

List of tables

No.	TITLE	Page no
1	Selected examples of magnetic separation of DNA	10
2	Selection of few commercially available magnetic and super paramagnetic particles used (or suitable) for the isolation and purification of nucleic acids	13
3	Selected examples of magnetic separation of proteins	19
4	Selected examples of magnetic separation of low-molecular weight biologically active compounds and organic xenobiotics	21
5	Selected examples of antibody tagged magnetic particles for isolation and purification of different cell types	24
6	List of few commercially available magnetic and superparamagnetic particles used (or suitable) for the isolation of cells	26
7	Use of magnetoliposomes for application in an <i>in vitro</i> and <i>in vivo</i> studies	34
8	Yield of extracted DNA from blood and PBMCs	93
9	Yield of extracted DNA from buffy-coat and cultured cells	94
10	Yield of extracted DNA from brain and liver homogenate	97
11	Major differences between conventional, silica magnetic bead and present procedure	99
12	Comparison between present Magnetic method and Qiagen kit	105
13	Major differences in present method with conventional procedure for DNA extraction from gram-positive bacteria	109

14	Major differences in present method with conventional procedure for DNA extraction from gram-negative bacteria	111
15	Comparison of present method with conventional protocol for extraction of DNA from yeast	121
16	Comparison of present method with conventional procedure for isolation of DNA from <i>D. dictyostelium</i>	123
17	Modification required in the standard protocol to make the present method universal for DNA extraction	151
18	Percentage ALP bound and activity retained onto magnetic nanoparticles with two methods (3 1 1)	159
19	Effect of different sonication time on the % ALP bound and activity recovered (3 1 1)	160
20	Percentage ALP bound and activity retained onto magnetic nanoparticles with two methods (3 1 0 4 and 3 1 0 2)	161
21	Selected examples where enzymes have been covalently linked to solid matrices and comparison with present work	163
22	Comparative study of streptavidin binding to magnetic particles and its capacity to bind biotin	180
23	Biotin-binding capacity of magnetic streptavidin particles	182
24	DOX encapsulation efficiency in liposome/ML system	195
25	Stability of Liposome/ML encapsulated doxorubicin stored at 0-4°C	196
26	Tissue distribution of doxorubicin after intravenous administration	205
27	Tumor regression study in fibrosarcoma bearing BALBc mice	210
28	Characteristics of prepared magnetoliposomes	213
