

ACKNOWLEDGEMENTS

I could spend several pages mentioning by name, each family member, teacher, friend and colleague, who has contributed to my emotional and spiritual well-being over last few years. Your support has been invaluable. However, there are a few special people, who really made this extraordinary journey a lot less complicated and more rewarding for me.

The first person I would like thank is my advisor Prof. S. S. Katyare. It is my immense pleasure and privilege to work under his kind guidance. As a dedicated scientist, humble teacher and an effective advisor, he guided my way through many phases of scientific research right from my M.Sc. years to PhD dissertation. I would like to thank sir for making me grow and develop a scientific attitude towards research. It would not have been possible for me to achieve my scientific endeavor without his constant guidance and support. His knowledge and relentless persistence for quality, honesty, completeness and integrity have been invaluable.

I would like to thank our ex- and present Heads of the Department, Prof. Tara Mehta and Dr. G. Nareshkumar, who had provided me with the scientific and departmental facilities and enabling me to finish my research work without any inconvenience. I would also like to thank my teachers at the Biochemistry Department, especially their support during my TL years, as it was of great help to balance the job and research work simultaneously.

The work would not have been possible without the support of Animal house team, Mr. Suresh Nate and Rameshbhai who has provided me with the essential resource for carrying out my experiments successfully. My immense gratitude towards my experimental rats whose life was sacrificed to carry out my research.

My special thanks to lab seniors, Dr. Kunjan Dave, Dr. Jignesh Pandya and Dr. Subhash Katewa who supported me for the initial training and techniques for my M. Sc. as well as

PhD work. Further, I would also like to thank my lab-mates Samir, Minal and Hiren who have supported and advised me throughout my tenure in the lab and created very friendly environment to work in.

My friends and fellow research scholars have always extended their help whenever I needed. I want to thank all the striving team of department research scholars for their help, support and creating very lively environment in the department. My best wishes for their future endeavors. I would also like to thank my present colleagues Shalini ma'm and Reena for supporting and guiding me to sustain during tough-times of my life by encouraging me to be optimistic. It would not be fair if I don't express my gratitude toward my buddy, brother and friend – Zainul – who always remain a great 'stand-by' support and indulged in critical discussion right from my under-graduation, post-graduation to PhD phases.

I would like to thank Mr. K M Shah (M. R. Foundation, Ahmedabad) for his initial support during PhD course.

No study of this size can be completed without disruption of one's normal family routine. This project could not have been completed without the support, encouragement, love and caring of dear mom, dad and family.

During the inevitable ups and downs of conducting this research I was often reminded of Life's true priorities by what could only be the influence of a loving almighty, thank you God!

Munjal M. Acharya
