List of Figures

Figure 2-1: Load sharing between single pile and cap (after Akinmusuru,1980) 8

Figure 2-2: Fraction of loads taken by plates and piles for 500mm long piles (after Cao et al., 2004) 10

Figure 2-3: Schematic of test setup (after Lee and Chung, 2005) 11

Figure 2-4: Difference in shaft friction between piles in free standing pile group and piled footing at the settlement of 3 mm or post-yield condition (after Lee and Chung, 2005)..... 11

Figure 2-5: Field large-model tests set up: (a) Test on a free-standing pile group; (b) Test on a piled footing with the cap in contact with soil (after Phuong , 2010)..... 15

Figure 2-6 : Load share between cap and individual piles when the sand density and pile length are 38% and 2.3m respectively (after Phuong , 2010) 16

Figure 2-7: Schematic view of the experimental apparatus (after El Sawwaf , 2010) 16

Figure 2-8 : Variation of average bearing pressures versus maximum settlement for different relative densities of sand (after El Sawwaf , 2010) 16

Figure 2-9 : Piled raft configurations in the centrifuge tests (after Giretti, 2010)..... 20

Figure 2-10 : Variation of load sharing versus raft relative settlement (settlement of piled raft over raft diameter) (after Giretti, 2010) 21

Figure 2-11 : Schematic view of model foundations in the series #2 of centrifuge tests (after Fioravante and Giretti, 2010)..... 21

Figure 2-12 : Variation of raft share versus raft relative stiffness for piled raft with different number of piles and slenderness ratios (after El-Garhy et al., 2013)..... 22

Figure 2-13 Load sharing of a piled raft with different number of piles and also various slenderness ratio (after El-Garhy et al., 2013)..... 22

Figure 2-14 : The proposed empirical curves for estimating the load sharing of non-displacement piled raft in homogeneous sand as the function of W/d_r and S/d_p (after Vakili, 2015) 25

Figure 2-15 : Proposed empirical curves for estimating the load sharing of non-displacement piled raft in layered soil when the raft was founded on loose sand, and $S/d_p=3.5$ (after Vakili, 2015) 26

Figure 2-16 : Proposed empirical curves for estimating the load sharing of non-displacement piled raft in layered soil when the raft was founded on loose sand, and $S/d_p=5.2$ (after Vakili, 2015) 26

Figure 2-17 : Proposed empirical curves for estimating the load sharing of non-displacement piled raft in layered soil when the raft was founded on medium sand, and $S/d_p=3.5$ (after Vakili, 2015)..... 27

Figure 2-18 : Proposed curves for estimating the load sharing of non-displacement piled raft in layered soil when the raft was founded on medium sand, and $S/d_p=5.2$ (after Vakili, 2015) 27

Figure 2-19 : Experimental results with *s/d = 6.67* and *s/d = 3.33* for 13 piled raft (after Jamil et. Al, 2023) 30

Figure 2-20 Numerical results with *s/d = 6.67* and *s/d = 3.33* for 13 piled raft (after Jamil et. Al, 2023)..... 30

Figure 2-21: Simplified representation of a pile-raft unit (after Poulos, 2001)..... 38

Figure 2-22 : Simplified load-settlement curve for preliminary analysis of piled raft foundation (after Poulos, 2001) 38

Figure 2-23 : Typical results from MATHCAD analysis: (a) settlement, (b) factor of safety plotted against number of piles (after Poulos, 2001) 41

Figure 2-24: Definition of problem for an individual column load (after Poulos, 2001) 41

Figure 2-25 : Moment factors A, B for circular column (after Poulos, 2001) 42

Figure 2-26 : Shear factor,cq for circular column (after Poulos, 2001)..... 43

Figure 2-27 : Contact pressure factor, q (after Poulos, 2001) 44

Figure 2-28 : Settlement factor, ω (soil assumed to be homogeneous and very deep) (after Poulos, 2001) 45

Figure 2-29 : Burland's simplified design concept (after Burland, 1995) 49

Figure 2-30 : Effect of pile-raft stiffness ratio on the raft efficiency factor, αr, (after Omeman et al., 2012) 51

