

INDEX

Chapter Number	Chapter Name	Page Number
1	Introduction and Review of Literature	1
	1.1 Breast cancer: Rising global health burden	1
	1.2 Breast cancer subtypes	1
	1.3 Tumor microenvironment (TME) in breast cancer	3
	1.3.1 Diversity of cells in TME and their role in Breast Cancer	3
	1.3.2 Cytokines and chemokines in TME of breast cancer	4
	1.4 TNF- α : Signaling and implication in breast cancer	5
	1.4.1 TNF- α : Critical cytokine for tumor progression	6
	1.4.2 TNF- α induced NF- κ B signalling	7
	1.4.3 TNF- α and NF- κ B; Implication in breast cancer	8
	1.5 TNF- α and Autotaxin (ATX): Role in breast cancer	11
	1.5.1 ATX in cancer	12
	1.5.2 ATX: Role in breast cancer	13
	1.6 TNF- α induced metabolic adaptation: Implication in breast cancer	14
	1.6.1 Reprogramming of metabolism: Implication in cancer progression	15
	1.6.2 Metabolism in breast cancer	17
	1.6.3 Mitochondria: Center of metabolic rewiring in cancer	18
	1.6.4 Mitochondrial OXPHOS: Implication in breast cancer	19
	1.6.5 Mitochondrial ROS: Driving breast tumorigenesis	20
	1.6.6 Mitochondria and metabolites in cancer	21
	1.6.7 TNF- α : Critical cytokine in metabolism	22
	1.7 Anti-TNF therapies in cancer	24
	1.8 Therapies targeting metabolism in cancer	25
2	Aims and Objectives	28
	2.1 Rational of Hypothesis	29
	2.2 Objectives	30
	2.3 Hypothesis	30

3	Materials and Method	31
	3.1 Cells and cell culture	32
	3.2 Mouse breast cancer model	32
	3.3 Animals	32
	3.4 Breast cancer patient samples	32
	3.5 Tumor cells injection in mice	33
	3.6 Infliximab treatment in mice model	33
	3.7 Kits and Reagents	33
	3.8 Antibodies	33
	3.9 CRISPR Cas9 knockout constructs	34
	3.10 Mitochondria isolation	34
	3.11 Sample preparation and digestion	34
	3.12 Mass spectrometry analysis	35
	3.13 Database search for proteomics data	35
	3.14 Relative protein quantification and bioinformatics analysis	36
	3.15 BN-PAGE	36
	3.16 Spectrophotometric analysis of mitochondrial Complex I and Complex II assays	37
	3.17 ATP Assay	37
	3.18 Assay of Intracellular and mitochondrial ROS	37
	3.19 MTT assay	38
	3.20 Scratch assay	38
	3.21 Cancer cell invasion assay	39
	3.22 Colony forming assay	39
	3.23 Migration assay	39
	3.24 3D culture	39
	3.25 Boyden chamber assay	39
	3.26 Immunohistochemistry	40
	3.27 Lung nodules measurement	40
	3.28 Realtime PCR	40
	3.29 ATX assay	41
	3.30 Cytokine/chemokine measurements	42

	3.31 Databases	42
	3.32 Statistics	43
4	Results and discussion	44
	4.1 Study the role of TNF-α -regulated mitochondrial proteins in ER/PR (+ve) and ER/PR (-ve) breast cancer cells.	44
	4.1.1 Proteomic analysis of mitochondrial proteins in ER/PR +ve and -ve breast cancer cells in presence and absence of TNF- α	45
	4.1.2 Analysis of TNF- α induced differential expression of mitochondrial proteins involved in assembly and functions of mitochondrial complexes	46
	4.1.3 Discussion	49
	4.2 Study the role of TNF-α-regulated mitochondrial functions and metabolism in ER (+ve) and ER (-ve) breast cancer cells and determining their migration and clonogenic ability.	51
	4.2.1 TNF- α differentially regulates mitochondrial supercomplex assembly and activity in ER/PR +ve (MCF-7) and ER/PR -ve (MDA-MB-231) breast cancer cells	52
	4.2.2 TNF- α downregulates ATP levels and enhances ROS generation in triple-negative MDA-MB-231 cells	54
	4.2.3 Targeted metabolomics analysis showed TNF- α differentially regulate metabolic pathways in ER/PR +ve and ER/PR-ve breast cancer cells	56
	4.2.4 TNF- α modulated mitochondrial functions differentially regulate migration and clonogenic ability of breast cancer cells	58
	4.2.5 Subunit of mitochondrial complexes negatively correlates with survival of the breast cancer patients	59
	4.2.6 Discussion	61
	4.3 Study the role of TNF-α -regulated NF-κB in regulating LYRM7 in breast cancer	65
	4.3.1 NF- κ B subunits are differentially expressed in breast cancer patient and are prognostic to the survival outcome	66
	4.3.2 TNF- α and canonical pathway subunits are positively correlated in breast cancer patients and determine breast cancer cell survival	70
	4.3.3 NF- κ B regulates LYRM7 expression in breast cancer cells	72
	4.3.4 LYRM7 expression regulates mitochondrial activities and complex assembly	75
	4.3.5 LYRM7 expression regulates the migration, invasion and clone forming ability of metastatic breast cancer cells under inflammatory condition	78
	4.3.6 LYRM7 expression decreases in Infliximab-treated mice	79
	4.3.7 LYRM7 expression decreases in metastatic breast cancer patients	80
	4.3.8 Discussion	82
	4.4 Study the role of TNF-α -regulated NF-κB in regulating Autotaxin (ATX) in breast cancer	86

