LIST OF FIGURES	ii
ABBREVIATIONS	vii

CHAPTER 1: INTRODUCTION

1.1. Dyes.....	2
1.1.1. Classification of dyes.....	2
1.2. Environmental impact of synthetic dyes.....	6
1.3. Scope of treatment by different dye removal techniques.....	7
1.3.1. Physical methods.....	8
1.3.2. Chemical methods.....	8
1.3.3. Biological methods.....	9
1.4. Physiology of fungi and its classification.....	10
1.5. Wood degrading fungi.....	11
1.5.1. Brown rot.....	13
1.5.2. Soft rot.....	14
1.5.3. White rot.....	15
1.6. Lignin.....	16
1.6.1. Composition and Distribution of lignin within cell wall of vascular plants.....	16
1.6.2. Lignin structure.....	16
1.7. Lignin degradation.....	19
1.8. Action mechanism of lignin degradation by white rot fungi.....	20
1.9. Ligninolytic enzymes of white rot fungi.....	21
1.10. Application of ligninolytic enzymes of white rot fungi in different industrial sectors.....	30
1.11. White rot fungi as a potential tool in biodegradation approach.....	31

CHAPTER 2: MATERIALS AND METHODS

I. ENZYME AND BIODEGRADATION STUDY

2.1. Chemicals.....	33
2.2. Collection and isolation of fungi.....	34
2.3. Optimization of growth media.....	34
2.4. Screening of white rot fungi	35

2.5. Molecular identification of <i>Trametes hirsuta</i> and <i>Trametes versicolor</i>	35
2.6. Determination of enzyme activity	36
2.6.1. Production of ligninolytic enzymes by Solid State Fermentation (SSF).....	36
2.6.2. Optimization assays under SSF.....	37
2.6.3. Harvesting and enzyme assay.....	38
2.6.4. Effect of physicochemical parameters.....	39
2.7. Partial purification of crude extract.....	40
2.7.1. Ammonium sulphate precipitation and Dialysis.....	40
2.7.2. Molecular weight determination.....	41
2.8. Decolourization and degradation experiments.....	43
2.8.1. Dye preparation and liquid decolourization assay.....	43
2.8.2. Harvesting and analytical assay.....	43
2.8.3. FTIR (Fourier Transform Infrared Spectroscopy) Analysis.....	44

II. HISTOLOGICAL STUDY

2.9. Wood blocks/material and <i>invitro</i> laboratory decay test.....	44
2.9.1. Sample processing for light microscopy studies.....	45
2.9.2. Confocal Laser Scanning Microscopy (CLSM).....	45

CHAPTER 3: RESULTS AND DISCUSSION

I. ENZYME AND BIODEGRADATION STUDY

3.1. Isolation and purification of Fungi.....	47
3.1.1. Screening of white rot fungi for ligninolytic enzyme study and dye degradation.....	47
3.2. Determination of enzyme activity	48
3.2.1. Solid State Fermentation (SSF).....	48
3.2.2. Optimization assays under SSF.....	50
3.2.3. Production of ligninolytic enzymes by <i>Trametes hirsuta</i> and <i>Trametes versicolor</i>	54
3.2.4. Effect of physicochemical parameters	56
3.3. Partial purification of crude extracts.....	60
3.3.1. Ammonium sulphate precipitation.....	60
3.3.2. Molecular weight determination.....	60
3.4. Decolourization and degradation experiments.....	61
3.4.1 Dye decolourization in liquid medium by <i>Trametes hirsuta</i> and <i>Trametes versicolor</i>	61
3.4.2. FTIR (Fourier Transform Infrared Spectroscopy) Analysis.....	79

II. HISTOLOGICAL STUDY

3.5. Structure of secondary xylem	90
3.6. <i>Invitro</i> decay test.....	90
3.7. General mechanism of hyphal invasion.....	91
3.8. Decay pattern of <i>Trametes hirsuta</i> and <i>Trametes versicolor</i> in the cell wall of wood species.....	91
