

List of Tables

Table Number	Table Description	Page No
2.1	Gradation of ASTM grade carbon black.	23
3.1	Gradation of natural rubber and properties of the same	44
3.2	Characteristics of TDAE process oil	49
4.1	Carbon black Characterization	76
4.2	Rubber Formulation (unit: Phr)	79
4.3	Curing and processing characteristics of rubber compounds.	80
4.4	Rubber process analysis of rubber compounds	84
4.5	Tensile properties of rubber compounds	88
4.6	Carbon black parameters of Sy-1, Sy-2, Sy-3 and Sy-4	91
4.7	Formulation of rubber compounds	96
4.8	Rheological characteristics of carbon black	97
4.9	Mechanical properties of rubber compounds	101
5.1	Carbon black characteristics	107
5.2	Aggregate size distribution parameters of carbon black	109
5.3	Processing and Curing characteristics of rubber compounds	113
5.4	Shear modulus of rubber compound at different strain and Payne effect of rubber compounds.	116
5.5	R-square value of tan delta vs aggregate size distribution coefficient parameters with different value of n, a, and b	122

6.1	Carbon black properties	138
6.2	Colloidal parameters of carbon black with different ozone treatment time	142
6.3	Rubber compounding Formulation.	144
6.4	Curing characteristics of the compounds	145
6.5	Rubber process analysis and Payne effect of rubber compounds	150
6.6	Dynamic Mechanical Properties of Rubber Compounds.	155
7.1	Properties of Carbon black	167
7.2	Rubber compound formulation	171
7.3	Curing characteristics of rubber compounds	172
7.4	Quantitative Data of AFM Topography	175
7.5	Shear modulus and Payne effect of rubber compounds	178
7.6	Formulation of rubber compound with different filler loading	184
7.7	Shear modulus of rubber compound at different strain amplitude and Payne effect of same	186
7.8	Mechanical properties of rubber compounds	188
7.9	Dynamic Mechanical Analysis of Compounds at 60°C	190
