ABSTRACT	1
Chapter 1: Introduction and review of literature	5
1.1 <i>Klebsiella pneumoniae</i>	6
1.2 Antibiotic resistance.....	8
1.2.1 Mechanism of antibiotic resistance	10
1.3 Genomics of antibiotics resistance in <i>Klebsiella pneumoniae</i>	12
1.3.1 Multi-Locus Sequence Typing (MLST).....	13
1.3.2 Genes involved in antibiotic resistance in <i>K. pneumoniae</i>	15
1.3.3 Plasmid diversity and mediated resistant in <i>Klebsiella pneumoniae</i>	19
1.3.4 Prophages and their influence on AMR and pathogenicity	21
1.4 Virulence factors and associated genes in <i>K. pneumoniae</i>	22
1.4.1 Capsule	30
1.4.2 Lipopolysaccharides (LPS).....	32
1.4.3 Siderophores	32
1.4.4 Type 3 Fimbriae.....	34
Chapter 2: Rationale and Objectives	35
Chapter 3: Sample collection, identification, screening of antibiotic resistant (ABR) isolates, and whole genome sequencing	38
3.1 Introduction:	39
3.2 Materials and methods	41
3.2.1 Collection of clinical samples of <i>K. pneumoniae</i>	41
3.2.2 Sample Identification.....	41
3.2.3 Screening of Antibiotic resistance isolates.	43
3.2.4 Isolate categorization based on resistance patterns.	44
3.2.5. Whole genome sequencing ($n = 30$) isolates of all categories (Susceptible, MDR, XDR, and PDR).	45
3.3 Results:	46

3.3.1 Sample collection and Identification	46
3.4 Discussion:	59
Chapter 4: Genotypic and phenotypic study of antibiotic resistance in <i>K. pneumoniae</i>.....	65
4.1 Introduction	66
4.2 Materials and methodology	70
4.2.1 Pan-India <i>K. pneumoniae</i> genome data retrieval.....	70
4.2.2 Multi-locus Sequence Typing.....	71
4.2.3 Screening for antimicrobial resistance genes and detecting their location.....	71
4.2.4 Screening of plasmid replicons.....	71
4.2.5 Detection of prophages in <i>K. pneumoniae</i> genomes (Laboratory isolates).....	72
4.2.6 Generation of a phylogenetic tree based on SNPs using WGS data	72
4.2.7 Biofilm assay and categorization of Isolates	72
4.2.8 Isolate selection, Prophage Induction, and its effect on Biofilm formation	73
4.3 Results	75
4.3.1 Meta-data of retrieved genomes	75
4.3.2 Multi-locus sequence typing of isolates	77
4.3.3 Detection and distribution of beta-lactamase genes among isolates.	81
4.3.4 Distribution of plasmid replicons among dominant sequence types	87
4.3.5 Investigation of the genotypic and phenotypic connection of Carbapenem resistance in selected isolates.	88
4.3.6 Genomic study of the total resistance in lab isolates.....	94
4.3.7 Investigating the dynamics of prophages and their impact on the formation of biofilms in <i>Klebsiella pneumoniae</i>	100
4.4. Discussion	109
Chapter 5: Genotypic and phenotypic study of virulence factors in <i>K. pneumoniae</i>	119
5.1 Introduction	120
5.2 Materials and methodology	123
5.2.1 Pan-India <i>K. pneumoniae</i> genome data retrieval to study of virulence factors	123
5.2.2 Bioinformatics analysis to detect Sequence types (STs), K-types, and O-types, and Virulence genes	123
5.2.3 Generation of a phylogenetic tree based on SNPs using WGS data	124
5.2.4 Selection of isolates for phenotypic study of Capsule and lipopolysaccharides	124
5.2.5. Qualitative and Quantitative detection of siderophore	127

5.3 Results	130
5.3.1 Overall summary of ST, K- and O-locus, and virulence genes among genomes.	130
5.3.2 Correlation of major prevalent STs with K-type, O-type, and Virulence genes among <i>K. pneumoniae</i> genomes ($n = 351$).....	133
5.3.3 String Test.....	137
5.3.4 Capsule staining and capsule size determination	138
5.3.6 Phagocytosis assay	141
5.3.7 Serum Killing Assay.....	142
5.3.8 Qualitative detection of Siderophore:.....	146
5.3.9 Quantitative detection of siderophore:	147
5.3.10 Study on effect of iron and iron chelator and antibiotics on %siderophore production	148
5.4 Discussion	152
Summary	164
Conclusion	175
Appendices	179
