

## List of tables

Table 2.1 Geographical Positions of Selected Sites

Table 2.2 List of documented species (Family - Poaceae)

Table 2.3 List of associated herbaceous legumes (Family - Leguminosae)

Table 2.4 List of Rare Grasses and Legumes

Table 2.5 List of other associated species

Table 2.6 Family-wise contribution to genera and species

Table 2.7 Ratio of species, genus and family

Table 2.8 Quantitative characters of Grasses and Legumes

Table 2.9 Top six species of studied grasslands

Table 2.10 Comparison of different indices

Table 3.1 Phenological development of species at Bandheli grassland

Table 3.1 Phenological development of species at Bandheli grassland

Table 3.3 Community output for grasses

Table 3.4 Community output for legumes

Table 4.1 Parameters of the sieve stand and seed thresher

Table 4.2 Physical characteristic of selected grass species

Table 4.3 Efficiency parameters of the thresher

Table 4.4 Frequency distribution of cleaning efficiency through different ranges of  $D_g$

Table 5.1 Purity Analysis Data for Selected Grasses

Table: 5.2 Density, weight, size and vigor of grass and legume seeds

Table 5.3 Maturity index determination data

Table 5.4 Germination response of selected grass and legume species

Table 5.5 X-ray analysis and germination performance of selected forage grasses.

Table 5.6 X-ray analysis and germination performance of few wild legumes.

Table 6.1 Checklist of palatable grasses

Table 6.2 Nutritive and palatability values

Table 6.1 Geographical details of the selected study sites

Table 7.3 Distribution of different species at Bandheli grassland

Table 7.4 Distribution of different species at different sub sites of Rampur

Table 7.5 Distribution of different species at different sub sites of Rozam

Table 7.6 Distribution of different species at different sub sites of Kalitalai

Table 7.7 Instability of species towards fluctuating environment
