

Table of Contents

Sr. No.	Title	Page No.
-	Abstract.....	I - III
-	List of Abbreviations.....	IV - V
Chapter 1: Introduction.....		1 - 48
1.1.	Water	2
1.2.	Water pollution.....	3
1.3.	Sources of water pollution	4
1.4.	Types of water pollutants	6
1.4.1.	Inorganic pollutants.....	7
1.4.1.1.	Heavy metal ion sources and human impact	7
1.4.2.	Organic pollutants	9
1.4.2.1.	Dyes sources and toxicology effect	10
1.5.	Strategies to remove of organic and inorganic pollutants.....	13
1.5.1.	Physio-chemical process	14
1.5.1.1.	Adsorption process	15
1.5.1.2.	Ion-Exchange Process.....	18
1.6.	Theoretical aspects on sorption.....	21
1.7.	Adsorbents for removing of organic and inorganic pollutants.....	21
1.7.1.	Ion exchange resin as sorbent.....	22
1.7.2.	Tetravalent metal acid salt as sorbent.....	29
1.7.2.1.	Salient aspects of Tetravalent metal acid (TMA) salts	29
1.7.2.2.	Structural aspects of TMA salts	30
1.7.2.3.	Metal phosphonates as novel hybrid materials.....	33
1.8.	Aim and scope of the present work.....	37
1.9.	Key objectives of the work	38
1.10.	Constitution of the thesis	38
1.11.	References.....	39
Chapter 2: Materials, Methods and Characterizations.....		49 - 71
2.1.	Materials.....	50
2.2.	Methods.....	52

2.2.1. Modification of Amberlite IRA-400(Cl ⁻) resin.....	52
2.2.2. Synthesis of metal (IV) phosphonates.....	52
2.2.2.1. Sol-gel Method	52
2.2.2.2. Synthesis of Ce-ATMP adsorbent.....	58
2.2.2.3. Synthesis of Sn-ATMP adsorbent.....	60
2.3. Characterization	62
2.3.1. Physical and Ion exchange characteristics	62
2.3.1.1. Appearance	62
2.3.1.2. Percentage moisture content.....	63
2.3.1.2. Size of particle	63
2.3.1.3. Apparent/Bulk density (D _{col})	63
2.3.1.4. True density (D _{ie}).....	64
2.3.1.5. Void volume fraction	64
2.3.1.6. Nature of exchanger (pH titration curve)	65
2.3.1.7. Chemical stability	65
2.3.1.8. Ion exchange capacity (IEC)	65
2.3.1.9. Effect of calcination on IEC	67
2.4. Characterization by instrumental techniques	67
2.4.1. Elemental analysis.....	67
2.4.1.1. Inductively coupled plasma atomic emission spectroscopy [ICP-AES]	68
2.4.1.2. CHN analyzer	68
2.4.2. Fourier transform infrared spectroscopy (FTIR).....	68
2.4.3. X-ray diffraction (XRD).....	69
2.4.4. Thermogravimetric analysis (TGA).....	69
2.4.5. Field emission scanning electron microscopy (FESEM) and energy-dispersive X-ray spectroscopy (EDX)	69
2.4.6. Ultraviolet-visible spectroscopy (UV-vis).....	70
2.4.7. pH Meter and Temperature-Controlled Shaker bath	70
2.5. References.....	70

Chapter 3: Removal of Transition and Heavy Metal Ions by Using Modified Chelating Resin (MCR) as an Adsorbent.....72 - 102

3.1. Introduction.....	73
3.2. Experimental Section.....	74

3.2.1. Distribution study	74
3.2.2. Adsorption studies	75
3.2.2.1. Effect of pH, contact time and temperature on adsorption/ion exchange.....	75
3.2.3. Thermodynamic studies	75
3.2.3.1. Equilibrium time determination.....	75
3.2.3.2. Equilibrium experiments	75
3.2.4. Sorption kinetics.....	76
3.2.4.1. Pseudo-first-order kinetic model	76
3.2.4.2. Pseudo-second-order kinetic model.....	76
3.2.4.3. Weber-Morris intraparticle diffusion model	76
3.2.5. Elution studies	77
3.3. Result and discussion.....	77
3.3.1. SEM-EDX.....	78
3.3.2. FTIR	80
3.3.3. Distribution studies	81
3.3.3.1. Distribution coefficient (K_d) of metal ion.....	81
3.3.4. Adsorption studies.....	83
3.3.4.1. Effect of pH and contact time on the adsorption of metal ions	83
3.3.5. Adsorption isotherms	85
3.3.6. Thermodynamic study of metal ion exchange process	89
3.3.7. Adsorption kinetics.....	91
3.3.8. Effect of nature eluant.....	93
3.4. Conclusions.....	100
3.5. References.....	101

Chapter 4: Adsorption of Acid Yellow 49 and Reactive Orange 12 by using Amberlite IRA-400(Cl⁻) Resin.....103 - 127

