ACKNOWLEDGEMENT	IV
ABSTRACT	V
CONTENTS	1
LIST OF FIGURES	X
LIST OF TABLES	XVII
NOMANCLATURE	XVII

CONTENT

Chapter No.	Content	Page No.
1.	INTRODUCTION	1-10
	1.1 Introduction	1
	1.2 Common Rail Direct Injection System (CRDI)	1
	1.2.1 Fuel Injector nozzle	2
	1.3 Cavitation in the Fuel injector nozzle	4
	1.4 Fundamental of Spray break-up	5
	1.5 Cavitation induced spray breakup	7
	1.6 Bio-diesel	7
	1.6.1 Cavitation assisted Bio-diesel production	8
	1.7 Organization of thesis	9
2.	LITERATURE REVIEW	11-33
	2.1 Introduction	11
	2.2 Experimental study on cavitation flow	11
	2.3 Computational study on cavitation flow	17
	2.3.1 One-dimensional modelling of cavitation flow	17
	2.3.2 Multi-dimensional modelling of cavitation flow	18
	2.3.2.1. <i>Bubble Dynamics</i>	19
	2.3.2.2 <i>Cavitation modelling</i>	20
	2.4 Influence of cavitation flow on spray characteristics	24
	2.4.1 Cavitation coupled spray model	26
	2.4.2 Experimental study on cavitation-induced spray breakup	27
	2.5 Vortex induced cavitation	28
	2.6 Cavitation assisted Bio-diesel production	31

2.7	Research gap	32
2.8	Research objective	32
2.9	Expected outcomes	33
3.	NUMERICAL AND EXPERIMENTAL METHODOLOGY	34-52
3.1	Numerical modelling of cavitation	34
3.2	Numerical modelling of spray breakup	36
	3.2.1 Discrete phase model (DPM)	36
	3.2.2 Spray breakup model	37
3.3	Two-step coupling method	39
3.4	Experimental apparatus for cavitation	42
	3.4.1 Development of nozzle	42
	3.4.2 Experimental conditions	46
3.5	Experimental apparatus for spray characteristics	48
	3.5.1 Image processing methods	49
3.6	Biodiesel production from Waste cooking Oil	51
3.7	Closer	52
4.	VALIDATION OF NUMERICAL AND EXPERIMENTAL WORK	53-86
4.1	Validation of cavitation model	53
	4.1.1 Winklhofer geometry detail	53
	4.1.2 Grid Generation	54
	4.1.3 Numerical setup	55
	4.1.4 Initial validation	56
	4.1.5 Assessment of Turbulence model	58
	4.1.6 Assessment of Cavitation Model	59
	4.1.7 Assessment of Multi-phase model & Interface modelling	60
	4.1.8 Summary of numerical modelling of cavitation flow	62
	4.1.9 Transient Simulation	63
4.2	Validation of spray model	63
	4.2.1 Computational domain & Boundary condition	64
	4.2.2 Effect of mesh size	64
	4.2.3 Effect of the Spray breakup model	65

4.3	Validation of Two-step coupling method	66
4.3.1	ECN Spray C Fuel Injector nozzle	66
4.3.2	Geometry and Mesh for internal nozzle flow	68
4.3.3	Geometry and Mesh for spray formation	70
4.3.4	Initial and boundary condition	70
4.3.5	Validation for ECN spray-C results	72
4.4	Experimental work for cavitation	72
4.4.1	Validation of results	74
4.4.2	Observation table	75
4.4.3	Uncertainty analysis	81
4.5	Experimental work for Spray	84
4.5.1	Validation of spray tip penetration	85
4.6	WCO Biodiesel production	86
4.6.1	Cavitation reactor	86
4.6.2	Biodiesel Production process	86
5.	RESULTS AND DISCUSSION	90-142
5.1	Results of Winklhofer nozzle	90
5.1.1	Effect of Pressure difference	90
5.1.2	Effect of nozzle geometry	93
5.1.3	Effect of fuel properties	94
5.2	Results of ECN spray c injector	95
5.2.1	CASE-1 (ECN Spray 210037 C)	96
5.2.2	CASE-2 (ECN Spray 210003 C)	102
5.3	Experimental Results of Scaled-up Nozzle	115
5.3.1	Results of cavitation nozzle 3 (CN 3)	115
5.3.2	Results of cavitation nozzle 4 (CN 4)	122
5.3.3	Results of cavitation nozzle 5 (CN 5)	125
5.4	Experimental Results of spray characteristics	133
5.4.1	Spray development	134
5.4.2	Spray tip penetration (STP)	134
5.4.4	Spray cone angle (SCA)	138
5.5	Outcome of the current research	139

6.	CONCLUSIONS AND SCOPE OF FUTURE WORK	143-147
6.1	Conclusions	143
6.1.1	Cavitation flow modelling	143
6.1.2	Spray break-up modelling	144
6.1.3	Two-step coupling method	144
6.1.4	Experiments for cavitation flow	144
6.1.5	Experiments for spray characteristics	145
6.1.6	Cavitation induced spray breakup	146
6.2	Major ‘outcomes	146
6.3	Scope of Future work	147
