

TABLE OF CONTENTS

Chapter 1: Introduction

1.1.	Probiotics	1
1.2.	The genus <i>Lactobacillus</i>	1
1.2.1.	<i>Lactobacillus</i> as probiotics	2
1.2.2.	Existence of <i>Lactobacillus</i> in human gastrointestinal tract	2
1.2.3.	Effect of <i>Lactobacillus</i> on human health	3
1.2.4.	General Mechanisms of action of Lactobacilli	5
1.3.	Adhesion mechanisms of <i>Lactobacillus</i> in humans	7
1.4.	Other molecules mediated adhesion	8
1.4.1.	Peptidoglycan layer	8
1.4.2.	Teichoic acids	8
1.4.3.	Exopolysaccharides	10
1.4.4.	Pili and flagella	10
1.5.	Protein-mediated adhesion	10
1.5.1.	Covalently anchored surface proteins	11
1.5.1.1.	N- or C- terminally anchored proteins	11
1.5.1.2.	Lipoproteins	12
1.5.1.3.	LPxTG-anchored protein	12
1.5.2.	Non-covalently anchored surface proteins	13
1.5.2.1.	LysM domain	13
1.5.2.2.	Choline-binding domains	13
1.5.2.3.	Surface layer (S-layer) protein	14
1.6.	A review of well-known adhesins from bacteria	15
1.6.1.	Adhesins from Gram-negative bacteria	15
1.6.1.1.	Fimbrial adhesins/ Pili	15
1.6.1.2.	Non-fimbrial adhesins	17
1.6.2.	Adhesins from gram positive bacteria	18
1.6.2.1.	Gram-positive pilins	18
1.6.2.2.	Collagen binding adhesins	18
1.6.2.3.	Fibronectin binding adhesin	18
1.7.	Role of adhesins/lectins in <i>Lactobacillus</i> adhesion to host tissues and ECM	19
1.7.1.	Mucus binding proteins	19
1.7.2.	Adhesins binding the extracellular matrix	20
1.7.3.	Anchorless adhesins	20
1.8.	Rationale behind the current study	22
1.9.	Aims and objectives of the present study	23

Chapter 2: Bioinformatics analysis and annotation of *Lactobacillus acidophilus* surface proteins and secretome

2.1.	Introduction	24
------	--------------	----

2.1.1.	Secreted proteins	25
2.1.2.	Covalently anchored proteins	26
2.1.2.1.	N- or C- terminally anchored proteins	26
2.1.2.2.	Lipoproteins	26
2.1.2.3.	LPxTG anchored proteins	26
2.1.3.	Non-covalently anchored proteins	27
2.1.3.1.	LysM domain	27
2.1.3.2.	Choline-binding domain	27
2.1.3.3.	Peptidoglycan binding domain (PG binding domain)	27
2.1.3.4.	S-layer protein with SLH domain	27
2.1.3.5.	WxL domain	27
2.1.3.6.	SH3 domain	28
2.2.	Methodology	28
2.2.1.	Tools and software used for prediction	28
2.2.2.	Genome annotation	29
2.2.2.1.	Secreted/ Surface associated protein prediction	29
2.2.2.2.	Non-covalent cell-wall binding/anchored proteins	33
2.2.2.3.	Adherence proteins	33
2.3.	Results	33
2.3.1.	Secreted/ Surface associated protein prediction	33
2.3.2.	Non-covalent binding/ anchored proteins	42
2.3.3.	Adherence proteins:	43
2.4.	Discussion	46

Chapter 3: Cloning, expression, purification, biophysical and biochemical characterization of Glyceraldehyde 3-phosphate dehydrogenase (GAPDH) from *Lactobacillus acidophilus*

3.1.	Introduction	52
3.2.	Materials	53
3.2.1.	Chemicals and Reagents	53
3.2.2.	<i>Lactobacillus</i> strain and genomic DNA isolation	54
3.2.3.	Cloning vectors and bacterial strain	54
3.3.	Methods	54
3.3.1.	Genomic DNA isolation and strain confirmation	54
3.3.1.1.	Genomic DNA isolation:	54
3.3.1.2.	Strain confirmation	55
3.3.2.	Cloning and expression of recombinant LaGAPDH (r-LaGAPDH)	56
3.3.2.1.	PCR amplification	56
3.3.2.2.	Restriction digestion and ligation reaction	56
3.3.2.3.	Chemical competent cells preparation and clone transformation into <i>E.coli</i>	57
3.3.2.4.	Heterologous expression of r-LaGAPDH	58

3.3.2.5. Purification of r-LaGAPDH using affinity chromatography	59
3.3.3. Biochemical characterization of r-LaGAPDH	59
3.3.3.1. Hemagglutination and carbohydrate specificity	59
3.3.3.2. Effect of temperature	60
3.3.3.3. Mucin binding assay	60
3.3.3.4. Enzyme kinetic studies of r-LaGAPDH	60
3.3.4. Biophysical characterization	61
3.3.4.1. Peptide mass fingerprinting (MALDI MS/MS)	61
3.3.4.2. Circular dichroism spectroscopy	61
3.3.4.3. Molecular mass identification of r-LaGAPDH	61
3.3.4.4. Fluorescence spectroscopy	61
3.4. Results	63
3.4.1. Genomic DNA isolation and strain identification	63
3.4.2. Cloning, expression and purification of r-LaGAPDH from <i>L. acidophilus</i>	63
3.4.2.1. PCR amplification and clone confirmation	63
3.4.2.2. Heterologous expression and purification	66
3.4.3. Biochemical and functional characterization of LaGAPDH	68
3.4.3.1. Hemagglutination assay and carbohydrate specificity	68
3.4.3.2. Mucin-binding assay	68
3.4.3.3. Enzyme kinetic studies	70
3.4.4. Biophysical studies	71
3.4.4.1. Molecular mass:	71
3.4.4.2. CD spectroscopy analysis	71
3.4.4.3. Fluorescence spectroscopy	72
3.5. Discussion	75

