced mammary carcinogenesis	104
Figure 5.20: Effect of MEBM and AEBM on Catalase levels in MNU induced mammary carcinogenesis	104
Figure 5.21: Effect of MEBM and AEBM on tumor parameters in MNU induced mammary carcinogenesis.....	105
Figure 5.22: Effect of MEBM and AEBM on estrogen receptor expression in MNU induced mammary carcinogenesis.	107
Figure 5.23: Effect of MEBM and AEBM on progesterone receptor expression in MNU induced mammary carcinogenesis.	107
Figure 5.24: Effect of MEBM and AEBM on % increment or reduction in estrogen and progesterone receptor expressions in MNU induced mammary carcinogenesis.....	108
Figure 5.25: Effect of EAELE and MELE on growth rate in MNU induced mammary carcinogenesis.	110
Figure 5.26: Effect of EAELE and MELE on feed consumption efficiency in MNU induced mammary carcinogenesis.	112
Figure 5.27: Representative images of tumors in model and treated groups in MNU induced mammary carcinogenesis	114
Figure 5.28: Effect of EAELE and MELE on nucleic acid content in MNU induced mammary carcinogenesis.....	118
Figure 5.29: Effect of EAELE and MELE on MDA levels in MNU induced mammary carcinogenesis	120
Figure 5.30: Effect of EAELE and MELE on GSH levels in MNU induced mammary carcinogenesis	120
Figure 5.31: Effect of EAELE and MELE on SOD levels in MNU induced mammary carcinogenesis	121

Figure 5.32: Effect of EAELE and MELE on Catalase levels in MNU induced mammary carcinogenesis	121
Figure 5.33: Effect of EAELE and MELE on tumor parameters in MNU induced mammary carcinogenesis.....	123
Figure 5.34: Effect of EAELE and MELE on % increment or reduction in nucleic acid levels in MNU induced mammary carcinogenesis.....	123
Figure 5.35: Effect of EAELE and MELE on estrogen receptor expression in MNU induced mammary carcinogenesis.	125
Figure 5.36: Effect of EAELE and MELE on progesterone receptor expression in MNU induced mammary carcinogenesis.	125
Figure 5.37: Effect of EAELE and MELE on % increment or reduction in estrogen and progesterone receptor expressions in MNU induced mammary carcinogenesis.....	126
Figure 5.38: Effect of AECF and MECF on growth rate in MNU induced mammary carcinogenesis.	128
Figure 5.39: Effect of AECF and MECF on feed consumption efficiency in MNU induced mammary carcinogenesis.	130
Figure 5.40: Representative images of tumors in model and treated groups in MNU induced mammary carcinogenesis	132
Figure 5.41: Effect of AECF and MECF on nucleic acid content in MNU induced mammary carcinogenesis.....	136
Figure 5.42: Effect of AECF and MECF on MDA levels in MNU induced mammary carcinogenesis	138
Figure 5.43: Effect of AECF and MECF on GSH levels in MNU induced mammary carcinogenesis	138
Figure 5.44: Effect of AECF and MECF on SOD levels in MNU induced mammary carcinogenesis	139

Figure 5.45: Effect of AECF and MECF on Catalase levels in MNU induced mammary carcinogenesis	139
Figure 5.46: Effect of AECF and MECF on tumor parameters in MNU induced mammary carcinogenesis	141
Figure 5.47: Effect of AECF and MECF on % increment or reduction in nucleic acid levels in MNU induced mammary carcinogenesis	141
Figure 5.48: Effect of AECF and MECF on estrogen receptor expression in MNU induced mammary carcinogenesis.	142
Figure 5.49: Effect of AECF and MECF on progesterone receptor expression in MNU induced mammary carcinogenesis.	143
Figure 5.50: Effect of AECF and MECF on % increment or reduction in estrogen and progesterone receptor expressions in MNU induced mammary carcinogenesis.....	143
Figure 5.51: Effect of extracts on angiogenesis in the Chick Chorioallantoic Membrane of fertilized eggs.....	145
Figure 5.52: Effect of extracts on the apoptosis on MCF-7 human breast cancer cell line.....	148
Figure 5.53: Effect of extracts on the cell migration (metastasis) on MCF-7 human breast cancer cell line.....	151
Figure 5.54: Effect of extracts on the oxidative stress on MCF-7 human breast cancer cell line.	152
Figure 5.55: EAC induced solid mammary tumors in mice.....	156
Figure 5.56: Effect of MEBM, EAELE and AECF on survival rate in EAC induced solid tumors.....	157
Figure 5.57: Effect of MEBM, EAELE and AECF on liver enzymes in EAC induced solid tumors.....	160
Figure 5.58: Effect of MEBM, EAELE and AECF on cytokines levels in EAC induced solid tumors.....	162

Figure 5.59: Effect of MEBM, EAELE and AECF on lysosomal enzyme (β -Glucosidase) levels in EAC induced solid tumors	163
Figure 5.60: Effect of MEBM, EAELE and AECF on VEGF levels in EAC induced solid tumors.....	164
Figure 5.61: Effect of MEBM, EAELE and AECF on p53 Gene expressions in EAC induced solid tumors.....	165
Figure 5.62: Effect of MEBM, EAELE and AECF on Caspase-9 in EAC induced solid tumors.....	166
Figure 5.63: Effect of MEBM, EAELE and AECF on histopathology of liver and kidney in EAC induced solid tumors.....	169
Figure 5.64: Effect of MEBM, EAELE and AECF on histopathology of kidney in EAC induced solid tumors	171
Figure 5.65: Effect of MEBM, EAELE and AECF on histopathology of liver and kidney in EAC induced solid tumors.....	172
Figure 5.66: Effect of extracts on % tumor weight reduction in MNU induced mammary carcinogenesis	174
Figure 5.67: Effect of extracts on latency period in MNU induced mammary carcinogenesis.....	175
Figure 5.68: Effect of extracts on nucleic acid content in MNU induced mammary carcinogenesis	176
Figure 5.69: Effect of extracts on % increment or reduction in estrogen and progesterone in MNU induced mammary carcinogenesis	176
Figure 5.70: Effect of extracts on the apoptosis on MCF-7 human breast cancer cell line.....	178
Figure 5.71: Effect of extracts on the cell migration (metastasis) on MCF-7 human breast cancer cell line.....	178
Figure 5.72: Effect of extracts on liver enzyme levels in EAC induced solid tumors	181

Figure 5.73: Effect of extracts on cytokine levels in EAC induced solid tumors	181
Figure 5.74: Effect of extracts on β - Glucosidase levels in EAC induced solid tumors	182
