List of Tables

Table 3.1 Calculated value of Adsorption energy (E_{ad}), LUMO energy (E_{LUMO}), Fermi level (E_F), HOMO energy (E_{HOMO}), HOMO-LUMO gap (E_G), relative change in E_F (ΔE_{FR}), relative change in E_G (ΔE_{GR}) and adsorption distance(d) of Adenine, Cytosine, Guanine, Thymine, and Uracil adsorbed over C_{24} fullerene, respectively ……. (50)

Table 3.2 The NBO second-order perturbation energy (E^2) measured in kcal/mol) signifies the extent of charge transfer occurring between C_{24} fullerene and each of the nucleobases: Adenine, Cytosine, Guanine, Thymine, and Uracil ……..... (52)

Table 3.3 The computed variations in E_G (ΔE_G), recovery time (τ), and sensing response (S) for Adenine, Cytosine, Guanine, Thymine, and Uracil when they are adsorbed onto C_{24} fullerene, respectively …… (59)

Table 3.4 Calculated value of Adsorption energy (E_{ad}), LUMO energy (E_{LUMO}), HOMO energy (E_{HOMO}), HOMO-LUMO gap (E_G), Recovery Time (τ) and Sensing Response (S) for Adenine, Cytosine, Guanine, Thymine and Uracil adsorbed C_{24} fullerene with solvent effect, respectively……..... (61)

Table 3.5 Dipole moments of Adenine, Cytosine, Guanine, Thymine, and Uracil when adsorbed onto C_{24} fullerene, both in the absence (μ_{gas}) and presence (μ_{water}) of solvent effect…… (62)

Table 4.6 Calculated value of Adsorption energy (E_{ad}), LUMO energy (E_{LUMO}), Fermi level (E_F), HOMO energy (E_{HOMO}), HOMO-LUMO gap (E_G), relative change in E_F (ΔE_{FR}), relative change in E_G (ΔE_{GR}) and adsorption distance(d) of AMP, KET and MER adsorbed over C_{24} fullerene, respectively……..... (73)

Table 4.7 The NBO second-order perturbation energy (E^2, kcal/mol) corresponds to the charge transfer between the C_{24} fullerene and AMP, KET, and MER, respectively…… (74)

Table 4.8 Computed variations in E_G (ΔE_G), recovery time (τ), and sensing response (S) for Adenine, Cytosine, Guanine, Thymine, and Uracil when they are adsorbed onto C_{24} fullerene, respectively…… (79)

Table 4.9: Calculated value of Adsorption energy (E_{ad}), LUMO energy (E_{LUMO}), HOMO energy (E_{HOMO}), HOMO-LUMO gap (E_G), Recovery Time (τ) and Sensing Response (S) for AMP, KET, and MER adsorbed C_{24} fullerene with solvent effect, respectively…… (81)

Table 4.10 Comparison of the sensing property of C_{24} fullerene with other pristine nano-materials……. (82)

Table 4.6 Detail of the simulation boxes which used in this work…….. (83)

Table 5.11 Calculated Values of HOMO-LUMO gap (E_G), cohesive energy (E_B), and Bond length of C_{24}, C_{36},C_{50} and C_{70} fullerene…….... (95)

Table 5.2 Calculated value of Adsorption energy (E_{ad}), LUMO energy (E_{LUMO}), Fermi level (E_F), HOMO energy (E_{HOMO}), HOMO-LUMO gap (E_G), relative change in E_F (ΔE_{FR}), relative change in E_G (ΔE_{GR}) and adsorption distance(d) of LEU adsorbed over C_{24}, C_{36}, C_{50} and C_{70} fullerene, respectively…….. (100)

Table 5.3 The NBO second-order perturbation energy (E^2, kcal/mol) corresponds to the charge transfer between the LEU and C_{24}, C_{36}, C_{50} and C_{70} fullerene, respectively……..... (101)

Table 5.4 Calculated difference in E_G (ΔE_G), Recovery Time (τ) and Sensing Response(S) for LEU over C_{24}, C_{36}, C_{50} and C_{70} fullerene, respectively(T=310K) ……... (107)

Table 5.5 Global indices parameter of systems……. (109)

Table 5.6 Calculated value of Adsorption energy (Ead), LUMO energy (ELUMO), HOMO energy (EHOMO), HOMO-LUMO gap (EG), Recovery Time (τ) and Sensing Response (S) for LEU adsorbed C_{24}, C_{36}, C_{50} and C_{70} fullerene with solvent effect, respectively…... (110)

Table 5.7 Detail of the simulation boxes which used in this work…… (111)