Chapter 4: Crystallization and structure solution of Glyceraldehyde 3-phosphate dehydrogenase (GAPDH) from *Lactobacillus acidophilus*

4.1. Introduction	79
4.1.1. Macromolecular crystallography and its history	79
4.1.2. Protein Crystallization	80
4.1.3. X-ray diffraction and source of X-ray	81
4.1.4. Data collection strategies and data processing	82
4.1.5. X-ray data quality indicators	83
4.1.6. Structure solution	83
4.1.6.1. Phase determination	83
4.1.6.2. Improvement and modification of electron density	85
4.1.7. Structure refinement	85
4.1.7.1. Maximum likelihood and simulated annealing method	87
4.1.8. Electron density maps and model building	87
4.2. Materials	88

4.3.	Methods	89
4.3.1.	Siliconization	89
4.3.2.	Crystallization setup	89
4.3.3.	Data collection	89
4.3.4.	Data processing	90
4.3.5.	Structure determination.	90
4.3.6.	Structure refinement	91
4.3.7.	Co-crystallization studies	91
4.3.8.	Bioinformatics analysis	92
4.4.	Results and discussion	93
4.4.1.	Crystallization and structure solution	93
4.4.1.1.	Crystallization	93
4.4.1.2.	Data Collection	93
4.4.1.3.	Data processing	96
4.4.1.4.	Structure solution, model building and refinement	100
4.4.2.	Crystallization, data processing and refinement of r-LaGAPDH complex	101
4.4.2.1.	Crystallization of r-LaGAPDH complex	101
4.4.2.2.	Data collection and processing	106
4.4.3.	Crystal structure of r-LaGAPDH	107
4.4.3.1.	Quality of r-LaGAPDH model	107
4.4.3.2.	Structural features	107
4.4.3.3.	Sequence and structural comparison with other GAPDHs.	108
4.5.	Discussion	112

Chapter 5: Bioinformatics analysis, cloning, expression, purification and characterization of Mucus binding protein (MubP) and Fibronectin binding protein (FBP) from *Lactobacillus acidophilus*

5.1.	Introduction	117
5.2.	Materials	118
5.2.1.	Chemicals and Reagents	118
5.2.2.	<i>Lactobacillus</i> strain and genomic DNA isolation.	119
5.2.3.	Cloning vectors and bacterial strains	119
5.3.	Methods	120
5.3.1.	Gene amplification and cloning	120
5.3.1.1.	PCR amplification and cloning of LaMubP and LaMubPtr.	120
5.3.1.2.	PCR amplification and cloning of LaFBP and LaFBPtr.	121
5.3.2.	Heterologous protein expression in <i>E. coli</i> strains.	121
5.3.2.1.	Expression of r-LaMubP and r-LaMubPtr in <i>E. coli</i> strains.	121
5.3.2.2.	Expression of r-LaFBP and r-LaFBPtr in <i>E. coli</i> strains.	122
5.3.3.	Purification of recombinant proteins using affinity chromatography	122

5.3.3.1.	r-LaMubP and r-LaMubPtr purification using Ni-NTA affinity chromatography	122
5.3.3.2.	r-LaFBP and r-LaFBPtr purification using Ni-NTA affinity chromatography	122
5.3.4.	Biophysical characterization	123
5.3.4.1.	Peptide mass fingerprinting (MALDI MS/MS) of r-LaMubP and r-LaFBP	123
5.3.4.2.	Circular dichroism spectroscopy of recombinant r-LaMubP	123
5.3.5.	Bioinformatics analysis	123
5.3.5.1.	Sequence homology search and phylogeny	123
5.3.5.2.	Homology modelling and structure validation	123
5.4.	Results	124
5.4.1.	Gene amplification and cloning	124
5.4.1.1.	LaMubP amplification and cloning in pET15b	124
5.4.1.2.	LaMubPtr amplification and cloning in pET30a	125
5.4.1.3.	LaFBP amplification and cloning in pET15b and pET28a	127
5.4.1.4.	LaFBPtr amplification and cloning in pET15b and pET28a	128
5.4.2.	Expression and purification of recombinant proteins in E. coli strains	128
5.4.2.1.	Expression and purification of r-LaMubP	128
5.4.2.2.	Expression and purification of r-LaMubPtr	129
5.4.2.3.	Expression and purification of r-LaFBP	133
5.4.2.4.	Expression and purification of r-LaFBPtr	133
5.4.3.	Biophysical characterization	134
5.4.3.1.	Peptide mass fingerprinting (MALDI MS/MS) of r-LaMubP and r-LaFBPtr	134
5.4.3.2.	CD spectroscopy analysis of r-LaMubP	135
5.4.4.	Bioinformatics analysis	136
5.4.4.1.	Mucus binding protein (LaMubP)	136
5.4.4.2.	Fibronectin binding protein (LaFBP)	138
5.5.	Discussion	141
	<u>Chapter 6: Summary and conclusion</u>	146
	<u>References</u>	152
	<u>List of publications</u>
