

Contents

I	Background	5
1	General Introduction and Historical Background	1
1.1	Celestial Mechanics	2
1.2	Artificial Satellites	3
1.2.1	Importance of Artificial Satellites	4
1.2.2	Types of Artificial Satellites	5
1.2.3	Forces Acting on Artificial Satellites	7
1.3	Control Theory	9
1.3.1	Key Concepts in Control Theory	10
1.3.2	Applications of Control Theory	11
1.3.3	Challenges and Future Directions	12
1.4	Motivation for Present Work	12
1.4.1	Importance of Controllability in Satellite Motion	13
1.4.2	Challenges in Satellite Motion Control	14
1.4.3	Research Directions and Future Perspectives	15
1.5	Layout of the Thesis	16
2	Mathematical Preliminaries of Orbital Mechanics	18
2.1	Introduction	19

2.2	Mathematical Formulation of Two-Body Problem	20
2.3	Perturbing Forces Acting on Artificial Satellites	22
2.3.1	Gravitational Force	22
2.3.2	Atmospheric Drag	23
2.3.3	Solar Radiation Pressure	23
2.3.4	Magnetic Forces	23
2.3.5	Other Forces	24
2.4	Mathematical Formulation of Motion under Perturbing Forces	24
2.5	Orbital Elements	28
2.6	Conclusion	31
3	Mathematical Control Theory	32
3.1	Control Theory	33
3.2	Some Results from Analysis	44
II	Research Work	48
4	Controllability Analysis of Satellite Motion	49
4.1	Introduction	50
4.2	Preliminaries	52
4.2.1	Linear Control Systems	52
4.2.2	Linearization of Differential Systems	53
4.3	Controllability Analysis of the Motion of Satellite	54
4.3.1	Adding the thruster $u_1(t)$ only in r direction	56
4.3.2	Adding the thruster $u_1(t)$ only in θ direction	59
4.3.3	Adding the thruster $u_1(t)$ only in z direction	61

4.3.4	Adding thrusters $u_1(t)$ and $u_2(t)$ in r and θ direction	63
4.3.5	Adding thrusters $u_1(t)$ and $u_2(t)$ in r and z direction	65
4.3.6	Adding thrusters $u_1(t)$ and $u_2(t)$ in θ and z direction	68
4.3.7	If we add the thrusters, in all the three directions i.e. r , θ and z directions	71
4.4	Conclusion	75
5	Trajectory Controllability of Artificial Satellite	77
5.1	Introduction	78
5.2	Preliminaries	79
5.3	Motion of Artificial Satellite	81
5.4	Generalization of the Problem	83
5.5	Simulation of the Problem	85
5.6	Conclusion	86
	Publications	87
	Presentations	87
	Future Scope	88
	Bibliography	90
