List of Tables

1.1 Nuclear spectroscopic data for $^{58}\mathrm{Ni}(\mathrm{n},\mathrm{p})^{58}\mathrm{Co}$ and $^{115}\mathrm{In}(\mathrm{n},\mathrm{n}')^{115\mathrm{m}}\mathrm{In}$ reaction cross-section measured experimentally with significance for reactor applications [25]. 9

1.2 Nuclear spectroscopic data for reactions having astrophysical applications investigated theoretically [25]. 10

3.1 Sample details along with their irradiation, cooling, and counting time used in the experiment. 40

3.2 Spectroscopic data used in the present experiment [7]. 40

3.3 Comprehensive data set of the various parameters used in the detector calibration and analysis of the HPGe detector's efficiency measurement. 42

3.4 Correction factors ($\mathrm{N_{corr}}$ and $\mathrm{G_{self}}$) applied to the measured cross-sections. 44

3.5 IRDFF-II [26] spectrum averaged neutron monitor cross-sections (σ_{k}) along with fractional uncertainties and correlation coefficients and EPEN code computed fractional neutron flux for each neutron energy group. 46

3.6 Neutron spectrum averaged monitor cross-section along with its uncertainty and correlation coefficients. 47

3.7 Comparison of experimental conditions and different corrections for some of the recent $^{58}\mathrm{Ni}(\mathrm{n},\mathrm{p})^{58}\mathrm{Co}$ reaction cross-section [13]. . 49

3.8 Details regarding the irradiation employed in the current experiment. 53

3.9 Nuclear spectroscopic data utilized in the present experiment [7]. 54

3.10 Comparison of experimentally determined cross-section of $^{115}\mathrm{In}(\mathrm{n},\mathrm{n}')^{115\mathrm{m}}\mathrm{In}$ reaction with the best fit ldmodel (LD-2) of TALYS [14]. 56

3.11 Correlation matrix for the measured reaction cross-sections. . . . 56

3.12 Comparison of experimental conditions for $^{115}\mathrm{In}(\mathrm{n},\mathrm{n}')^{115\mathrm{m}}\mathrm{In}$ system[13]. 58

4.1 Systematic formulas proposed by different authors for (n, p) reactions. 75

4.2 Systematic formulas proposed by different authors for (n,α) reactions. 76

4.3 Systematic formulas proposed by different authors for (n, 2n) reactions. 77
4.4 Fitting parameters for (n, p), (n, α) and (n, 2n) reactions. 78
4.5 The cross-sections for the (n, p) reaction on Ni isotopes calculated by utilizing the systematic formulas provided in the Table 4.1. . . 80
4.6 The cross-sections for the (n, α) reaction on Ni isotopes calculated by utilizing the systematic formulas provided in the Table 4.2. . . 80
4.7 The cross-sections for the $(n, 2n)$ reaction on Ni isotopes calculated by utilizing the systematic formulas provided in the Table 4.3. . . 80

5.1 Details of proton OMP parameters used in the present work, along with their corresponding values for Z=42 and A=92, and the associated percentage uncertainties [18, 19]. 96
5.2 Details NLD parameters and their associated percentage uncertainties used in the present work for Z=42 and A=92 [18, 19]. . . . 97

1 Comparison of measured (n, p) reaction cross-sections at 14.5 MeV for nuclei with Z $\leq$ 45, including data from this study and previous literature. 114
2 Comparison of measured (n, p) reaction cross-sections at 14.5 MeV for nuclei with Z $>$ 45, including data from this study and previous literature. 115
3 Comparison of measured (n, α) reaction cross sections at 14.5 MeV for 26 $\leq$A$\leq$ 181, including data from this study and previous literature. 116
4 Comparison of measured (n, 2n) reaction cross-sections at 14.5 MeV for even-A nuclei, including data from this study and previous literature. 117
5 Comparison of measured (n, 2n) reaction cross-sections at 14.5 MeV for odd-A nuclei, including data from this study and previous literature. 118