	4.4.1 Infliximab mediated inhibition of TNF- α signaling inhibit breast cancer metastasis to lungs	87
	4.4.2 Infliximab alters the concentrations of cytokines in the plasma and breast tumors of syngeneic mice model	89
	4.4.3 Infliximab treatment decreases NF- κ B activation in breast tumors of syngeneic mice model	90
	4.4.4 TNF- α , RELA and ATX are positively correlated in breast cancer patients	91
	4.4.5 TNF- α induced NF- κ B and ATX activity are correlated in breast cancer	93
	4.4.6 Discussion	95
5	Summary and Conclusion	100
	5.1 Summary	101
	5.1.1 TNF- α mediated differential regulation of mitochondrial proteins in ER/PR +ve and ER/PR -ve breast cancer cell lines	101
	5.1.2 TNF- α differentially alters metabolic pathways in ER/PR +ve and ER/PR-ve breast cancer cells	102
	5.1.3 TNF- α induced NF- κ B regulates mitochondrial protein LYRM7	103
	5.1.4 Role of TNF- α in regulating Autotaxin in breast cancer	105
	5.2 Conclusion	105
	5.3 Limitations of the study	107
	5.4. Future perspective	108
6	Bibliography	109
7	List of publication	131
	A. Publications from Ph.D. thesis work	132
	B. Poster presentation in national and international conferences	132
	C. Publications from other associated work	133
8.	Reprints of published articles	135

Figure No.	Figure details	Page No.
Figure 1	Cellular and acellular components of breast cancer TME	3
Figure 2	Regulation of TNF- α -induced NF- κ B pathway and its role in cancer	9
Figure 3	ATX signaling in cancer	12
Figure 4	Mitochondria and its role in breast cancer	19
Figure 5	Schematic representation of hypothesis of the study	29
Figure 6	Quantitative proteomic analysis of TNF- α regulated mitochondrial proteins in breast cancer cells	46
Figure 7	TNF- α regulated mitochondrial proteins in breast cancer cells	48
Figure 8	TNF- α alters the OXPHOS assembly and activity in breast cancer cells	53
Figure 9	TNF- α decreases ATP levels and increases ROS generation in MDA-MB-231 cells	55
Figure 10	Metabolites levels in presence of TNF- α	57
Figure 11	TNF- α sensitizes cell death and decreases growth in MDA-MB-231 cells	59
Figure 12	Subunit of complex negatively correlates with survival of the breast cancer patients	60
Figure 13	Expression of NF- κ B subunits in breast cancer patients	67
Figure 14	Differential expression of NF- κ B subunits in subtypes of breast cancer patients using BCGENEX Miner Database	69
Figure 15	Correlation between TNF- α and canonical pathway subunits in breast cancer patients and breast cancer cell survival	71
Figure 16	NF- κ B increases LYRM7 expression in breast cancer cells	73
Figure 17	Inhibition of NF- κ B by curcumin in breast cancer cell	75
Figure 18	LYRM7 sgRNA validation in MDA-MB-231 cells	75
Figure 19	LYRM7 expression regulates mitochondrial activities and complex assembly under inflammatory condition	76
Figure 20	Supercomplex assembly and in-gel activity Complex I and complex III enzyme activity in LYRM7 sgRNA transfected MCF-7 cells in presence and absence of TNF- α	77

Figure 21	LYRM7 expression increases the migration, invasion and clone forming ability of metastatic breast cancer cells	79
Figure 22	LYRM7 expression decreases in Infliximab injected mice	80
Figure 23	Expression of LYRM7 in breast cancer patients and their survival ability	81
Figure 24	Infliximab decreases breast cancer metastasis to lungs	88
Figure 25	Cytokine profile in BALB/c mice treated with Infliximab	89
Figure 26	Infliximab inhibits NF- κ B activation in breast tumors	91
Figure 27	Positive correlations among TNF- α , RELA and ATX in breast cancer	92
Figure 28	ATX and TNF- α -induced NF- κ B activity are correlated in breast cancer and effects clone forming ability	95
Figure 29	Role of TNF- α in differentially modulating mitochondrial proteins	102
Figure 30	TNF- α modulates the mitochondrial functions and metabolite levels in breast cancer cells	103
Figure 31	TNF- α induced NF- κ B regulates LYRM7 expression in breast cancer	104
Figure 32	Infliximab decreases TNF- α induced NF- κ B activation and autotaxin expression that regulates breast cancer metastasis	105

List of Table

Table No. 1	NF- κ B subunits and their role in breast cancer	11
Table No. 2	Primer sequence	41