Figure 2-31: Effect of pile-raft stiffness ratio on the pile efficiency factor, αp, (after Omeman et al., 2012) 51

Figure 2-32 : Procedure for preliminary design of piled-raft foundations (after Omeman et al., 2012) 52

Figure 2-33: $\alpha pg\alpha ur$ versus $kurkpg$ for loose, medium, and dense sand (after Alsanabani, 2017) 57

Figure 2-34 : Flowchart for the estimation of piled raft settlement (adapted from Bhartiya et al., 2020)..... 58

Figure 2-35 : The considered pile raft configuration in 2D analyses (after Omeman, 2012) . 63

Figure 2-36: Variation of raft share versus pile diameter at a constant load for 5 different piled raft configurations (after Omeman, 2012) 63

Figure 2-37 : The load sharing of single piled raft unit at 600kPa in different slenderness ratio (after Omeman, 2012) 64

Figure 2-38 : Influence of pile spacing on load settlement behaviour (after Sinha, 2013)..... 65

Figure 2-39 : Variation of load sharing versus pile spacing (after Sinha, 2013)..... 66

Figure 2-40 : Sketch of Composite Piled Raft System (after Bhowmik , 2013) 67

Figure 2-41 : Various Configuration of piled raft foundation (after Adel et al., 2014)..... 68

Figure 2-42 : Soil profile, foundation plan and elevation of nineteen story residential tower (after Yamashita et al., 2011) 71

Figure 2-43 : Soil profile, foundation plan and elevation of eleven story base-isolated office building (after Yamashita et al., 2011)..... 72

Figure 2-44 : Soil profile, foundation plan and elevation of Hardon experimental hall (after Yamashita et al., 2011)..... 73

Figure 2-45 : The soil profile and the foundation plan of 47 story residential tower (after Yamashita et al., 2010)..... 74

Figure 2-46 : Variation of vertical displacement versus time (after Yamashita et al., 2010) . 74

Figure 2-47 : Variation of pile share versus pile spacing in piled raft foundation (after Yamashita et al., 2011)..... 75

Figure 2-48 : Project Datum Jelatek in KL, Malaysia (after Phung Duc Long, 2016)..... 77

Figure 2-49 : Conventional pile foundation layout (after Phung Duc Long, 2016) 77

Figure 3-1: Particle Size Distribution Curve of Orsang River Sand and Narmada River Sand (Dry Sieve Analysis Test) 87

Figure 3-2 : Microscopic view of sand particles with 10 x magnification..... 87

Figure 4-1 : Model pile..... 92

Figure 4-2 : Connection of central pile with raft 92

Figure 4-3 : Model piled raft foundation..... 93

Figure 4-4 : Model pile group..... 93

Figure 4-5 : centering of model piled raft using plumb bob 94

Figure 4-6 : Interpretation of load-displacement diagram (after Moshfeghi and Eslami, 2016) 96

Figure 4-7 : Model piles with different *L/d* ratio of piles..... 97

Figure 4-8 : Schematic diagram of Model piles (Hollow circular cross section with close end)..... 97

Figure 4-9 : Model piles with different shape of piles..... 98

Figure 4-10 : Schematic diagram of cross section of Model piles with different shapes 98

Figure 4-11 : Mild steel Plate with different roughness used in direct shear box test to measure the different soil pile friction angle..... 99

Figure 4-12 : Mild steel Plate and model piles with different roughness or soil pile friction angle 99

Figure 4-13 : Model raft of piled raft foundation with spacing between piles = *3d* (Shape of raft = Square; *S=3d*; PG =3 × 3; All dimensions in mm) 102

Figure 4-14 : Model raft of piled raft foundation with spacing between piles = *5d* (Shape of raft = Square; *S = 5d*; PG = 3 × 3; All dimensions in mm) 103

Figure 4-15 : Model raft of piled raft foundation with spacing between piles = *7d* (Shape of raft = Square; *S = 7d*; PG = 3 × 3; All dimensions in mm) 104

