

## List of Figures

Figure 1.1 Representative image of isolate M50 shows the circular genome of <i>K. pneumoniae</i> ..	7
Figure 1.2 Pie chart displaying the present count of worldwide fatalities caused by antimicrobial-resistant infections, as well as the projected number of deaths due to such infections in 2050.....	8
Figure 1.3 Timeline of the discovery of antibiotics and the subsequent identification of antibiotic resistance. ....	10
Figure 1.4 Methods of intrinsic resistance seen in Gram-negative bacteria.. ....	11
Figure 1.5 Illustration of the five primary mechanisms of antibiotic resistance in Gram-negative bacteria. ....	12
Figure 1.6 Hypervirulent and multidrug-resistant <i>K. pneumoniae</i> clones. ....	15
Figure 1.7 Complete set of drug resistance genes detected in genome of representative isolate M50.....	18
Figure 1.8 Overview of <i>Klebsiella pneumoniae</i> pathogenicity and host cell reaction. ....	24
Figure 3.1 Representastive images of isolates of <i>K. pneumoniae</i> grown on MacConkey agar plates.....	47
Figure 3.2 Genomic DNA obtained from the representative clinical isolates. ....	48
Figure 3.3 The 1% agarose gel electrophoresis shows discrete bands of PCR amplified <i>16S rRNA</i> gene.....	49
Figure 3.4 Distribution of isolates concerning drug susceptibilty patterns against different antibiotics.....	54
Figure 3.5 Categorization of isolates in Susceptible, MDR, XDR, and PDR.....	55
Figure 3.6 Comparison of drug resistance pattern between isolates of 2016-17 and 2020..	56
Figure 4.1 Diagrammatic representation of prophage induction.....	74
Figure 4.2 Distribution of whole genome sequenced isolates from several states in India. .	75
Figure 4.3 Segmentation of isolates according to the place of infection or source of isolation..	76
Figure 4.4 Shows the distribution of sample types.....	77
Figure 4. 5 Distribution of isolates among different sequence types identified in India. ....	79
Figure 4.6 The geographical distribution of the genome collection and the distribution of sequence types in India.....	80
Figure 4.7 Proportionate allocation of $\beta$ -lactamase genes among different strains.....	81
Figure 4.8 Distribution of carbapenemase genes circulating in India. ....	83
Figure 4.9 $\beta$ -lactamases and the plasmid replicons present in <i>K. pneumoniae</i> genomes from India. ....	84
Figure 4.10 Heatmap illustrating the percentage distribution of plasmid replicons among different sequence types (STs). ....	88
Figure 4.11 Minimum inhibitory Concentration of <i>K. pneumoniae</i> against carbapenem drugs..	91

Figure 4.12 Two-dimensional figure showing the interaction of meropenem with carbapenem resistant proteins.....	93
Figure 4.13 A 2D interaction diagram illustrates the docking of ertapenem with carbapenem resistant proteins.....	94
Figure 4.14 Total antibiotic resistance gene profile for different classes of antibiotics in lab isolates ( $n = 29$ ).....	95
Figure 4.15 Alignment of amino acid sequence of PmrB protein.....	97
Figure 4.16 Disruption of the <i>rmrR</i> gene in isolate M49.....	98
Figure 4.17 Study of mutation in sequence of ramR protein.....	99
Figure 4.18 Circular genome of a representative strain (M53) with the prophages.....	100
Figure 4.19 Biofilm category of laboratory isolates and the presence of prophage elements in the genomes of clinical isolates of <i>K. pneumoniae</i> from the laboratory ( $n = 27$ ).....	102
Figure 4.20 Classification of isolates according to their biofilm formation capability.....	103
Figure 4.21 Growth curve of representative isolates in presence of mitomycin C.....	104
Figure 4.22 Image of isolates M53, M55, M36, M2, M10, M52, M57, and DJ tested for prophage induction.....	107
Figure 4.23 Impact of prophage induction on biofilm.....	108
Figure 5.1 Representative image of the FITC-labeled isolate M51 under 100x magnification.....	126
Figure 5.2 Dispersion of sequence types throughout the genomes of <i>K. pneumoniae</i> . ....	130
Figure 5.3 Distribution of K-types across <i>K. pneumoniae</i> 's genomes.....	131
Figure 5.4 Shows the distribution of O-serotypes across <i>K. pneumoniae</i> 's genomes.....	131
Figure 5.5 A complete genetic profile of the virulence of <i>K. pneumoniae</i> genomes from India.....	132
Figure 5.6 Percentage distribution of virulence genes across various combinations of prevalent STs (K-types, O-types).....	134
Figure 5.7 String test.....	138
Figure 5.8 Capsule staining.....	138
Figure 5.9 Graphical depiction of the size (in $\mu\text{m}$ ) of chosen isolates' capsules.....	139
Figure 5.10 Graphical depiction of varying amounts of mucoviscosity seen in selected isolates.....	140
Figure 5.11 FACS data analysis.....	142
Figure 5.12 Serum killing assay results for the representative isolates M57, M48, and M51.....	143
Figure 5.13 Overall genetic makeup of laboratory isolates ( $n = 29$ ).....	145
Figure 5.14 Representative pictures of isolates showing production of siderophore on CAS agar medium.....	146
Figure 5.15 Illustrates the percentage of siderophore synthesis by different isolates.....	147
Figure 5.16 Growth and the percentage of siderophore formation in presence of iron and DIP.....	149
Figure 5.17 Displays the growth and percentage of siderophore production in presence of antibiotics.....	151
