

LIST OF FIGURES

Figures	Page No.
1. Figure 2.1: TNF- α signaling and its implication in pathophysiological conditions.	16
2. Figure 2.2: NF- κ B in pathophysiological conditions.	22
3. Figure 2.3: Regulation of TNF- α -induced NF- κ B pathway by ubiquitination.	24
4. Figure 2.4: Oscillations in NF- κ B activation and temporal gene expression induced by NF- κ B.	26
5. Figure 2.5: Mechanisms of Ubiquitination and outcomes.	30
6. Figure 2.6: Domain architecture of TRIM proteins.	37
7. Figure 2.7: Classification of TRIM proteins and their schematic representation.	39
8. Figure 2.8: TRIM proteins in regulation of TNF- α -Induced NF- κ B pathway.	43
9. Figure 3.1: Key questions.	48
10. Figure 5.1: TRIMs are feedback regulators of TNF- α -induced NF- κ B pathway.	69
11. Figure 6.1: MID2/TRIM1 is a 'late' response NF- κ B target gene.	73
12. Figure 6.2 (I): TNF- α inhibits turnover of MID2/TRIM1.	75
13. Figure 6.2 (II): TNF- α stabilizes MID2/TRIM1 temporally.	77
14. Figure 6.3: MID2/TRIM1 inhibits TNF- α -induced NF- κ B activation.	78
15. Figure 6.4: MID2/TRIM1 mediated E3 ligase activity regulates TNF- α -induced NF- κ B activity.	80
16. Figure 6.5 (I): MID2/TRIM1 acts at TRAF2 to regulate TNF- α -induced NF- κ B activity.	82
17. Figure 6.5 (II): MID2/TRIM1 expression is down regulated in several cancers.	83
18. Figure 6.5 (III) : MID2/TRIM1 is down regulated in several cancers and shows inverse correlation with TRAF2.	85
19. Figure 7.1 (I) : TRIM15 is a late response TNF- α induced gene and inhibits TNF- α -induced NF- κ B activation.	92
20. Figure 7.1 (II) : Temporal Expression of TRIM15 and effect on NF- κ B activation.	94
21. Figure 7.2 : TRIM15 acts upstream of p65 and downstream of TRAF2 in NF- κ B pathway.	96
22. Figure 7.3: TRIM15 possesses DUB-like activity and predominantly inhibits K6 and K63 linked polyubiquitination.	99
23. Figure 7.4: PRY/SPRY domain mediated DUB-like activity of TRIM15 is essential for inhibition of TNF- α -induced NF- κ B activity.	101

24. Figure 7.5 (I) : Cellular localization and dynamics of TRIM15.	103
25. Figure 7.5 (II) : TRIM15 forms higher order structures.	105
26. Figure 7.6 : TRIM15 interacts with TRIM8 and inhibits TRIM8-enhanced NF- κ B activation.	107
27. Figure 7.7 : TRIM15 interacts with TAK1 and inhibits its K63-linked ubiquitination.	109
28. Figure 8.1 (I): TRIM8 regulates autophagic flux.	117
29. Figure 8.1 (II): TRIM8 promotes p62/SQSTM1 expression.	119
30. Figure 8.2: RING domain of TRIM8 is required for autophagy.	121
31. Figure 8.3 (I): TRIM8 stabilizes during genotoxic stress and regulates autophagy.	123
32. Figure 8.3 (II): Genotoxic stress enhances expression of TRIM8.	125
33. Figure 8.4: TRIM8 promotes lysosomal biogenesis.	127
34. Figure 8.5: TRIM8 inhibits caspase-3 activity and protects from genotoxic stress induced cell death.	129
35. Figure 8.6: TRIM8 mediated autophagy is required for cell survival during genotoxic stress.	132
36. Figure 8.7: TRIM8 interacts with XIAP and caspase-3 and stabilizes XIAP.	135
37. Figure 9.1: Graphical abstract of the current study.	150
