

Table of Figures

Chapter No.	Title	Page No.
Fig 1.1	Mechanism of generating free radicals by metals through Fenton like reaction	2
Fig 1.2	Possible mechanism for heavy metal induced oxidative stress	3
Fig 1.3	Schematic accumulation pattern of cadmium	6
Fig 1.4	Effects of Cadmium on essential nutrients in body	7
Fig 1.5	Effect of Pb on heme biosynthesis pathway	9
Fig 1.6	Reaction of hydroxyl radical with sulfhydryl group of protein and subsequent generation of superoxide radical.	9
Fig 1.7	Effect of lead on antioxidant enzymes	10
Fig 1.8	Reduction and oxidative methylation of Arsenic	13
Fig 1.9	Intracellular metabolism of inorganic arsenic	15
Fig 1.10	Molecular components involved in the uptake and efflux of iAsIII and its methylated metabolites from liver to the blood and bile	16
Fig 1.11	Arsenic resistance mechanism in (a) <i>E. coli</i> (b) Biomethylation into volatile gas TMAs	17
Fig 1.12	Structures of various chelating agents used to treat heavy metal poisoning	20
Fig 1.13	Combination therapy involving chelation therapy and antioxidant treatment for heavy metal exposure	21
Fig 1.14	Chain breaking mechanism of antioxidants	22
Fig 1.15	Redox cycling for PQQ	22
Fig 1.16	Different functions of PQQ	23
Fig 1.17	Proposed pathway for PQQ action	23
Fig 1.18	Proposed mechanism for PQQ induced mitochondriogenesis	24
Fig 1.19	Effects of PQQ on cell signaling	26
Fig 1.20	Proposed mechanism for the PQQ mediated ligand-independent activation of EGFR signalling through redox cycling	26
Fig 1.21	A multilayered barrier system in gut	28
Fig 1.22	Effect of colonic mucus layer on the segregation of luminal bacteria from the intestinal mucosa during homeostasis, inflammation and resolution	29
Fig 1.23	Beneficial effects of Probiotics	29
Fig 1.24	Overview of applications of bioengineered probiotics	34
Fig 1.25	Several cellular function which affected by butyrate produced in colon	36
Fig 1.26	Beneficial effects of colonic SCFA production.	37
Fig 1.27	Biologic effects and mechanisms of action of prebiotics, probiotics, and synbiotics	39
Fig 1.28	Characteristics of Probiotics for reducing contaminant toxicity	41

Fig 1.29	Phenotypical characteristics of <i>E. coli</i> Nissle 1917 and its gene loci on the bacterial chromosome	46
Fig 1.30	Immune modulation by <i>E. coli</i> Nissle 1917	46
Chapter 2		
Fig 2.1	Proposed mechanism for the detoxification of Cd using <i>EcN-20</i> and <i>EcN-21</i>	53
Fig 2.2	Cloning strategy for construction of pRN1 and its confirmation by PCR.	58
Fig 2.3	Cloning strategy for construction of pRN2 and pRN3; the confirmation of pRN2 by restriction digestion with Sac1 and of pRN3 by PCR	59
Fig 2.4	Effect of genetically engineered probiotic <i>E. coli</i> Nissle 1917 in Liver on Cd exposure	60
Fig 2.5	Effect of genetically engineered probiotic <i>E. coli</i> Nissle 1917 in Kidney on Cd exposure	61
Fig 2.6	Effect of genetically engineered probiotic <i>E. coli</i> Nissle 1917 on levels of Cadmium (Cd) in faeces of rats.	63
Fig 2.7	Photomicrograph of Liver stained with HE	64
Fig 2.8	Photomicrograph of Kidney stained with HE	64
Chapter 3		
Fig.3.1	Proposed mechanism for the detoxification of Cd using <i>EcN-22</i> and <i>EcN-23</i>	69
Fig.3.2	Effect of genetically engineered probiotic <i>E. coli</i> Nissle 1917 on Cd exposure in Liver and Kidney	74
Fig.3.3	Photomicrograph of Liver stained with HE	75
Fig.3.4	Photomicrograph of Kidney stained with HE	75
Chapter 4		
Fig.4.1	Effect of genetically engineered probiotic <i>E. coli</i> Nissle 1917 against LPS induced damage in Pb treated rats on Colon and Liver	83
Fig 4.2	Effect of genetically engineered probiotic <i>E. coli</i> Nissle 1917 against LPS induced damage in Pb treated rats on Gastric emptying and Intestinal transit; Survival % of rats; mRNA expression levels of TNF- α , iNOS in colon and Metallothionein in liver.	84
Fig 4.3	Photomicrograph of intestinal tissue stained with HE	85
Chapter 5		
Fig 5.1	Effect of genetically engineered probiotic <i>E. coli</i> Nissle 1917 on Cd-Pb coexposure in Liver and Kidney	94
Fig 5.2	Effect of genetically engineered probiotic <i>E. coli</i> Nissle 1917 on Calcium, Zinc, Iron and Magnesium levels in serum.	95
Fig 5.3	Photomicrograph of Liver and Kidney stained with HE	97
Fig 6.1	Proposed mechanism for the detoxification of As using <i>EcN-20</i> and <i>EcN-24</i>	102
Fig 6.2	Cloning strategy for construction of pRN4 and its confirmation by PCR.	108
Fig 6.3	Cloning strategy for construction of pRN5 and its	109

	confirmation by PCR.	
Fig 6.4	Effect of genetically engineered probiotic <i>E. coli</i> Nissle 1917 on As exposure in liver	111
Fig 6.5	Effect of genetically engineered probiotic <i>E. coli</i> Nissle 1917 on As exposure in kidney	112
Fig 6.6	Effect of genetically engineered probiotic <i>E. coli</i> Nissle 1917 on mRNA expression levels of (A) Metallothionein (B) iNOS in liver on As exposure.	112
Fig 6.7	Photomicrograph of Liver stained with HE	114
Fig 6.8	Photomicrograph of Kidney stained with HE	115
