

List of Tables

Table 1.1 Genes associated with antibiotic resistance in <i>Klebsiella pneumoniae</i>	16
Table 1.2 List of important carbapenemase and ESBLs genes and associated plasmid replicons	20
Table 1.3 Distinctive features of classical <i>K. pneumoniae</i> (cKP), hypervirulent <i>K. pneumoniae</i> (HvKP), and Hypervirulent carbapenem-resistant <i>K. pneumoniae</i> (Hv-CRKp) or carbapenem-resistant hypervirulent <i>K. pneumoniae</i> (CR-HvKp).....	26
Table 3.1 Classification of antimicrobial agents and antibiotics used for drug susceptibility testing.	45
Table 3.2 Colony characteristics of all clinical isolates	48
Table 3.3 Result of the NCBI BLAST of the 16s rRNA gene sequence obtained from sanger sequencing.....	50
Table 3.4 Antibiotic susceptibility profile and categorization of isolates ($n = 30$)	52
Table 3.5 MIC value (ug/ml) of colistin and tigecycline.	53
Table 3.6 Quality assessment and genome annotation of whole genome sequencing data of all isolates ($n = 30$)......	57
Table 4.1 Illustrates the dispersion of alleles and sequence type in lab isolates ($n = 29$)	78
Table 4.2 List of known carbapenemase genes, mutations, or loss of porins, and efflux pumps related to carbapenem resistance.	89
Table 4.3 Docking results of meropenem and ertapenem with NDM-1, NDM-5, OXA-181, and OXA-232.....	92
Table 5.1 <i>K. pneumoniae</i> isolates selected for the phenotypic study of capsule and lipopolysaccharide.....	125
Table 8.1 List of prophages identified in the genomes of <i>K. pneumoniae</i>	180
