

LIST OF FIGURES

Figure No	Title	Page No
	Chapter I, Introduction	
1	Clinical types of vitiligo	3
2	Structure of skin	4
3	Embryonic origin of melanocyte populations	5
4	Epidermal melanin unit	6
5	Structure of melanosome	7
6	Melanin synthesis pathway	8
7	The events that support neurochemical hypothesis	11
8	Endogenous sources of ROS and RNS	17
9	Lipid peroxidation mechanism	23
10	Possible cellular and humoral immune mechanism in vitiligo	31
11	Types of SNPs	36
12	Representation of reported susceptibility loci and candidate genes for vitiligo	47
	Chapter IIIA, The antioxidant status of vitiligo patients of different age groups	
1	Superoxide dismutase activity in erythrocytes of controls and vitiligo patients	102
2	Erythrocyte lipid peroxidation levels in controls and vitiligo patients	103
3	Glutathione peroxidase activity in erythrocytes of controls and vitiligo patients	104
4	Glucose 6 phosphate dehydrogenase activity in erythrocytes of controls and vitiligo patients	105
5	Whole blood GSH levels of controls and vitiligo patients	105
6	Catalase activity in erythrocytes of control and vitiligo patients	106
7	Vitamin E levels in the plasma of controls and vitiligo patients	107
8	Glutathione S transferase activity in the plasma of controls and vitiligo patients	107
9	Glutathione reductase activity in the plasma of controls and vitiligo patients	108
	Chapter IIIB, The antioxidant status of vitiligo patients of different clinical types	
1	Superoxide dismutase activity in erythrocytes of controls and different clinical types of vitiligo	118
2	Erythrocyte lipid peroxidation levels in controls and	119

	different clinical types of vitiligo	
3	Glucose 6 phosphate dehydrogenase activity in erythrocytes of controls and different clinical types of vitiligo	120
4	Vitamin E levels in the plasma of controls and different clinical types of vitiligo	120
5	Catalase activity in erythrocytes of control and different clinical types of vitiligo	121
6	Glutathione peroxidase activity in erythrocytes of controls and different clinical types of vitiligo	121
7	Whole blood GSH levels of controls and different clinical types of vitiligo	122
8	Glutathione S transferase activity in the plasma of controls and different clinical types of vitiligo	123
9	Glutathione reductase activity in the plasma of controls and different clinical types of vitiligo	123
	Chapter IVA, Association of <i>catalase</i> T/C exon 9 polymorphism in relation to catalase activity and oxidative stress with vitiligo susceptibility in Gujarat population	
1	Restriction analysis of T/C polymorphism in the exon 9 of <i>CAT</i> gene	135
2	Erythrocyte catalase activity in controls and vitiligo patients	137
3	Erythrocyte catalase activity in C/C and C/T genotypes of vitiligo patients	137
4	Erythrocyte LPO levels in controls and vitiligo patients	138
	Chapter IVB, Association of <i>glutathione peroxidase</i> codon 200 polymorphism in relation to its activity and oxidative stress with vitiligo susceptibility in Gujarat population	
1	Restriction analysis of C/T polymorphism in the exon 2 of <i>GPX</i> gene	147
2	Erythrocyte glutathione peroxidase activity in controls and vitiligo patients.	149
3	Erythrocyte glutathione peroxidase activity in CC and CT genotypes of vitiligo patients	149
4	Erythrocyte LPO levels in controls and vitiligo patients	150
	Chapter V, Superoxide dismutase 1 protein content in relation to SOD activity in vitiligo patients compared to controls	
1	Superoxide dismutase 1 activity in erythrocytes of controls and vitiligo patients	156
2	Densitometric analysis of SOD 1 protein levels in vitiligo	156

	patients compared to controls	
3	Western blot analysis of erythrocyte SOD 1 protein levels in vitiligo patients and controls	156
	Chapter VIA, Evaluation of autoimmune hypothesis in Gujarat vitiligo patients	
1	Antimelanocyte antibody levels in vitiligo patients compared to controls.	165
2	Antimelanocyte antibody levels in different age groups of vitiligo	165
3	Antimelanocyte antibody levels in different clinical types of vitiligo	166
4	Antimelanocyte antibody levels in active and stable types of vitiligo	167
5	Antimelanocyte antibody levels based on the duration of vitiligo	167
6	Western blot analysis of antibodies to melanocyte membrane antigens in vitiligo patients compared to controls	168
	Chapter VIB, Evaluation of oxidative stress and autoimmune hypotheses at the onset of vitiligo	
1	Antimelanocyte antibody levels based on the duration of vitiligo	174
2	Erythrocyte lipid peroxidation levels based on the duration of vitiligo	175
	Chapter VII, Role of acetylcholine esterase in the pathogenesis of vitiligo	
1	Acetylcholine esterase activity in the in erythrocytes of control and vitiligo patients.	181
2	Acetylcholine esterase activity in the erythrocytes of controls and different clinical types of vitiligo	182
3	Acetylcholine esterase activity in the in erythrocytes of control and different age groups of vitiligo patients	182
4	Acetylcholine esterase activity in the erythrocytes of controls, segmental and non-segmental vitiligo	183
5	Acetylcholine esterase activity in the erythrocytes of controls, active and stable vitiligo.	184
6	Acetylcholine esterase activity in the erythrocytes of controls, patients with positive family history and patients with negative family history of vitiligo	184
