

LIST OF TABLES

Biochemical and Molecular Approaches for Developing Phosphate Solubilizing Plant Growth Promoting Rhizobacteria (PGPR)

Table No.	TITLE	Page No.
Chapter 1 Review of Literature and Introduction		
Table 1.1	Total P accumulation in cultures of different bacterial species grown on insoluble mineral phosphate substrate (mg/l)	8
Table 1.2	Phosphate mineralization from organic P substrates by some soil bacteria	10
Table 1.3	A brief summary of production of principal organic acids by phosphate solubilizing bacteria	14
Table 1.4	A brief summary of production of principal organic acids by phosphate solubilizing fungi and actinomycetes	15
Table 1.5	Cloning of genes involved in mineral phosphate solubilization (mps)	22
Chapter 2 Biochemical Characterization of Variation in the Nature of Organic Acid Secretion and Rock Phosphate Solubilization by Rhizobacteria, <i>Citrobacter</i> sp. DHRSS on Various Carbon Sources		
Table 2.1	Rock phosphate (RP) solubilization and organic acid production by <i>Citrobacter</i> sp. DHRSS on different C sources	38

Table No.	TITLE	Page No.
Chapter 3 Repression of Mineral Phosphate Solubilizing (mps) Phenotype in the Presence of Weak Organic Acids in Plant Growth Promoting Fluorescent <i>Pseudomonads</i>		
Table 3.1	Growth, acidification and rock phosphate solubilization by <i>P. aeruginosa</i> M3 and SP1 on 100 mM Tris Cl (pH 8.0) and 100 mM glucose containing RP minimal medium	48
Table 3.2	Growth and RP solubilization by <i>P. aeruginosa</i> M3 and SP1 in the presence of organic acids in liquid medium	55
Chapter 4 Screening of <i>Arabidopsis thaliana</i> cDNA Library for Mineral Phosphate Solubilizing (mps) Ability		
Table 4.1	Bacterial strains used for the study	66
Table 4.2	Carbon sources and concentrations of Tris Cl (pH 8.0) buffering selected for screening on <i>E. coli</i>	76
Table 4.3	Growth and acid secretion by <i>P. fluorescens</i> cDNA transformants on different C sources	85
