

ACKNOWLEDGEMENT

I am profoundly grateful and highly obliged to Dr. N.J. Shrimali for his unwavering guidance, mentorship, and invaluable support throughout the journey of completing this Ph.D. research. Your expertise and dedication have been instrumental in shaping this research and contributing to the field of water resource engineering.

I extend my heartfelt appreciation to Vivek Kapadia, Director of Sardar Sarovar Narmada Nigam Ltd., for sharing the crucial requirements and insights that inspired this research. His vision and encouragement have played a pivotal role in defining the scope and significance of this study.

I would like to express my sincere gratitude to Prof. H.M. Patel sir, for his invaluable assistance in formulating the research problem, defining objectives and providing constant motivation throughout the study. His support has been a source of inspiration and improvement.

A special thanks to the following individuals who played key roles in data collection and providing key information in the field of groundwater engineering. The Regional Directors, WCR, CGWB, Ahmedabad Mr. Sourabh Gupta and Mr. Sanjiv Mehrotra, Scientist at various level Mr. Prakash Gupte, Dr. A.K. Jain, Biswarup Mohapatra, Ramesh Jena, Aalok Sinha for the clarification of precise computations of the recharge estimation. Geologist Mr. Shalad Sir (SWDC) and Superintending Engineer Mr. Jigar Triwadi (SWDC) have provided hydro-geological data.

I am deeply appreciative of the assistance provided by H.R. Shah Sir from Dakshin Gujarat Vij Company Limited (DGVCL) and Gaurang Vahiya from GWRDC for providing lithologs of study area, especially during the challenging times of the Covid season.

I would also like to extend my gratitude to Ms. Margi U Patel from the Gujarat Pollution Control Board (GPCB) for generously sharing valuable data related to the sources and causes of contaminants in groundwater. Furthermore, my sincere thanks go to Vadodara Irrigation Division for providing crucial information on water conservation structures, tanks, and ponds.

Various colleague of Geography and Mathematics departments of The M. S. University of Baroda, Vadodara Mrs. Rolee Kanchan, Dr. Snehal Rao, Amar Mangrola, Pooja Shah, Vishant Shah for their valuable support in software application. I acknowledge my postgraduate students in my research journey, while mentoring them, I have the privilege of continually advancing my

own knowledge regarding the latest developments and practical applications of tools for groundwater analysis.

I am grateful to my colleagues Dr. Nirav Shah and Smt. Aarti Galgale madam for their valuable cooperation and advise while performing laboratory testing for water quality parameters. I can't forget to acknowledge laboratory staff shri Rameshbhai Dodiya and Jigneshbhai Sagar for their support in arranging various equipment for smooth testing process.

I am incredibly fortunate to have the solid support and understanding of my wife Pratiksha Modi and my father Shri A. P. Modi throughout my Ph.D. research journey. Their contribution, both emotional and practical, has been invaluable. Their belief in my aspirations and their encouragement during the challenging moments have provided me with the strength to persevere. Their sacrifices and patience, from handling household responsibilities to offering a listening ear when needed, have allowed me to fully dedicate myself to my studies.

The successful completion of this Ph.D. thesis would not have been possible without the contributions and collaboration of these individuals and organizations.

Once again, I express my deepest gratitude to Dr. N.J. Shrimali for his mentorship and to all those who have been part of this journey, contributing to the knowledge and sustainable management of our precious groundwater resources.

Mukesh A. Modi