Figure 4-16 : Model raft of piled raft foundation with different *L/d* ratio of piles (Shape of raft = Square; *S = 5d*; PG = 3 × 3; *L/d = 10,20,30*; All dimensions in mm) 104

Figure 4-17 : Model raft of piled raft foundation with rectangular raft (Shape of raft = rectangular; *S = 7d*; PG = 3 × 3; *L/d = 30*; All dimensions in mm)..... 105

Figure 4-18 : Model raft of piled raft foundation with circular raft (Shape of raft = circular; *S = 7d*; PG = 3 × 3; *L/d = 30*; All dimensions in mm)..... 105

Figure 4-19 : Model raft of piled raft foundation with square raft (Shape of raft = square; *S = 7d*; PG = 3 ×3; *L/d = 30*; All dimensions in mm)..... 106

Figure 4-20 : Model raft of piled raft foundation with trapezoidal raft (Shape of raft = trapezoidal; *S = 7d*; PG = 3 × 3; *L/d = 30*; All dimensions in mm)..... 106

Figure 4-21 : Model raft of piled raft foundation with different shape of piles (Shape of raft = square; *S = 5d*; PG = 3 × 3; *L = 300* mm; All dimensions in mm)..... 107

Figure 4-22 : Model piled raft for the study of configuration of piles (All dimensions are in mm)..... 108

Figure 4-23 : Configuration of pile with varying length of piles and position of pile..... 109

Figure 4-24 : Experimental set-up 110

Figure 4-25 : Surface vibrator..... 111

Figure 4-26 : Galvanized steel boxes..... 111

Figure 4-27 : Arrangement of density box between piles 111

Figure 4-28 : Compaction frame..... 112

Figure 4-29 : Mild steel compaction frame for compacting the soil between the piles..... 112

Figure 4-30 : Removal of compaction frame after compacting the soil between the piles at topmost layer 112

Figure 4-31 : Removal of raft and compaction frame after compacting the soil between the piles at topmost layer 112

Figure 4-32 : Reconnection of raft with piles..... 112

Figure 4-33 : Earth pressure cells 113

Figure 4-34 : Indicator of earth pressure cells and strain gauges 113

Figure 4-35 : Marking at every 5 cm height on inner side of tank 114

Figure 4-36 : Arrangement of boxes for the determination of densities 114

Figure 4-37 : Experimental setup for load test on pile group 117

Figure 4-38 : Experimental setup for load test on piled raft 117

Figure 4-39 : Output of the numerical analysis 120

Figure 4-40 : Messe - Torhas Building 123

Figure 4-41 : Validation of the present numerical model with numerical results reported by Engine et.al (2009) 123

Figure 4-42 : Comparison of Load –settlement characteristic obtained from present study with Ahmed et al. (2021) 126

Figure 4-43 : Piled raft profile (after ANDRÉ RYLTENIUS) 127

Figure 4-44 : Total displacement for the study 128

Figure 4-45 : comparison of load settlement characteristics of model piled raft from experimental and numerical study (*Square piled raft with 9 piles in Square group: L/d ratio of pile = 30; spacing between piles = 7d; I_d = 60%)* 129

Figure 4-46 : comparison of load settlement characteristics of model piled raft from experimental and numerical study (*Square piled raft with 25 piles in Square group: L/d ratio of pile = 20; spacing between piles = 5d; I_d = 60%*) 129

Figure 4-47 : Various Configuration of pile in square pattern (*S1 – S9*) and circular pattern (*C1- C9*) 132

Figure 4-48 : Load considered in the large piled raft 132

Figure 5-1 Load settlement curve of unpiled raft foundation to define Initial Tangent stiffness of Unpiled raft UPR(kri) and Secant stiffness of Unpiled raft UPR (ksr) 134

Figure 5-2 : Load-settlement characteristics of model piled raft foundation with trapezoidal raft at I_d = 40% 136

Figure 5-3 : Tri- linear Load-settlement characteristics of model piled raft foundation (MPRF) with trapezoidal raft at I_d = 40% 136