4.1. Introduction.....	104
4.2. Experimental section.....	105
4.2.1. Materials and characterization techniques	105
4.2.2. Adsorbent and adsorbate preparation and calibration	106
4.2.3. Adsorption study	106
4.2.3.1. Adsorption isotherm	107

4.2.3.2. Kinetics of sorption	109
4.2.3.3. Study of thermodynamics	109
4.3. Results and discussion	109
4.3.1. Characterization of Amberlite IRA-400(Cl ⁻) resin	109
4.3.1.1. FESEM and EDS Analysis	109
4.3.1.2. XRD Analysis	111
4.3.1.3. FTIR Analysis.....	111
4.3.2. Evaluation of various parameters of adsorption.....	112
4.3.2.1. Influence of pH on sorption of AY 49 and RO 12.....	112
4.3.2.2. Influence of dose of adsorbent on sorption of AY 49 and RO 12.....	113
4.3.2.3. Influence of initiating concentration on sorption of AY 49 and RO 12.....	114
4.3.2.4. Influence of contact time on AY 49 and RO 12 sorption	115
4.3.2.5. Influence of temperature on sorption of AY 49 and RO 12.....	117
4.3.2.6. Langmuir and freundlich isotherm model	118
4.3.2.7. Kinetics of sorption	120
4.3.2.8. Thermodynamics study.....	122
4.4. Conclusions.....	123
4.5. References.....	124

Chapter 5: Transition and Heavy Metal Ions by Using Cerium Amino Tris-(Methylene Phosphonic Acid) (Ce-ATMP).....128 - 164

5.1. Introduction.....	129
5.2. Experimental section.....	130
5.2.1. Distribution coefficient (K _d) study using Ce-ATMP	130
5.2.2. Breakthrough capacity (BTC)	131
5.2.3. Adsorption studies	131
5.2.4. Thermodynamic studies	131
5.2.4.1. Equilibrium time determination.....	131
5.2.4.2. Equilibrium experiments	131
5.2.5. Kinetic studies	131
5.2.6. Elution studies	132
5.2.7. Binary and ternary separation studies	132
5.2.8. Regeneration studies of the Ion exchanger.....	132

5.3. Result and discussion.....	133
5.3.1. Physico-chemical and ion-exchange characteristics	133
5.3.2. Elemental analysis (ICP-AES and CHN analysis).....	134
5.3.3. FESEM-EDS	135
5.3.4. TGA.....	137
5.3.5. XRD	137
5.3.6. FTIR spectrum.....	138
5.3.7. Distribution coefficient (K_d).....	138
5.3.8. Breakthrough capacity (BTC)	140
5.3.9. Adsorption studies	141
5.3.9.1. Contact time and effects of pH	141
5.3.9.2. Adsorption isotherm	142
5.3.9.3. Thermodynamics of ion exchange using Ce-ATMP	146
5.3.9.4. Kinetics study using Ce-ATMP	148
5.3.9.5. Elution of Ce-ATMP.....	151
5.3.9.6. Separations of Ce-ATMP.....	156
5.3.9.7. Binary and ternary separations of Ce-ATMP	156
5.3.9.8. Regeneration studies.....	160
5.4. Conclusions.....	161
5.5. References.....	161

Chapter 6: Removal of Cationic Dyes by using Tin Amino Tris-(Methylene Phosphonic Acid) (Sn-ATMP).....165 - 197

6.1. Introduction	166
6.2. Experimental section.....	168
6.2.1. Materials, methods and characterization.....	168
6.2.2. Adsorption study	168
6.2.3. Adsorption kinetics.....	169
6.2.4. Isotherms of adsorption.....	169
6.2.5. Thermodynamics parameters	170
6.2.6. Desorption/Reusability study	170
6.3. Results and discussion	170
6.3.1. Physicochemical and ion exchange characteristics of Sn-ATMP	170

6.3.2. Instrumental characterization of Sn-ATMP adsorbent	173
6.3.3. Influence of parameters on dye adsorption efficiency	177
6.3.3.1. Effects of the solution's initial pH	177
6.3.3.2. Effects of the adsorbent's dose.....	178
6.3.3.3. Effects of initial dyes concentration	179
6.3.3.4. Effects of contact time	180
6.3.3.5. Effect of temperature	183
6.3.4. Kinetics models	184
6.3.5. Adsorption equilibrium isotherms	187
6.3.5.1. Isotherm of langmuir	187
6.3.5.2. Isotherm of freundlich	189
6.3.6. Adsorption thermodynamic	190
6.3.7. Desorption and reusability of Sn-ATMP	192
6.4. Conclusions.....	194
6.5. References.....	195
Chapter 7: Overall Conclusion.....	198 - 201
7.1. Overall conclusion	199
- List of publications & List of Conference/Webinars/Workshops/.....	202 - 207
- Published Research Articles.....	208 - 209
- Presented Certificates of Conference.....	210 - 213
