

Contents

Chapter 1 : General Introduction	1-26
1.1: Nanomaterials	2
1.2: Metal Nanoparticles (MNPs)	3
1.3: Synthesis of MNPs	5
1.4: Polymer mediated MNPs	7
1.5: Pluronic mediated MNPs	12
1.6: References	18
Chapter 2 : Materials and characterization methods	27-40
2.1: Materials	28
2.1.1: Pluronic Polymers	28
2.1.2: Chitosan (Ch)	29
2.1.3: Ascorbic acid (AA)	30
2.1.4: Peanut shells (PS)	31
2.1.5: Organic dyes	31
2.1.5.1: Congo red (CR)	31
2.1.5.2: Methyl Orange (MO)	32
2.1.5.3: Methylene Blue (MB)	33
2.1.5.4: Rhodamine B (RhB)	33
2.1.6: Other materials used in the synthesis of MNPs	34
2.2: Characterization Methods	35
2.2.1: UV-Visible spectroscopy (UV-VIS)	35
2.2.2: Fluorescence spectroscopy (FL)	35
2.2.3: Dynamic light scattering (DLS) and Zeta potential (Zeta)	35
2.2.4: X-ray diffraction (XRD)	35
2.2.5: Field-emission scanning electron microscopy (FE-SEM) and Energy dispersive X-ray spectroscopy (EDX)	36
2.2.6: Transmission electron microscopy (TEM)	36
2.2.7: Fourier transform infrared spectroscopy (FTIR)	37
2.2.8: Thermogravimetric analysis (TGA)	37

2.2.9: Specific surface area and pore distribution	37
2.3: References	38
Chapter 3: Pluronic mediated copper nanoparticles for antimicrobial applications: Investigating the role of Pluronic concentration	41-62
3.1: Introduction	42
3.2: Experimental section	45
3.2.1: Synthesis of CuNPs	45
3.2.2: Synthesis of Pluronic F127 mediated CuNPs	45
3.2.3: In-vitro antimicrobial activity study	46
3.3: Results and discussion	48
3.3.1: Characterization of colloidal Pluronic F127 mediated CuNPs solution	49
3.3.1.1: UV-Visible spectral analysis	49
3.3.1.2: Analysis of DLS and Zeta potential	50
3.3.2: Solid state characterization of F127 mediated CuNPs	51
3.3.2.1 : X-ray diffraction analysis	51
3.3.2.2: FE-SEM and EDX analysis	53
3.3.3: Antimicrobial activity of Pluronic F127 mediated CuNPs	54
3.3.3.1: Antibacterial activity	54
3.3.3.2: Antifungal activity	56
3.4: References	58
Chapter 4: Pluronic mediated copper nanoparticles as photocatalyst for dye degradation	63-104
4.1: Introduction	64
4.2: Experimental section	68
4.2.1: Fabrication of the blank CuNPs and Pluronic mediated CuNPs	68
4.2.2: Photocatalytic organic dye degradation studies	69
4.3: Results and discussion	71
4.3.1: Characterization of the blank CuNPs and Pluronic mediated CuNPs	71
4.3.1.1: Optical characterization of the CuNPs dispersions	71
4.3.1.2: Structural characterization of the CuNPs dispersions	76
4.3.1.3: Solid state characterization	79

4.3.2: Photocatalytic activity of the blank CuNPs and Pluronic mediated CuNPs	84
4.4: References	95
Chapter 5: Pluronic mediated silica nanoparticles with chitosan as composite for gas adsorption	105-127
5.1: Introduction	106
5.2: Experimental section	108
5.2.1: Preparation of Pluronic mediated SiO ₂ NPs using peanut shell ash (PSA)	108
5.2.2: Preparation of Chitosan-modified SiO ₂ NPs (Ch/SiO ₂ NPs)	108
5.2.3: Gas adsorption study	109
5.3. Results and Discussion	111
5.3.1: Structural and chemical properties of PSA and Pluronic mediated SiO ₂ NPs	111
5.3.2: Characterization of Chitosan-modified SiO ₂ NPs (Ch/SiO ₂ NPs)	114
5.3.3: Gas adsorption study of Ch/SiO ₂ NPs biosorbents	118
5.3.3.1: Influence of Chitosan content on SiO ₂ NPs in Ch/SiO ₂ NPs biosorbents	118
5.3.3.2: Adsorption of CO ₂ , CH ₄ , and N ₂ gases on Ch/SiO ₂ NPs biosorbent	120
5.4: References	123
Chapter 6: Pluronic mediated silica nanoparticles with chitosan as composite for the dye removal	128-139
6.1: Preparation of Pluronic mediated SiO₂NPs using peanut shell ash (PSA)	129
6.2: Preparation of Chitosan-modified SiO₂NPs (Ch/SiO₂NPs)	129
6.3: Dye removal study	129
6.4: Results and discussion	131
6.4.1: Characterization of Pluronic mediated SiO ₂ NPs and Chitosan-modified SiO ₂ NPs (Ch/SiO ₂ NPs)	131
6.4.2: CR dye removal	131
6.5: References	138
Chapter 7: Summary and Conclusions	140-147
List of Publications	148-149
List of Presentations	150-151