Figure 5-4 : Tri- linear Load-settlement characteristics of model piled raft foundation (MPRF), unpiled raft (UPR) with trapezoidal raft and single pile at I_d= 40% 136

Figure 5-5 : Location of EPC and piles in model piled raft foundation (Not to scale, All dimensions are in mm) 139

Figure 5-6 : Location of instrumented piles in MPRF 140

Figure 5-7 : Location of strain gauges in instrumented pile 140

Figure 5-8 : Load settlement characteristics of unpiled raft foundation with different shape of raft *(I_d = 40%)* 143

Figure 5-9 : Load settlement characteristics of unpiled raft foundation with different shape of raft *(I_d = 60%)* 143

Figure 5-10 : Load settlement characteristics of unpiled raft foundation with different shape of raft *(I_d = 80%)* 143

Figure 5-11 : Load settlement characteristics of unpiled raft foundation with square raft *(I_d = 40%, 60% and 80%; size of raft = 240mm × 240mm)* 143

Figure 5-12 : Comparison of load settlement characteristics of square shaped unpiled raft foundation obtained from experimental study and PLAXIS 3D software 144

Figure 5-13 : Ultimate load of unpiled raft foundation (Qur) with different shape of raft and at different relative densities of sand bed 145

Figure 5-14 : Secant stiffness of square shaped unpiled raft from experimental study and proposed equation *(I_d = 40%, 60% and 80%; size of raft = 220 mm × 220 mm)* 149

Figure 5-15 : Secant stiffness of circular shaped unpiled raft from experimental study and proposed equation *(I_d = 40%, 60% and 80%; diameter of raft = 248.3 mm)* 150

Figure 5-16 : comparison of Load calculated from EPC readings and actual applied load vs. relative settlement of unpiled raft foundation *(Square raft, I_d = 60%)* 151

Figure 5-17 : Load settlement characteristics of single pile with different *L/d* ratio in sand *(I_d = 40%; d = 9.7 mm)* 152

Figure 5-18 : Load settlement characteristics of single pile with different *L/d* ratio in sand *(I_d = 60%; d = 9.7 mm)* 152

Figure 5-19 : Load settlement characteristics of single pile with different *L/d* ratio in sand *(I_d = 80%; d = 9.7 mm)* 153

Figure 5-20 : Load settlement characteristics of pile group with different spacing between piles in sand *(L/d ratio of pile=30; I_d = 40%; d = 9.7 mm; Square uare pile group with 3 × 3 pile arrangement)* 153

Figure 5-21: Load settlement characteristics of pile group with different spacing between piles in sand *(L/d ratio of pile = 30; I_d = 60%; d = 9.7 mm; Square pile group with 3 × 3 pile arrangement)* 153

Figure 5-22 : Load settlement characteristics of pile group with different spacing between piles in sand *(L/d ratio of pile = 30; I_d = 80%; d = 9.7 mm; Square pile group with 3 × 3 pile arrangement)* 153

Figure 5-23 : Load settlement characteristics of pile group with different *L/d* ratio of piles in sand *(S = 5d; I_d = 40%; d = 9.7 mm; pile group = 5 × 5)* 155

Figure 5-24 : Load settlement characteristics of pile group with *L/d* ratio of piles in sand *(S = 5d; I_d = 60%; d = 9.7 mm; pile group = 5 × 5)* 155

Figure 5-25 : Load settlement characteristics of pile group with different *L/d* ratio of piles in sand *(S = 5d; I_d = 80%; d = 9.7 mm; pile group = 5 × 5)* 155

Figure 5-26 : Load settlement characteristics of pile group with different shape of piles in sand *(S = 5d; I_d = 40%; pile group = 3 × 3)* 157

Figure 5-27 : Load settlement characteristics of pile group with different shape of piles in sand *(S = 5d; I_d = 60%; pile group = 3 × 3)* 157

Figure 5-28 : Load settlement characteristics of pile group with different shape of piles in sand *(S = 5d; I_d = 80%; pile group = 3 × 3)* 157

Figure 5-29 : Load settlement characteristics of model circular piled raft at different relative density of sand bed *(S = 7d; pile group = 3 × 3)* 165

Figure 5-30 : Load settlement characteristics of model rectangular piled raft at different relative density of sand bed *(S = 7d; pile group = 3 × 3)* 165

Figure 5-31 : Load settlement characteristics of model trapezoidal piled raft at different relative density of sand bed *(S = 7d; pile group = 3 × 3)* 166

Figure 5-32 : Load settlement characteristics of model square piled raft at different relative density of sand bed *(S = 7d; pile group = 3 × 3)* 166

Figure 5-33 : Load settlement characteristics of only pile group, unpiled raft, and piled raft with circular shape of raft at different relative density of sand *(S = 7d; d = 9.7 mm; pile group = 3 × 3)* 167

Figure 5-34 : Load settlement characteristics of only pile group, unpiled raft, and piled raft with rectangular shape of raft at different relative density of sand *(S = 7d; d = 9.7 mm; pile group = 3 × 3)* 167

Figure 5-35 : Load settlement characteristics of only pile group, unpiled raft, and piled raft with trapezoidal shape of raft at different relative density of sand *(S = 7d; d = 9.7 mm; pile group = 3 × 3)* 167

Figure 5-36 : Load settlement characteristics of only pile group, unpiled raft, and piled raft with square shape of raft at different relative density of sand *(S = 7d; d = 9.7 mm; pile group = 3 × 3)* 167

Figure 5-37 : Initial yield load (*IYL*) and Final yield load (*FYL*) of piled raft foundation at different relative density of sand bed *(S = 7d; d = 9.7 mm; pile group = 3 × 3; shape of raft = circular)* 168

Figure 5-38 : Initial yield load (*IYL*) and Final yield load (*FYL*) of piled raft foundation at different relative density of sand bed *(S = 7d; d = 9.7 mm; pile group = 3 × 3; shape of raft = rectangular)* 168

Figure 5-39 : Initial yield load (*IYL*) and Final yield load (*FYL*) of piled raft foundation at different relative density of sand bed *(S = 7d; d = 9.7 mm; pile group = 3 × 3; shape of raft = trapezoidal)* 168

Figure 5-40 : Initial yield load (*IYL*) and Final yield load (*FYL*) of piled raft foundation at different relative density of sand bed *(S = 7d; d = 9.7 mm; pile group = 3 × 3; shape of raft = square)* 168

Figure 5-41 : Contact pressure distribution below unpiled raft for different location of earth pressure cells vs. relative settlement characteristics *(I_d = 40%; shape of raft = circular)* ... 171

Figure 5-42 : Contact pressure distribution below unpiled raft for different location of earth pressure cells vs. relative settlement characteristics *(I_d = 60%; shape of raft = circular)* ... 171

Figure 5-43 : Contact pressure distribution below unpiled raft for different location of earth pressure cells vs. relative settlement characteristics *(I_d = 80%; shape of raft = circular)* ... 172

Figure 5-44 : Contact pressure distribution below raft for different location of earth pressure cells in PRF vs. relative settlement characteristics *(I_d = 40%; S = 7d; L/d ratio of pile = 30; d = 9.7 mm; pile group = 3 × 3; shape of raft = circular)* 172

Figure 5-45 : Contact pressure distribution below raft for different location of earth pressure cells in PRF vs. relative settlement characteristics *(I_d = 60%; S = 7d; L/d ratio of pile = 30; d = 9.7 mm; pile group = 3 × 3; shape of raft = circular)* 172

Figure 5-46 : Contact pressure distribution below raft for different location of earth pressure cells in PRF vs. relative settlement characteristics *(I_d = 80%; S = 7d; L/d ratio of pile = 30; d = 9.7 mm; pile group = 3 × 3; shape of raft = circular)* 172

Figure 5-47 : Contact pressure distribution below unpiled raft for different location of earth pressure cells vs. relative settlement characteristics *(I_d = 40%; shape of raft = rectangular)* 173

Figure 5-48 : Contact pressure distribution below unpiled raft for different location of earth pressure cells vs. relative settlement characteristics *(I_d = 60%; shape of raft = rectangular)* 173
